SCIENCE AND DISSENT CHINA (cl) H. Lyman Miller, 1996 The main conclusion of this book is that emergence of a renewed liberal voice in China's political arena in the 1980s was in significant part a natural extension of what some scientists believed to be the norms of healthy science into politics

Science and Dissent in Post-Mao China H. Lyman Miller, 1996 When in 1989 Chinese astrophysicist Fang Lizhi sought asylum for months in the U S Embassy in Beijing later escaping to the West worldwide attention focused on the plight of liberal intellectuals in China In *Science and Dissent in Post Mao China* H Lyman Miller examines the scientific community in China and prominent members such as Fang and physicist and historian of science Xu Liangying Drawing on Chinese academic journals newspapers interviews and correspondence with Chinese scientists he considers the evolution of China's science policy and its impact on China's scientific community He illuminates the professional and humanistic values that impelled scientific intellectuals on their course toward open liberal political dissent It is ironic that scientific dissidence in China arose in opposition to a regime supportive of and initially supported by scientists In the late 1970s scientists were called upon to help implement reforms orchestrated by Deng Xiaoping's regime which attached a high priority to science and technology The regime worked to rebuild China's civilian science community and sought to enhance the standing of scientists while at the same time it continued to oppose political pluralism and suppress dissidence The political philosophy of revolutionary China has taught generations of scientists that explanation of the entire natural world from subatomic particles to galaxies falls under the jurisdiction of natural dialectics a branch of Marxism Leninism Escalating debates in the 1980s questioned the relationship of Marxism to science and led some to positions of open political dissent At issue were the autonomy of China's scientific community and the conduct of science as well as the validity and jurisdiction of Marxist Leninist philosophy and hence the fundamental legitimacy of the political system itself Miller concludes that the emergence of a renewed liberal voice in China in the 1980s was in significant part an extension into politics of what some scientists believed to be the norms of healthy science scientific dissidence was an unintended but natural consequence of the Deng regime's reforms This thoughtful study of science as a powerful belief system and as a source of political and social values in contemporary China will appeal to a diverse audience including readers interested in Chinese politics and society comparative politics communist regimes the political sociology of science and the history of ideas

Knowledge Production in Mao-Era China Rui Kunze, Marc Andre Matten, 2021-10-15 This book traces and analyzes the transformation of the public discourse of science and technology in Mao era China Based on extensive primary sources such as science dissemination materials and technical handbooks as well as mass media products of the Great Leap Forward and the Cultural Revolution periods this book delineates the emergence of a pragmatic approach to knowledge in society To achieve the goal of fast modernization with limited financial human and material resources the party state accommodated Western and local modern and traditional knowledges in the fields of agricultural mechanization

steel production and Chinese veterinary medicine The case studies demonstrate that scientific knowledge production in the Mao era included various social groups and was entangled with political and cultural issues This reveals and explains the continuity of scientific thinking across the historical divides of 1949 and 1978 which has hitherto been underestimated

*Science Studies during the Cold War and Beyond* Elena Aronova, Simone Turchetti, 2016-09-24 This book examines the ways in which studies of science intertwined with Cold War politics in both familiar and less familiar battlefields of the Cold War Taken together the essays highlight two primary roles for science studies as a new field of expertise institutionalized during the Cold War in different political regimes Firstly science studies played a political role in cultural Cold War in sustaining as well as destabilizing political ideologies in different political and national contexts Secondly it was an

instrument of science policies in the early Cold War the studies of science were promoted as the underpinning for the national policies framed with regard to both global geopolitics and local national priorities As this book demonstrates however the wider we cast our net extending our histories beyond the more researched developments in the Anglophone West the more complex and ambivalent both the science studies and the Cold War become outside these more familiar spaces The national stories collected in this book may appear incommensurable with what we know as science studies today but these stories present a vantage point from which to pluralize some of the visions that were constitutive to the construction of Cold War as a juxtaposition of the liberal democracies in the West and the communist East     **Encyclopedia of the Developing World** Thomas M. Munro, 2020-06-01 How have traditional Chinese ways of thinking affected problem solving in this century The traditional imperial style of inquiry is associated with the belief that the universe is a coherent internally structured unity understandable through the similarly structured human mind It involves a reliance on antecedent and authoritarian models coupled with an introspective focus in investigations at some cost to objective fact gathering In contrast emergent forms of inquiry are guided by the values of individual autonomy and new perspectives on objectivity In the 1930s and 1940s some liberal educators held the model of Western science in great esteem and some scientists practicing objective inquiry helped to create an awareness in the urban areas of inquiry not directed by political values Drawing on philosophical social science and popular culture materials Donald Munro shows that the two strains coexisted in twentieth century China as mixed motives Many important figures were

motivated by a desire to act consistently with the social values associated with the premodern or received view of knowledge and inquiry At the same time these people often had other motives such as utilitarian values efficiency and entrepreneurship Munro argues that while many competing positions can coexist in the same person the seeds of the positive instrumental value of individual autonomy in Chinese inquiry are beginning to compete in both scholarly and popular culture with other older approaches

**Courting Science** Damon V. Coletta, 2016-05-25 In *Courting Science* Damon Coletta offers a novel explanation for the decline of American leadership in world affairs Whether the American Century ends sooner rather than later may depend on America's capacity for self reflection and ultimately self restraint when it comes to science technology and engineering Democracy's affinity for advanced technology has to be balanced against scientific research and progress as a global enterprise In an era of rising challengers to America's lead in the international order and an increasingly globalized civil society a Scientific State has a better chance of extending its dominance In order to draw closer to this ideal though the United States will have to reconsider its grand strategy It must have a strategy that scrutinizes how tightly it constrains how narrowly it directs and how far it trusts American scientists If given the opportunity scientists have the potential to lead a second American Century through domestic science and technology policy international diplomacy and transnational networks for global governance
