

An aerial view of a sustainable community model. The landscape is filled with numerous orange, dome-shaped structures, likely biomes or greenhouses, arranged in a grid-like pattern. These structures are interspersed with lush green trees and vegetation. In the center, a large, multi-level structure with a complex orange framework is visible, possibly a central hub or a large-scale agricultural facility. The overall scene suggests a highly organized and eco-friendly urban or agricultural development.

Science And Ecosystem Management:

Science and Ecosystem Management in the National Parks William L. Halvorson, Gary E. Davis, 2023-01-10 Our national parks are more than mere recreational destinations. They are repositories of the nation's biological diversity and contain some of the last ecosystem remnants needed as standards to set reasonable goals for sustainable development throughout the land. Nevertheless, public pressure for recreation has largely precluded adequate research and resource monitoring in national parks, and ignorance of ecosystem structure and function in parks has led to costly mistakes such as predator control and fire suppression that continue to threaten parks today. This volume demonstrates the value of ecological knowledge in protecting parks and shows how modest investments in knowledge of park ecosystems can pay handsome dividends. *Science and Ecosystem Management in the National Parks* presents twelve case studies of long-term research conducted in and around national parks that address major natural resource issues. These cases demonstrate how the use of longer time scales strongly influence our understanding of ecosystems and how interpretations of short-term patterns in nature often change when viewed in the context of long-term data sets. Most importantly, they show conclusively that scientific research significantly reduces uncertainty and improves resource management decisions. Chosen by scientists and senior park managers, the cases offer a broad range of topics including air quality at Grand Canyon, interaction between moose and wolf populations on Isle Royale, control of exotic species in Hawaiian parks, simulation of natural fire in the parks of the Sierra Nevada, and the impact of urban expansion on Saguaro National Monument. Because national parks are increasingly beset with conflicting views of their management, the need for knowledge of park ecosystems becomes even more critical, not only for the parks themselves but for what they can tell us about survival in the rest of our world. This book demonstrates to policymakers and managers that decisions based on knowledge of ecosystems are more enduring and cost-effective than decisions derived from uninformed consensus. It also provides scientists with models for designing research to meet threats to our most precious natural resources. If we can learn to save the parks, observe Halvorson and Davis, perhaps we can learn to save the world.

Keeton, Toral Patel-Weynand, Evie Witten, 2013-12-01 Ecosystem management has gained widespread visibility as an approach to the management of land to achieve sustainable natural resource use. Despite widespread interest in this emerging management paradigm, *Ecosystems: Balancing Science with Management* is the first book to directly propose approaches for implementing ecosystem management, give examples of viable tools, and discuss the potential implications of implementing an ecosystem approach. These ideas are framed in a historical context that examines the disjunction between ecological theory, environmental legislation, and natural resources management. *Integrating Social Science and Ecosystem Management*, 1997 *Ecosystems Management* Soden, 1998

Futures Initiative, 2012-05-04 Natural environments provide enormously valuable but largely unappreciated services that aid humans and other earthlings. It is becoming clear that these life support systems are faltering and failing worldwide due to human actions that disrupt nature's ability to do its beneficial work. *Ecosystem Services: Charting a Path to Sustainability* documents the National Academies Keck Futures Initiative Conference on Ecosystem Services. At this conference, participants were divided into 14 interdisciplinary research teams to explore diverse challenges at the interface of science, engineering, and medicine. The teams needed to address the challenge of communicating and working together from a diversity of expertise and perspectives as they attempted to solve a complicated interdisciplinary problem in a relatively short time. *Ecosystem Services: Charting a Path to Sustainability* describes how ecosystem services scientists work to document the direct and indirect links between humanity's well-being and the many benefits provided by the natural systems we occupy. This report explains the specific topics the interdisciplinary research teams addressed at the conference, including the following: how ecosystem services affect infectious and chronic diseases; how to identify what resources can be produced renewably or recovered by developing intense technologies that can be applied on a massive scale; how to develop social and technical capabilities to respond to abrupt changes in ecosystem services; how to design agricultural and aquacultural systems that provide food security while maintaining the full set of ecosystem services needed from landscapes and seascapes; how to design production systems for ecosystem services that improve human outcomes related to food and nutrition; how to develop appropriate methods to accurately value natural capital and ecosystem services; how to design a federal policy to maintain or improve natural capital and ecosystem services within the United States, including measuring and documenting the effectiveness of the policy; how to design a system for international trade that accounts for impacts on ecosystem services; how to develop a program that increases the American public's appreciation of the basic principles of ecosystem services.

Integrating Social Science and Ecosystem Management Linda Caldwell, Shela Mou, 1999-02
 Proceedings of the Conference on Integrating Social Sciences Ecosystem Management held in 1995. The overall purpose was to improve understanding, integration, research, and applications of the human dimension of ecosystem management. The goals were to: 1. discuss the state of knowledge of social sciences relevant to ecosystem management; 2. discuss how to integrate this knowledge with ecosystem management along with the physical/biological sciences; 3. develop a strategy to effectively integrate social sciences with ecosystem management; 4. identify a research agenda to further knowledge in the area.

Cordell, Southern Research Station, 1997. *A National Framework for Ecosystem Management*, 1994. Outlines four guiding principles for implementing ecosystem management in the United States, emphasizing collaboration, sustainability, and adaptability. Developed by the U.S. Forest Service, the framework supports research, citizen participation, and long-term environmental stewardship.
