

The cover of the 'Science Encyclopedia' is a vibrant collage of scientific concepts. At the top, a diagram of a DNA double helix is on the left, a satellite orbits a planet in the center, and a globe of Earth is on the right. Below the title, a list of topics is centered. The central focus is a large, colorful molecular model with red and yellow spheres. Surrounding this are various other elements: a portrait of a man (likely a scientist) on the left, a circuit board on the bottom left, a bundle of colorful fibers (like an optical fiber) at the bottom center, a classical bust on the right, and a cross-section of a brick wall at the bottom right. Several blue spheres are scattered throughout the design.

Varacalli,2007 A volume introducing Catholic social thought features entries on the faith's important figures and movements and analyzes theory and recent research in the social sciences      *Uncertainties and Limitations in Simulating Tropical Cyclones* Asuka Suzuki-Parker,2012-01-05 The thesis work was in two major parts development and testing of a new approach to detecting and tracking tropical cyclones in climate models and application of an extreme value statistical approach to enable assessment of changes in weather extremes from climate models The tracking algorithm applied a creative phase space approach to differentiate between modeled tropical cyclones and their mid latitude cousins A feature here was the careful attention to sensitivity to choice of selection parameters which is considerable The major finding was that the changes over time were relatively insensitive to these details This new approach will improve and add confidence to future assessments of climate impacts on hurricanes The extremes approach utilized the Generalized Pareto Distribution one of the standard approaches to statistics of extremes applied to present and future hurricane distributions as modeled by a regional climate model then applied the changes to current observations to extract the changes in the extremes Since climate models cannot resolve these extremes directly this provides an excellent method of determining weather extremes in general This is of considerable societal importance as we are most vulnerable to such extremes and knowledge of their changes enables improved planning and adaptation strategies      Modern Physics and its Philosophy M. Strauss,2012-12-06 In selecting the papers for this volume I have excluded all physics papers proper I have further omitted all book reviews Instead I have included two papers not published previously they are marked by an asterisk in the table of contents Since many of the papers were occasioned by Symposia or similar gatherings their chronological order is rather accidental Hence I have tried to group the papers thematically into four parts Within each part the order of sequence is from the more general to the more special or from a more popular to a more technical treatment The same principle has been applied to the sequential order of the parts The foundational papers on quantum mechanics have been arranged in a somewhat different manner Chapters XVI XIX are concerned with the logic of complementarity while in Chapters XX XXII a more radical reconceptualization is carried out Two of the older papers Chapters VI and VIII have been revised to bring them more into line with present terminology Other papers have been corrected by additions and omissions Additions are marked by square brackets while double square brackets II signify omissions or parts to be omitted Hence A B means that A should be replaced by B The heading of one paper Chapter XX has been changed to make it more descriptive      Philippine Science Encyclopedia ,1987      **How to Write the Global History of Knowledge-Making** Johannes Feichtinger,Anil Bhatti,Cornelia Hülmbauer,2020-03-02 This multidisciplinary collection of essays provides a critical and comprehensive understanding of how knowledge has been made moved and used by whom and for what purpose To explain how new

knowledge emerges this volume offers a two fold conceptual move challenging both the premise of insurmountable differences between confined autarkic cultures and the linear nation centered approach to the spread of immutable stocks of knowledge Rather the conceptual focus of the book is on the circulation amalgamation and reconfiguration of locally shaped bodies of knowledge on a broader global scale The authors emphasize that the histories of interaction have been made less transparent through the study of cultural representations thus distorting the view of how knowledge is actually produced Leading scholars from a range of fields including history philosophy social anthropology and comparative culture research have contributed chapters which cover the period from the early modern age to the present day and investigate settings in Africa Asia and Europe Their particular focus is on areas that have largely been neglected until now In this work readers from many disciplines will find new approaches to writing the global history of knowledge making especially historians scholars of the history and philosophy of science and those in culture studies Great Zimbabwe Shadreck

Chirikure,2020-11-29 Conditioned by local ways of knowing and doing Great Zimbabwe develops a new interpretation of the famous World Heritage site of Great Zimbabwe It combines archaeological knowledge including recent material from the author s excavations with native concepts and philosophies Working from a large data set has made it possible for the first time to develop an archaeology of Great Zimbabwe that is informed by finds and observations from the entire site and wider landscape In so doing the book strongly contributes towards decolonising African and world archaeology Written in an accessible manner the book is aimed at undergraduate students graduate students and practicing archaeologists both in Africa and across the globe The book will also make contributions to the broader field such as African Studies African History and World Archaeology through its emphasis on developing synergies between local ways of knowing and the archaeology
