Larson, 2013-11-11 *Science in Action* John Lenihan, 2020-07-24 In *Science in Action* John Lenihan shares his irrepressible enthusiasm for science With characteristic wit and humor he explains how science affects our daily lives in diverse areas such as medicine poetry politics the environment and the paranormal cheerfully debunking some popular pseudo scientific myths along the way John Fleming s delightful cartoons add wry comment to the text making this a book enjoyable to read time and again *Translating Behavioral Science Into Action* United States. National Advisory Mental Health Council. Behavioral Science Workgroup, 2000 *Science in Democracy* Mark B. Brown, 2009-08-14 An argument that draws on canonical and contemporary thinkers in political theory and science studies from Machiavelli to Latour for insights on bringing scientific expertise into representative democracy Public controversies over issues ranging from global warming to biotechnology have politicized scientific expertise and research Some respond with calls for restoring a golden age of value free science More promising efforts seek to democratize science But what does that mean Can it go beyond the typical focus on public participation How does the politics of science challenge prevailing views of democracy In *Science in Democracy* Mark Brown draws on science and technology studies democratic theory and the history of political thought to show why an adequate response to politicized science depends on rethinking both science and democracy Brown enlists such canonical and contemporary thinkers as Machiavelli Hobbes Rousseau Dewey and Latour to argue that the familiar dichotomy between politics and science reinforces a similar dichotomy between direct democracy and representative government He then develops an alternative perspective based on the mutual shaping of participation and representation in both science and politics Political representation requires scientific expertise and scientific institutions may become sites of political representation Brown illustrates his argument with examples from expert advisory committees bioethics councils and lay forums Different institutional venues he shows mediate different elements of democratic representation If we understand democracy as an institutionally distributed process of collective representation Brown argues it becomes easier

to see the politicization of science not as a threat to democracy but as an opportunity for it *Imagination of Science in Education* Michiel van Eijck, Wolff-Michael Roth, 2012-10-10 Researchers agree that schools construct a particular image of science in which some characteristics are featured while others end up in oblivion The result is that although most children are likely to be familiar with images of heroic scientists such as Einstein and Darwin they rarely learn about the messy day to day practice of science in which scientists are ordinary humans Surprisingly the process by which this imagination of science in education occurs has rarely been theorized This is all the more remarkable since great thinkers tend to agree that the formation of images imagination is at the root of how human beings modify their material world Hence this process in school science is fundamental to the way in which scientists being the successful agents in of science education actually create their own scientific enterprise once they take up their professional life One of the first to examine the topic this book takes a theoretical approach to understanding the process of imagining science in education The authors utilize a number of interpretive studies in both science and science education to describe and contrast two opposing forces in the imagination of science in education epicization and novelization Currently they argue the imagination of science in education is dominated by epicization which provides an absolute past of scientific heroes and peak discoveries This opens a distance between students and today s scientific enterprises and contrasts sharply with the wider aim of science education to bring the actual world of science closer to students To better understand how to reach this aim the authors offer a detailed look at novelization which is a continuous renewal of narratives that derives from dialogical interaction The book brings together two hitherto separate fields of research in science education psychologically informed research on students images of science and semiotically informed research on images of science in textbooks Drawing on a series of studies in which children participate in the imagination of science in and out of the classroom the authors show how the process of novelization actually occurs in the practice of education and outline the various images of science this process ultimately yields

Companion Encyclopedia of Science in the Twentieth Century John Krige, Dominique Pestre, 2013-11-05 With over forty chapters written by leading scholars this comprehensive volume represents the best work in America Europe and Asia Geographical diversity of the authors is reflected in the different perspectives devoted to the subject and all major disciplinary developments are covered There are also sections concerning the countries that have made the most significant contributions the relationship between science and industry the importance of instrumentation and the cultural influence of scientific modes of thought Students and professionals will come to appreciate how and why science has developed as with any other human activity it is subject to the dynamics of society and politics Science in Reflection Edna Ullmann-Margalit, 2012-12-06 The Israel Colloquium for the History Philosophy and Sociology of Science presents before you its third volume of proceedings The philosophy section of the volume has three main foci the scientific explanation Hempel and Ben Menachem Elster and Dascal realism in science Cohen and Zemach and its implications for the problem of

universals Armstrong and Bar Elli and the question of demarcation the dividing line between science and philosophy KrUger as well as the cognitive limits of science Stent There is no neat separation in this volume between essays on the history of science and those on the sociology of science and perhaps properly so Thus Lenoir s contribution is a clear example of the way the two disciplines combine and interrelate Joseph Ben David s comment on this lecture was among the last things he wrote knowing full well that his days were numbered Reading his contribution imparts a strong sense of loss the loss of a great sociologist and a wise man Not only history however but also historiography is a subject for reflection in this volume Freudenthal and Kerszberg And finally a couple of articles convey the sense of fascination with science as a story Heilbron Hughes We have by now come to expect from the investigations reported in the Israel Colloquium series not surface unity of theme and method but rather an underlying common commitment and zest for the scientific enterprise at its best The third volume hopes to join the first two in footing this bill
