Science and Creation John C. Polkinghorne, 2009-07-27 John C Polkinghorne internationally renowned priest scientist addresses fundamental questions about how scientific and theological worldviews relate to each other in this the second

volume originally published in 1988 of his trilogy which also included *Science and Providence* and *One World*. Dr Polkinghorne illustrates how a scientifically minded person approaches the task of theological inquiry postulating that there exists a close analogy between theory and experiment in science and belief and understanding in theology. He offers a fresh perspective on such questions as: Are we witnessing today a revival of natural theology? The search for God through the exercise of reason and the study of nature. How do the insights of modern physics into the interlacing of order and disorder relate to the Christian doctrine of Creation? What is the relationship between mind and matter? Polkinghorne states that the remarkable insights that science affords us into the intelligible workings of the world cry out for an explanation more profound than that which it itself can provide. Religion, if it is to take seriously its claim that the world is the creation of God, must be humble enough to learn from science what that world is actually like. The dialogue between them can only be mutually enriching.

Science and the World's Religions Patrick McNamara Ph.D., Wesley J. Wildman, 2012-07-19

This trio of volumes contains essays that explore vital existential, moral, or metaphysical issues surrounding the relationship between the sciences and the world's religions. In *Science and the World's Religions*, experts with scientific and religious backgrounds explore vital existential or practical issues drawing on whatever sciences are relevant and engaging at least two religious traditions. The multidisciplinary essays exhibit rigorous intellectual, scholarly thinking but are written to clearly communicate to educated adult lay readers. The first volume addresses questions about the origins and purpose of the cosmos and the human project. The second volume investigates the roles of religion and spirituality in human existence considering issues ranging from the brain and religious experience to the human life cycle. The third volume tackles controversies in which both religion and science are stakeholders, showing how both can deepen understanding and enrich human experience. Together, these three books present readers with powerful tools that enable them to think through the challenge of integrating science with their religious beliefs and spiritual practices.

The Warfare between Science and Religion Jeff Hardin, Ronald L. Numbers, Ronald A. Binzley, 2018-10-15

Why is the idea of conflict between science and religion so popular in the public imagination? The conflict thesis, the idea that an inevitable and irreconcilable conflict exists between science and religion, has long been part of the popular imagination. In *The Warfare between Science and Religion*, Jeff Hardin, Ronald L. Numbers, and Ronald A. Binzley have assembled a group of distinguished historians who explore the origin of the thesis, its reception, the responses it drew from various faith traditions, and its continued prominence in public discourse. Several essays in the book examine the personal circumstances and theological idiosyncrasies of important intellectuals including John William Draper and Andrew Dickson White, who through their polemical writings championed the conflict thesis relentlessly. Other essays consider what the thesis meant to different religious communities including evangelicals, liberal Protestants, Roman Catholics, Eastern Orthodox Christians, Jews, and Muslims. Finally, essays both historical and sociological explore the place of the conflict thesis in popular culture and intellectual discourse today. Based on original research and written in an accessible style, the

essays in *The Warfare between Science and Religion* take an interdisciplinary approach to question the historical relationship between science and religion. This volume which brings much needed perspective to an often bitter controversy will appeal to scholars and students of the histories of science and religion, sociology and philosophy. Contributors: Thomas H Aechtner, Ronald A Binzley, John Hedley Brooke, Elaine Howard Ecklund, Noah Efron, John H Evans, Maurice A Finocchiaro, Frederick Gregory, Bradley J Gundlach, Monte Harrell, Hampton Jeff Hardin, Peter Harrison, Bernard Lightman, David N Livingstone, David Mislin, Efthymios Nicolaidis, Mark A Noll, Ronald L Numbers, Lawrence M Principe, Jon H Roberts, Christopher P Scheitle, M Alper Yal inkaya. *Science and Religion in India* Renny Thomas, 2021-12-30. This book provides an in depth ethnographic study of science and religion in the context of South Asia giving voice to Indian scientists and shedding valuable light on their engagement with religion. Drawing on biographical, autobiographical, historical and ethnographic material, the volume focuses on scientists' religious life and practices and the variety of ways in which they express them. Renny Thomas challenges the idea that science and religion in India are naturally connected and argues that the discussion has to go beyond binary models of conflict and complementarity. By complicating the understanding of science and religion in India, the book engages with new ways of looking at these categories. **Secrets of Mayan Science/Religion** Hunbatz Men, 1990. An engaging study that reveals sacred teachings that the Mayan priesthood hid from Spanish conquistadores in Mexico in 1519. The author explores the scientific and spiritual principles underlying the ancient glyphs, numbers and language of the Maya. Religion and the Sciences of Origins Kelly James Clark, 2014-05-21. This concise introduction to science and religion focuses on Christianity and modern Western science, the epicenter of issues in science and religion in the West, with a concluding chapter on Muslim and Jewish Science and Religion. This book also invites the reader into the relevant literature with ample quotations from original texts. Science and Religion, 1450-1900 Richard G. Olson, Richard Olson, 2006-03-10. Galileo, Newton, Darwin. These giants are remembered for their great contributions to science. Often forgotten, however, is the profound influence that Christianity had on their lives and work. This study explores the many ways in which religion, its ideas, attitudes, practices and institutions interacted with science from the beginnings of the Scientific Revolution to the end of the nineteenth century. Both scientists and persons of faith sometimes characterize the relationship between science and religion as confrontational. Historian Richard G Olson finds instead that the interactions between science and religion in Western Christendom have been complex, often mutually supportive, even transformative. This book explores those interactions by focusing on a sequence of major religious and intellectual movements from Christian Humanist efforts to turn science from a primarily contemplative exercise to an activity aimed at improving the quality of human life to the widely varied Christian responses to Darwinian ideas in both Europe and North America during the second half of the nineteenth century. *Science & Religion in Contemporary Philosophy* Emile Boutroux, 1909.
