Science Society And Culture Understanding Science In The 21st Century:

Science, Culture and Society Mark Erickson, 2016-09-12 Science occupies an ambiguous space in contemporary society. Scientific research is championed in relation to tackling environmental issues and diseases such as cancer and dementia and science has made important contributions to today's knowledge economies and knowledge societies. And yet science is considered by many to be remote and even dangerous. It seems that as we have more science we have less understanding of what science actually is. The new edition of this popular text redresses this knowledge gap and provides a novel framework for making sense of science particularly in relation to contemporary social issues such as climate change. Using real world examples Mark Erickson explores what science is and how it is carried out, what the relationship between science and society is, how science is represented in contemporary culture and how scientific institutions are structured. Throughout the book brings together sociology, science and technology studies, cultural studies and philosophy to provide a far reaching understanding of science and technology in the twenty first century. Fully updated and expanded in its second edition *Science, Culture and Society* will continue to be key reading on courses across the social sciences and humanities that engage with science in its social and cultural context.

Science, Culture and Society Mark Erickson, 2005-09-23 In this easily accessible text Mark Erickson explains what science is and how it is carried out, the nature of the relationship between science and society, the representation of science in contemporary culture and how scientific institutions are structured.

Society, Culture and Technology at the Dawn of the 21st Century Katarzyna Leszczyńska, Janusz Mucha, 2010-04-16 The articles in this collection analyse methodological aspects of today's hard sciences and humanities and of applied research in the field of high technology. The authors explore structural and cultural contexts of scientific research, relations between information technologies and our everyday life as well as relations between innovation and business culture.

Science Wars through the Stargate Steven Gil, 2015-10-08 The story of an elite team of scientists and soldiers who travel to other worlds through an alien built portal Stargate SG 1 gave its viewers a weekly dose of spectacle and high adventure. Over its ten season run 1997-2007 the series explored the interactions of the scientific and military cultures represented by its characters as well as the place of science in society. The initial airing of Stargate SG 1 coincided with the Science Wars, a highly public clash among scholars and public intellectuals over the nature and value of scientific knowledge. Critics of science argued that it was merely one form of knowledge among many, subject to biases and blind spots imposed by the culture in which it was created. Defenders of science, mostly scientists themselves, contended that it possessed a unique ability to uncover universal truths and thus was uniquely valuable to society. In *Science Wars through the Stargate* Explorations of Science and Society in Stargate SG 1 Steven Gil offers the first in depth analysis of the series and places it in the context of contemporary debates about the nature of scientific thought. Gil contends that representations of science within SG 1 can be more fully understood through the prism of the Science Wars. Scientific ideas put forth in SG 1 demonstrate how such complex intellectual

exchanges and debates have a place in popular culture and can be further understood through these fictional articulations. Although SG 1 serves as the principal case study, the analysis also casts light on the role and position of science in science fiction television more generally. The long form narrative of Stargate SG 1 enabled it to engage in sophisticated ways with many of the questions at issue in the Science Wars. As the author illustrates, the show presented a complex, sophisticated portrait of science and scientists at a time when the scientific enterprise was under intense public scrutiny. Science Wars through the Stargate will be of interest to science fiction scholars and fans of the series but also to those interested in the public's evolving understanding of science and its role in society.

Expert Cultures in Central Eastern Europe Kohlrausch, Martin, Steffen, Katrin, Wiederkehr, Stefan, 2010-01-01. Das 20. Jahrhundert war das Jahrhundert des Experten. Der Aufstieg des Experten als eines speziellen Typus des beruflich qualifizierten Individuums war das Ergebnis zunehmender Verwissenschaftlichung von Wirtschaft, Gesellschaft und Politik. In seiner öffentlichen Funktion handelt der Experte stets im Spannungsfeld zwischen einem universellen Verständnis von Wissenschaft und den politischen Anforderungen, die der Nationalstaat an ihn stellt. Der vorliegende englischsprachige Band fragt nach dem Schicksal des Experten in Ostmitteleuropa vom Ende der dynastischen Imperien nach dem Ersten Weltkrieg bis zum Untergang des Kommunismus. Diese multiethnische Region mit ihrer gebrochenen Tradition von Staatlichkeit und politischen Systemen bildet ein ideales Fallbeispiel, um die komplexen Beziehungen zwischen transnationaler Kooperation und nationaler Orientierung im Handeln von Experten herauszuarbeiten. The 20th century can be described as the century of the expert. The emergence of the expert as a specific type of professionally qualified individual was a result of the growing scientification of economy, society and politics. In his public function, the expert always operates between a universalist understanding of science and the politically defined requirements of the nation state. This volume examines the fate of the expert in Central Eastern Europe from the breakdown of the dynastic empires after World War I to the end of Communism. This multiethnic region with its turbulent tradition of statehood and changing political systems provides an ideal case to reveal the complex relationship between the transnational cooperation among experts on the one hand and their national orientation on the other.

Comprehensive Nanoscience and Technology, 2010-10-29. From the Introduction: Nanotechnology and its underpinning sciences are progressing with unprecedented rapidity. With technical advances in a variety of nanoscale fabrication and manipulation technologies, the whole topical area is maturing into a vibrant field that is generating new scientific research and a burgeoning range of commercial applications with an annual market already at the trillion dollar threshold. The means of fabricating and controlling matter on the nanoscale afford striking and unprecedented opportunities to exploit a variety of exotic phenomena such as quantum nanophotonic and nanoelectromechanical effects. Moreover, researchers are elucidating new perspectives on the electronic and optical properties of matter because of the way that nanoscale materials bridge the disparate theories describing molecules and bulk matter. Surface phenomena also gain a greatly increased significance even

the well known link between chemical reactivity and surface to volume ratio becomes a major determinant of physical properties when it operates over nanoscale dimensions Against this background this comprehensive work is designed to address the need for a dynamic authoritative and readily accessible source of information capturing the full breadth of the subject Its six volumes covering a broad spectrum of disciplines including material sciences chemistry physics and life sciences have been written and edited by an outstanding team of international experts Addressing an extensive cross disciplinary audience each chapter aims to cover key developments in a scholarly readable and critical style providing an indispensable first point of entry to the literature for scientists and technologists from interdisciplinary fields The work focuses on the major classes of nanomaterials in terms of their synthesis structure and applications reviewing nanomaterials and their respective technologies in well structured and comprehensive articles with extensive cross references It has been a constant surprise and delight to have found amongst the rapidly escalating number who work in nanoscience and technology so many highly esteemed authors willing to contribute Sharing our anticipation of a major addition to the literature they have also captured the excitement of the field itself in each carefully crafted chapter Along with our painstaking and meticulous volume editors full credit for the success of this enterprise must go to these individuals together with our thanks for largely adhering to the given deadlines Lastly we record our sincere thanks and appreciation for the skills and professionalism of the numerous Elsevier staff who have been involved in this project notably Fiona Geraghty Megan Palmer and Greg Harris and especially Donna De Weerd Wilson who has steered it through from its inception We have greatly enjoyed working with them all as we have with each other

the twentieth century such as Oswald Spengler Paul Tillich Aldous Huxley Jacques Ellul and others have predicted would transpire in the current century Their vision included an out of control technological system and a return to religious sentiment that will ultimately undermine the system to which it is reacting This book aims to accurately present their positions and draw certain logical conclusions from them that pertain to the course of history in our time The book s theme argues that modernity is a secularized version of millennial Christianity which reaches its fullest development in the twenty first century and will regress into what Russian philosopher Nicholas Berdyaev called the new Middle Ages or a new religious period This will mean the twilight of modern technological society as its values of rationalism give way to a postrationalist society Ironically decline will come through further technological advance Omnicide threatens through religious world war driven by transcendent values and modern weaponry Jihadist thinking and posthumanist technology both establish the omnicidal mentality New technologies such as genetic engineering and artificial intelligence created under millennial inspiration to reach for immortality could potentially bring an end to the human species either through a slow steady obsolescence or through environmental catastrophe The titanic forces of technological progress and regress are on a direct collision course in the twenty first century
