Semigroups In Geometrical Function Theory:

Semigroups in Geometrical Function Theory D. Shoikhet, 2013-03-09 Historically complex analysis and geometrical function theory have been intensively developed from the beginning of the twentieth century They provide the foundations for broad areas of mathematics In the last fifty years the theory of holomorphic mappings on complex spaces has been studied by many mathematicians with many applications to nonlinear analysis functional analysis differential equations classical and quantum mechanics The laws of dynamics are usually presented as equations of motion which are written in the abstract form of a dynamical system $\frac{dx}{dt} = f(x, 0)$ where x is a variable describing the state of the system under study and f is a vector function of x The study of such systems when f is a monotone or an accretive generally nonlinear operator on the underlying space has been recently the subject of much research by analysts working on quite a variety of interesting topics including boundary value problems integral equations and evolution problems see for example 19 13 and 29 In a parallel development and even earlier the generation theory of one parameter semigroups of holomorphic mappings in \mathbb{C}^n has been the topic of interest in the theory of Markov stochastic processes and in particular in the theory of branching processes see for example 63 127 48 and 69

Geometric Function Theory and Applications of Complex Analysis to Mechanics Reiner Kühnau, 1991 **Harmonic and Complex Analysis and its Applications** Alexander Vasil'ev, 2013-11-09 This volume highlights the main results of the research performed within the network Harmonic and Complex Analysis and its Applications HCAA which was a five year 2007 2012 European Science Foundation Programme intended to explore and to strengthen the bridge between two scientific communities analysts with broad backgrounds in complex and harmonic analysis and mathematical physics and specialists in physics and applied sciences It coordinated actions for advancing harmonic and complex analysis and for expanding its application to challenging scientific problems Particular topics considered by this Programme included conformal and quasiconformal mappings potential theory Banach spaces of analytic functions and their applications to the problems of fluid mechanics conformal field theory Hamiltonian and Lagrangian mechanics and signal processing This book is a collection of surveys written as a result of activities of the Programme and

will be interesting and useful for professionals and novices in analysis and mathematical physics as well as for graduate students. Browsing the volume the reader will undoubtedly notice that as the scope of the Programme is rather broad there are many interrelations between the various contributions which can be regarded as different facets of a common theme.

Semigroup Theory and Its Applications Alfred H. Clifford, 1996-05-16. This volume contains survey papers by the invited speakers at the Conference on Semigroup Theory and Its Applications which took place at Tulane University in April 1994. The authors represent the leading areas of research in semigroup theory and its applications both to other areas of mathematics and to areas outside mathematics. Included are papers by Gordon Preston surveying Clifford's work on Clifford semigroups and by John Rhodes tracing the influence of Clifford's work on current semigroup theory. Notable among the areas of application are the paper by Jean-Eric Pin on applications of other areas of mathematics to semigroup theory and the paper by the editors on an application of semigroup theory to theoretical computer science and mathematical logic. All workers in semigroup theory will find this volume invaluable.

Complex Analysis and Dynamical Systems VI Matania Ben-Artzi, Greg Galloway, Lavi Karp, Dmitry Khavinson, Simeon Reich, Gilbert Weinstein, Lawrence Zalcman, 2015-12-03. This volume contains the proceedings of the Sixth International Conference on Complex Analysis and Dynamical Systems held from May 19-24, 2013 in Nahariya, Israel, in honor of David Shoikhet's sixtieth birthday. The papers in this volume range over a wide variety of topics in Partial Differential Equations, Differential Geometry, and the Radon Transform. Taken together, the articles collected here provide the reader with a panorama of activity in partial differential equations and general relativity drawn by a number of leading figures in the field. They testify to the continued vitality of the interplay between classical and modern analysis. The companion volume *Contemporary Mathematics* Volume 667 is devoted to complex analysis, quasiconformal mappings, and complex dynamics. This book is co-published with Bar Ilan University, Ramat Gan, Israel.

In addition, there are several articles dealing with various aspects of approximation theory and partial differential equations. Taken together, the articles collected here provide the reader with a panorama of activity in complex analysis drawn by a number of leading figures in the field.

Continuous Semigroups of Holomorphic Self-maps of the Unit Disc Filippo Bracci, Manuel D. Contreras, Santiago Díaz-Madrigal, 2020-02-14. The book faces the interplay among dynamical properties of semigroups, analytical properties of infinitesimal generators, and geometrical properties of Koenigs functions. The book includes precise descriptions of the behavior of trajectories, backward orbits, petals, and boundary behavior in general, aiming to give a rather complete picture of all interesting phenomena that occur. In order to fulfill this task, we choose to introduce a new point of view which is mainly based on the intrinsic dynamical aspects of semigroups in relation with the hyperbolic distance and a

deep use of Carathéodory prime ends topology and Gromov hyperbolicity theory This work is intended both as a reference source for researchers interested in the subject and as an introductory book for beginners with a undergraduate background in real and complex analysis For this purpose the book is self contained and all non standard and mostly all standard results are proved in details

Semigroups of Operators and Spectral Theory S Kantorovitz, 1995-06-19 This book presents some aspects of the theory of

semigroups of operators mostly from the point of view of its interaction with spectral theory. In order to make it self contained a concise description of the basic theory of semigroups with complete proofs is included in Part I. Some of the author's recent results such as the construction of the Hille-Yosida space for general operators, the semi-simplicity manifold and a Taylor formula for semigroups as functions of their generator are also included in Part I. Part II describes recent generalizations, most of them in book form for the first time, including pre-semigroups, semi-simplicity manifolds in situations more general than that considered in Part I, semigroups of unbounded symmetric operators and an analogous result on local cosine families and semi-analytic vectors. It is hoped that this book will inspire more research in this field. This book will be of particular interest to graduate students and researchers working operator theory and its applications.
