Wildlife, Wild Death Rodger Yeager, Norman N. Miller, 1986-06-30 This book examines the relationship between agricultural land use and wildlife protection in two eastern African countries Kenya and Tanzania Although both elements are vital to the societies and economies of these countries environmentally sensitive land use practices and effective wildlife management are seriously lacking in Kenya and Tanzania Within the broader context of environmental public policy the book traces the origins of these problems in the different policy experiences of the two countries and explores their current dimensions and magnitudes It also recommends future research and policy reforms that must be undertaken if Kenya and Tanzania are to achieve their developmental goals while avoiding environmental disaster and the extinction of their endangered wild animals Through its

analysis the book provides a better understanding of similar conflicts wherever they appear in a world of increasing competition among threatened life forms

The Myth of Wild Africa Jonathan S. Adams, Thomas O. McShane, 1996 Africa's wildlife heritage is under siege and its worst enemy may be traditional conservation methods The authors tell of new conservation programs that include more Africans in the planning execution and financial benefits of this multi billion dollar business

Ecology in Action Fred Singer, 2016-03-10 Integrates process and content of core areas of ecology using an engaging narrative fascinating case studies and stunning images throughout

Civilizing Nature Bernhard Gissibl, Sabine Höhler, Patrick Kupper, 2012-11-01 National parks are one of the most important and successful institutions in global environmentalism Since their first designation in the United States in the 1860s and 1870s they have become a global phenomenon The development of these ecological and political systems cannot be understood as a simple reaction to mounting environmental problems nor can it be explained by the spread of environmental sensibilities Shifting the focus from the usual emphasis on national parks in the United States this volume adopts an historical and transnational perspective on the global geography of protected areas and its changes over time It focuses especially on the actors networks mechanisms arenas and institutions responsible for the global spread of the national park and the associated utilization and mobilization of asymmetrical relationships of power and knowledge contributing to scholarly discussions of globalization and the emergence of global environmental institutions and governance

The New Wild Fred Pearce, 2016-04-05 Named one of the best books of 2015 by The Economist A provocative exploration of the new ecology and why most of what we think we know about alien species is wrong For a long time veteran environmental journalist Fred Pearce thought in stark terms about invasive species they were the evil interlopers spoiling pristine natural ecosystems Most conservationists and environmentalists share this view But what if the traditional view of ecology is wrong what if true environmentalists should be applauding the invaders In The New Wild Pearce goes on a journey across six continents to rediscover what conservation in the twenty first century should be about Pearce explores ecosystems from remote Pacific islands to the United Kingdom from San Francisco Bay to the Great Lakes as he digs into questionable estimates of the cost of invader species and reveals the outdated intellectual sources of our ideas about the balance of nature Pearce acknowledges that there are horror stories about alien species disrupting ecosystems but most of the time the tens of thousands of introduced species usually swiftly die out or settle down and become model eco citizens The case for keeping out alien species he finds looks increasingly flawed As Pearce argues mainstream environmentalists are right that we need a rewilding of the earth but they are wrong if they

imagine that we can achieve that by reengineering ecosystems Humans have changed the planet too much and nature never goes backward But a growing group of scientists is taking a fresh look at how species interact in the wild According to these new ecologists we should applaud the dynamism of alien species and the novel ecosystems they create In an era of climate change and widespread ecological damage it is absolutely crucial that we find ways to help nature regenerate Embracing the new ecology Pearce shows us is our best chance To be an environmentalist in the twenty first century means celebrating nature s wildness and capacity for change

Against Extinction William (Bill) Adams,2013-06-17 Conservation in the 21st century needs to be different and this book is a good indicator of why Bulletin of British Ecological Society Against Extinction tells the history of wildlife conservation from its roots in the 19th century through the foundation of the Society for the Preservation of the Wild Fauna of the Empire in London in 1903 to the huge and diverse international movement of the present day It vividly portrays conservation s legacy of big game hunting the battles for the establishment of national parks the global importance of species conservation and debates over the sustainable use of and trade in wildlife Bill Adams addresses the big questions and ideas that have driven conservation for the last 100 years How can the diversity of life be maintained as human demands on the Earth expand seemingly without limit How can preservation be reconciled with human rights and the development needs of the poor Is conservation something that can be imposed by a knowledgeable elite or is it something that should emerge naturally from people s free choices These have never been easy questions and they are as important in the 21st century as at any time in the past The author takes us on a lively historical journey in search of the answers

Making Spaces through Infrastructure Marian Burchardt, Dirk Laak, 2023-07-04 Infrastructures are fundamental means through which societies create spaces but little is known about the precise ways in which this occurs How have infrastructures animated certain understandings of space How do infrastructures stabilize or undermine the spatial formats in which we live which shape our everyday practices and which regulate access to services and resources And conversely how do spaces frame the ways infrastructural provision is organized How do existing spaces shape infrastructural development and the scope and forms of access to vital services such as transport and water In this volume historians and sociologists draw on a range of fascinating case studies and provide compelling answers to these questions Exploring among others the provision of irrigation water in nineteenth century Los Angeles the invention of airport transit zones and the infrastructural practices of homeless people in Berlin the book demonstrates how the making of spaces through infrastructure is deeply political Intent on revealing uneven geographies of provision and hierarchies of access the contributors highlight how infrastructures are products of global entanglements
