Love and Hate Irenäus Eibl-Eibesfeldt, The author argues that there are specific turning points in evolution Structures and behavioral patterns that evolved in the service of discrete functions sometimes allow for unforeseen new developments as a side effect In retrospect they have proven to be pre adaptations and serve as raw material for natural selection to work upon Love and Hate was intended to complement Konrad Lorenz s book On Aggression by pointing out our motivations to provide nurturing and thus to counteract and correct the widespread but one sided opinion that biologists always present nature as bloody in tooth and claw and intra specific aggression as the prime mover of evolution This simplistic image is nonetheless still with us all the more regrettably because it hampers discussion across scholarly disciplines Eibl Eibesfeldt argues that leaders in individualized groups are chosen for their pro social abilities Those who comfort group members in distress who are able to intervene in quarrels and to protect group members who are attacked those who share those who in brief show abilities to nurture are chosen by the others as leaders rather than those who use their abilities in competitive ways Of course group leaders may need beyond their pro social competence to be gifted as orators war leaders or healers Issues of love and hate are social in origin and hence social in consequence Life has emerged on this planet in a succession of new forms from the simplest algae to man man the one being who reflects upon this creation who seeks to fashion it himself and who in the process may end by destroying it It would indeed be grotesque if the question of the meaning of life were to be solved in this way As the author notes in the preface of this new edition I discuss the phylogenetic origin of our behavior and motivations which provide the basis for our cultural evolution and thus for our humanitarian hopes In language that is clear and accessible throughout arguing forcefully for the innate and preprogrammed dispositions of behavior in higher vertebrates including humans Eibl Eibesfeldt steers a middle course in discussing the development of cultural and ethical norms while insisting on their matrix of biological origins

**Biology and Ideology from Descartes to Dawkins** Denis R. Alexander, Ronald L. Numbers, 2010-05-15 Over the course of human history the sciences and biology in particular have often been manipulated to cause immense human suffering For example biology has been used to justify eugenic programs forced sterilization human experimentation and death camps all in an attempt to support notions of racial superiority By investigating the past the contributors to *Biology and Ideology from Descartes to Dawkins* hope to better prepare us to discern ideological abuse of science when it occurs in the future Denis R Alexander and Ronald L

Numbers bring together fourteen experts to examine the varied ways science has been used and abused for nonscientific purposes from the fifteenth century to the present day Featuring an essay on eugenics from Edward J Larson and an examination of the progress of evolution by Michael J Ruse Biology and Ideology examines uses both benign and sinister ultimately reminding us that ideological extrapolation continues today An accessible survey this collection will enlighten historians of science their students practicing scientists and anyone interested in the relationship between science and culture

**Multichannel Integrations of Nonverbal Behavior** Aron Wolfe Siegman, Stanley Feldstein, 2014-04-04 First published in 1985 This book takes a multichannel perspective The first three chapters are written from a distinctly functional perspective the function of nonverbal behavior on interpersonal attraction in the expression of emotions and in the control of conversations They are followed by two topically organized chapters namely the role of nonverbal behavior in interpersonal expectancies and deceptive communications They in turn are followed by a process oriented discussion of the nature of nonverbal behavior The book concludes with two contributions concerned with the demography of nonverbal behavior the role of gender class and ethnicity with the latter viewed from a cultural perspective In each case however the chapter is organized to the extent possible from a multichannel perspective

**Pedophilia** Jay R. Feierman, 2012-12-06 The Reason for this Volume If we were to judge the seriousness of a psychosocial problem by the attention that the popular media give to it we would have to conclude that the modern world is in the midst of an epidemic of pedophilic child sexual abuse One can scarcely go more than a few weeks in any large metropolitan area without reading about one of the community's upstanding citizens discovered to have been sexually involved with children or adolescents The attention that the popular media give this topic is paralleled by the attention that it receives in the social sciences where literally dozens of books and more than a thousand articles have been published on it in the past few years In fact child sexual abuse along with co dependency and dysfunctional family have become the avant garde psychological cliches of the decade However most of the lay and professional literature although voluminous reflect a narrow anthropo ethno and chronocentrism that precludes any real understanding of the topic with anything more than the preconceptions of our times

**Basics of Animal Communication** Dario Martinelli, 2017-08-21 This volume represents a short yet systematic introduction to the topic of animal communication in a way that blends natural sciences and humanities into a multidisciplinary approach It is structured in a way that allows students and teachers in this field to employ it as a useful pedagogical tool and it is written with a style that is clear and engaging A glossary of difficult terms and a rich bibliography are also available altogether making Basics of Animal

Communication very informative reading      Evolutionary Intelligence Rolf W. Frohlich, 2009-04 Human nature holds the intelligence of life It provides a psychology that is much stronger more effective and more reliable than the psychology society teaches us This psychology taps into the evolutionary survival experience of our species which occupied most of human history It was the period when the species evolved and our ancestor survived as a hunter and gatherer More than 99% of human history is encoded in the DNA of our genes and lastingly etched into the human psyche Our natural psychology the human psyche is the result of evolutionary adaptation The psyche provides the genetic capacity for behavioral mental and spiritual adaptation It supports the gratification of our needs And it contains the blueprint of human life The book is about human nature and human survival Human nature that is the human psyche has survival value The book introduces a metapsychology that refers to the Jungian archetypes and the survival capabilities inherent in the psyche Like all living organisms and forms of life we possess an innate capacity for survival By awakening this evolutionary intelligence we gain access to the primordial power and wisdom of the archetypal psyche This innate psychology transcends the cultural conditioning that has shaped us all and erects an entirely different reference system making us look at life in a new way We live in a world that reflects human nature and we are well equipped to survive in it Beyond that there is also something in us that resonates with a larger context Our psychological constitution relates us to the outer realities of nature and cosmos It is in this sense that we partake in the evolution of life on this planet and in the larger design of a cosmic universe This primary psyche is shared by all humanity as part of a common biological and psychological history      Political Questions Larry Arnhart, 2015-08-28 In this enhanced edition Larry Arnhart continues to ask thought provoking questions that illuminate the philosophies of some of the most prominent political thinkers throughout history This clear well written guide is an ideal supplement to the original texts he recommends at the beginning of each chapter In addition to his analysis of Plato Aristotle Augustine Aquinas Machiavelli Descartes Rousseau Hegel Marx Nietzsche and Rawls the author s well organized and insightful approach provides an even more comprehensive overview than the earlier editions Supplementing the discussion of Leviathan the chapter on Thomas Hobbes covers Behemoth The chapter on John Locke includes his Letter Concerning Toleration as well as the original discussion of Second Treatise of Government A chapter on Adam Smith has been added which discusses Theory of Moral Sentiments and Wealth of Nations Leo Strauss is featured with an examination of Persecution and the Art of Writing and Natural Right and History A final chapter analyzes Steven Pinker s The Better Angels of Our Nature      National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1972 First multi year cumulation covers six years 1965 70      **Human Emotions** Carroll E. Izard, 2013-11-11 In recent years especially the past decade in sharp contrast to preceding decades knowledge in the field of emotions has been steadily increasing This knowledge comes from many different specialties Emotion is a truly interdisciplinary subject Workers in the fields of physiology neurology ethology physiological psychology personality and social psychology clinical psychology and psychiatry

medicine nursing social work and the clergy are all directly concerned with emotion Professions such as law and architecture have an obvious concern with emotions as they affect human motives and needs The various branches of art especially the performing arts certainly deal with the emotions especially with the expression of emotions Constantine Stanislavsky the Russian theatrical genius revolutionized modern theater by developing a training method for actors and actresses that emphasized creating genuine emotion on the stage the emotion appropriate to the character and the life situation being depicted Indeed one can hardly think of any human activity that is not related in some way to the field of emotion Since the contributions to the subject of emotions come from so many different disciplines it is difficult to find the important common themes that can yield an understanding of the field as a whole This volume will attempt to make that task easier but I recognize that no one can treat all of the diverse material expertly and in detail My aim will be to represent all important types of contributions and perhaps point the way for further and more intensive study of special topics

**Perception of Self in Emotional Disorder and Psychotherapy** Lorne M. Hartman, Kirk R. Blankstein, 2013-11-11 One's view of self has pervasive and significant effects socially psychologically and even biologically Regardless of theoretical differences most psychotherapists agree that perception of self in one way or another profoundly impacts emotional satisfaction behavioral adaptation and rational thinking Self acceptance has played a major role in almost every major theory of personality Despite its recognized importance over the years only recently has the perception of self received vigorous research attention as a central variable in the development and maintenance of psychological dysfunction and as a mediating mechanism in effecting psychological change Several lines of evidence point to the importance of self perception in emotional disorder and psychotherapy Feelings of inadequacy and unworthiness are frequently cited complaints among persons seeking psychological help People with low self esteem see themselves as helpless and inferior They feel incapable of improving their situation They fail to evidence the requisite inner resources or coping abilities for tolerating the stress of their life situation The ability to be involved in healthy intimate relationships to engage in successful career performance to experience satisfactory sexual functioning or to maintain effective mood management are all subject to disruption as a result of inconsistent and impaired self appraisal

**Ethnic Conflict and Indoctrination** Irenäus Eibl-Eibesfeldt, Frank K. Salter, 1998 Violent ethno nationalist conflicts continue to mar the history of the current century yet no satisfactory answer to the question of why humans are susceptible to indoctrination by ideologies that lead to inter group hostility has so far been found In this volume an international team of leading scientists from many different fields approach this complex issue from a biological perspective treating indoctrinability as a predisposition that has its roots in humanity's evolutionary past

**Indoctrinability, Ideology, and Warfare** Irenäus Eibl-Eibesfeldt, Frank K. Salter, 1998 Violent ethno nationalist conflicts continue to mar the history of the twentieth century yet no satisfactory answer as to why humans are susceptible to indoctrination by ideologies leading to inter group hostility has thus far been found This volume brings together an

international team of leading scientists to address this complex issue from disciplines as diverse as anthropology psychology psychobiology sociology philosophy ethology sociology and political science Treating the processes of indoctrination as a biological phenomenon with physiological and psychological aspects these essays explore the answers to this pressing question in humanity's evolutionary past

**Rethinking Philosophers' Responsibility** Lydia Amir, 2017-11-06 Calling on philosophers as the custodians of rationality to reconsider their responsibility toward their communities and the state of civilization at large this book considers philosophy to be a practical discipline Largely foreign to philosophers and non philosophers alike this conception of philosophy discloses the relevance of its unique contributions to contemporary society The book offers a compelling and accessible analysis of philosophy also in relation to religion psychology the New Age Movement and globalization and exemplifies through a wide range of current problems how philosophers can fulfil their responsibility Its argument that responsibility lies where one is capable of doing what is needed and even more so when no one else can do it targets philosophers However its innovative study of contemporary philosophy coupled with its original contributions to the problems at hand will engage academics and students from other disciplines as well as a general readership

*Attachment and Bonding* C. Sue Carter, Lieselotte Ahnert, K. E. Grossmann, Sarah B. Hrdy, Michael E. Lamb, 2015-10-06 Scientists from different disciplines including anthropology psychology psychiatry pediatrics neurobiology endocrinology and molecular biology explore the concepts of attachment and bonding from varying scientific perspectives Attachment and bonding are evolved processes the mechanisms that permit the development of selective social bonds are assumed to be very ancient based on neural circuitry rooted deep in mammalian evolution but the nature and timing of these processes and their ultimate and proximate causes are only beginning to be understood In this Dahlem Workshop Report scientists from different disciplines including anthropology psychology psychiatry and behavioral biology come together to explore the concepts of attachment and bonding from diverse perspectives In their studies they seek to understand the causes or the consequences of attachment and bonding in general and their different qualities in individual development in particular They address such questions as biobehavioral processes in attachment and bonding early social attachment and its influences on later patterns of behavior bonding later in life and adaptive and maladaptive or pathological outcomes The studies confirm that social bonds have consequences for virtually all aspects of behavior and may be protective in the face of both physical and emotional challenges

*Connections Between Sexuality and Aggression* Dolf Zillmann, 2021-02-25 This is the only available comprehensive monograph on interrelations and interdependencies between agonistic and sexual behaviors Integrating theory and research from biology anthropology neurophysiology endocrinology psychophysiology and psychology this book focuses on the mechanisms that govern the mutual influences between sexuality and aggression in behavior sequences and especially in admixtures of aggressive sexual behaviors This book places human agonistic and sexual behaviors into an evolutionary context It offers a Weltbild of human aggressive sexual behaviors by tracing their biological

and developmental origins and examines the plasticity and manipulability of connections between agonistic and sexual behaviors. Strategies for the maximization of sexual pleasures are elaborated and intervention treatments aiming at the control of violent behaviors are considered. Coercive sexuality is given special attention. Prevalent motive ascriptions to rape are called into question and the motivation that dominates rape is reinterpreted in the context of pleasure maximization. This second edition brings the coverage of pertinent research up to date. It advances the exploration of aggressive sexual behaviors by further integrating the research contributions from various disciplines and by refining and unifying theory capable of explaining the behavioral phenomena under consideration.

**COPY FOR ZILLMANN MAILER**

Zillmann examines issues such as sexual access through aggression, the involvement of agonistic behavior within sexuality, sex aggression fusion, the consequences of anticipatory imagination concerning sexuality and aspects of libido loss due to excitatory habituation. This book also traces connection between sexuality and aggression in nonhuman species, especially in nonhuman primates, subjects human behavior to comparative and evolutionary analysis, examines connectedness in neurological and endocrinological terms, details both central and autonomic commonalities between sexual and aggressive behaviors, outlines sexual dimorphism and chromosomal endocrine aberrations, pays special attention to adrenal commonalities in sexual and aggressive behaviors and the fusion of these behaviors, and examines aggressive sexual connectedness in the analysis of motivation and emotion. Zillmann finally proposes new explanations for the numerous documented associations between sexuality and aggression. These proposals combine biological, neuroendocrine, autonomic and cognitive aspects of aggressive and sexual behaviors. A trichotomy of excitatory interdependencies is developed for fight, flight and coition. In the nomenclature of emotion, this trichotomy concerns the interdependencies between aggressiveness, fear and sexual impulsion. A considerable amount of research evidence is aggregated in support of these interdependencies. The author ultimately examines the exploitation of the existing connections between sexual and aggressive behaviors, especially the exploitation that serves the enhancement of sexual pleasure. In this context, he arrives at novel and perhaps distressing characterizations of sexual coercion. However, he also explores sexual boredom and discusses remedies in the framework of his theorizing. Last but not least, sexual aggression and sexual and aggressive behaviors independently are placed into an evolutionary context. Recognition and acknowledgment of the archaic nature of many aspects of sexual and aggressive behaviors, in contrast to the comparatively vernal development of behavior guiding contemplation, leads him to a unique and provocative proposal of the function of aggression in the realm of sexuality.

**The Natural History of the Rich: A Field Guide** Richard

Conniff, 2003-10-17

A tantalizing droll study of the idiosyncratic existence of the very rich through the unexpected lens of the naturalist. Journalist Richard Conniff probes the age-old question: Are the rich different from you and me? and finds that they are indeed a completely different animal. He observes with great humor this socially unique species, revealing their strategies for ensuring dominance and submission, their flourishes of display behavior, the intricate dynamics of their pecking order, as

well as their unorthodox mating practices Through comparisons to other equally exotic animals Conniff uncovers surprising commonalities
