operation by computer calculation and there have been three waves for this at 15 year intervals The first wave came at the beginning of the 1970s when LSIs Large Scale Integrated circuits with more than 1000 components had just been introduced into the market A mainframe computer was used for the simulation and each semiconductor company used its own proprietary simulators and device models However the capability of the computer and accuracy of the model were far from satisfactory and there are many cases of the necessity of circuit redesign after evaluation of the first chip The second wave hit us in the middle of 1980s when the EWS Engineering Work Station was introduced for use by designers

[Ion Implantation in Semiconductors](#) Ingolf Ruge, J. Graul, 2012-12-06 In recent years great progress has been made in the field of ion implantation particularly with respect to applications in semiconductors It would be impossible not to note the growing interest in this field both by research groups and those directly concerned with production of devices Furthermore as several papers have pointed out ion implantation and its associated technologies promise exciting advances in the development of new kinds of devices and provide powerful new tools for materials investigations It was therefore appropriate to arrange the II International Conference on Ion Implantation in Semiconductors within the rather short time of one year since the first conference was held in 1970 in Thousand Oaks California Although originally planned on a small scale with a very limited number of participants more than two hundred scientists from 15 countries participated in the Conference which was held May 24-28 1971 at the Congress Center in Garmisch Partenkirchen This volume contains the papers that were presented at the Conference Due to the tremendous volume of research presented publication here of all the works in full detail was not possible Many authors therefore graciously agreed to submit abbreviated versions of their papers
