The Guenons: Diversity and Adaptation in African Monkeys Mary E. Glenn, Marina Cords, 2006-04-11 It has been twelve years since a work relating to the long tailed African monkeys known as the guenons has been published and fifteen years have passed since the last major scientific symposium was held that was solely dedicated to current research on members of this monkey group living in the wild Since that time new guenon species and subspecies have been discovered previously unstudied guenon species have become the subject of long term research projects and knowledge of the more well known guenon species has greatly increased This volume presents novel information and keen insight on research previously studied and newly discovered A wide range of topics related to guenon biology is presented including evolution taxonomy biogeography reproductive physiology social and positional behavior ecology and conservation Composed of 26 chapters compiled by 47 authors many of whom are young investigators in their field The Guenons Diversity and Adaptation in African Monkeys provides a valuable resource for researchers and scientists in the fields of anthropology primatology zoology and conservation biology

Long-Term Field Studies of Primates Peter M. Kappeler, David P. Watts, 2012-01-06 Some primate field studies have been on going for decades covering significant portions of individual life cycles or even multiple generations In this volume leading field workers report on the history and infrastructure of their projects in Madagascar Africa Asia and South America More importantly they provide summaries of their long term research efforts on primate behaviour ecology and life history highlighting insights that were only possible because of the long term nature of the study The chapters of this volume collectively outline the many scientific reasons for studying primate behaviour ecology and demography over multiple generations This kind of research is typically necessitated by the relatively slow life histories of primates Moreover a complete understanding of social organization and behaviour factors often influenced by rare but important events requires long term data collection Finally long term field projects are also becoming increasingly important foci of local conservation activities

Mammals of Africa: Volume II Jonathan Kingdon, 2014-11-20 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa s mammals With more than 1 160 species and 16 18 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the

species concerned as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Edited by Jonathan Kingdon David Happold Tom Butynski Mike Hoffmann Meredith Happold and Jan Kalina and written by more than 350 authors all experts in their fields Mammals of Africa is as comprehensive a compendium of current knowledge as is possible Extensive references alert readers to more detailed information Volume II is edited by Thomas Butynski Jonathan Kingdon and Jan Kalina and contains profiles of 93 species of primates this includes the great apes Old World monkeys lorises and galagos *The Natural History of Primates* Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century Mammals of Africa Jonathan Kingdon, David Happold, Thomas Butynski, Michael Hoffmann, Meredith Happold, Jan Kalina, 2013-05-23 WINNER OF THE 2014 DARTMOUTH MEDAL AWARDED BY THE AMERICAN LIBRARY ASSOCIATION Mammals of Africa represents a high water mark not just in mammalogy but in scientific publishing overall Magnificent Tim Flannery Macquarie University Sydney Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa's mammals With 1 160 species and 16 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes some 660 colour illustrations by Jonathan Kingdon and his many drawings highlight details of morphology and behaviour of the species concerned Diagrams schematic details and line drawings of skulls and jaws are by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Extensive references alert readers to more detailed information **Primate Ethnographies** Karen B.

Strier,2025-08-29 This new second edition of *Primate Ethnographies Fieldwork from Across the Globe* is a collection of first person accounts of immersive field studies of primates people and institutions revealing the excitement of studying wild primates and the multi faceted challenges involved in conducting field research This collection of essays spans the diversity of the Primate Order from lemurs to monkeys and apes The ethnographic accounts are written by experts whose diverse backgrounds and experiences reveal the broader nature of the primatological field experience and provide glimpses into the many different pathways one can follow into the field of contemporary primatology This new edition features updated chapters from original contributors as well as new voices from across the global north and south representing cutting edge scholarship in the field Collectively these essays provide insights into the driving concerns of field primatology as it is practiced across the world *Primate Ethnographies Fieldwork from Across the Globe* is of interest to students from fields across the academy including Primatology Anthropology Wildlife Ecology Zoology Conservation Biology and Science Nature Writing

Tourism and Natural Protected Areas M. F. Schmitz,2013-10-16 Yellowstone National Park spans the states of Montana Wyoming and Idaho in the USA It is famous worldwide Since their creation in 1872 most protected natural areas have been considered as probably the greatest achievement of nature conservation Many countries have such spaces within their territories and many visitors native or foreign use some of their free time to get to know them In this sense these spaces undertake to conserve nature and educate society and give us a kind of cultural tourism that has grown considerably in recent decades Cultural tourism today specifically includes along with cities museums monuments and rural traditions the aim of getting to know nature Protected natural areas are ideal for this The tourism industry has realised this and so the value of the landscape and natural resources is becoming increasingly recognised This is a welcome development and represents a challenge for tourism management for environmental education and for dissemination of nature and conservation This volume of the series *Tourism Today* considers the evolving relationship between tourism and protected natural areas

Forest Diversity and Management David L. Hawksworth,Alan T. Bull,2007-04-06 Drawing on research from biodiversity experts around the world this book reflects the diversity of forest types and forest issues that concern forest scientists Coverage ranges from savannah and tropical rainforests to the ancient oak forests of Poland issues explored include the effects of logging management practices forest dynamics and climate change on forest structure and biodiversity Here is a useful overview of current science for researchers and educators alike

Primate Socioecology Lynne A. Isbell,2024-07-02 This game changing book questions long accepted rules of primate socioecology and redefines the field from the ground up In *Primate Socioecology* renowned researcher Lynne A Isbell offers a fresh perspective on primate social organizations that redefines the field from the ground up Through her innovative Variable Home Range Sharing model Isbell unravels the mystery of why some primates live alone while others live in pairs or groups a question that has perplexed scientists for decades This new approach diverges from the traditional focus on predation pressure as the main determinant

of primate social organization to reveal deeper ecological causes of primate behavior The implications of this shift are profound underscoring the critical importance of a behavioral ecological mechanism in which varying movement strategies affect which females share their home ranges and ultimately pointing to a new functional classification system for primate social organizations Isbell also discusses a supportive test of predicted movement strategies using activity budgets why thermal constraints explain the dichotomy between small nocturnal primates and large diurnal primates the role of sensory differences in nocturnal solitary foragers versus diurnal group living primates Useful as both an introduction to primate socioecology and for those seeking a robust examination of the topic *Primate Socioecology* addresses scientific debates about primate social organizations and invites researchers to question long held assumptions **Old World Monkeys** Paul F. Whitehead, Clifford J. Jolly, 2000-05-04 Old World monkeys Cercopithecoidea are the most successful and diverse group of living non human primates in terms of the number of species behavioural repertoires and ecology They have much to teach us about the processes of evolution and the principles of ecology and are among our closest living relatives This volume presents a broad technical account of cercopithecoid biology including molecular behavioural and morphological approaches to phylogeny population structure allometry fossil history functional morphology ecology cognitive capabilities social behaviour and conservation It will be the definitive reference on this group for professionals and graduate students in primatology animal behaviour paleontology morphology systematics and physical anthropology but will also be useful to senior undergraduates *Sustainable Tourism II* C. A. Brebbia, F. D. Pineda, 2006 Contributors from the tourist industry economics and environmental sciences consider issues raised by an increased desire of tourists to see nature and experience exotic cultures rather than visit famous ruins and cities and the growing acknowledgment that tourism degrades those very attractions Only the authors are indexed *African Biodiversity* Bernhard A. Huber, Bradley J. Sinclair, Karl-Heinz Lampe, 2005 This book highlights African biodiversity at all levels ranging from molecules to ecosystems Major topics are biogeography speciation processes phylogenetic patterns and systematics diversity decline and conservation and applied biodiversity informatics The 42 contributions are mostly on insects and vertebrates but include botanical papers as well as more general chapters on biodiversity informatics **Fishery Bulletin** ,1991 **African Genesis** Sally C. Reynolds, Andrew Gallagher, 2012-03-29 The discovery of the first species of African hominin *Australopithecus africanus* from Taung South Africa in 1924 launched the study of fossil man in Africa New discoveries continue to confirm the importance of this region to our understanding of human evolution Outlining major developments since Raymond Dart's description of the Taung skull and in particular the impact of the pioneering work of Phillip V Tobias this book will be a valuable companion for students and researchers of human origins It presents a summary of the current state of palaeoanthropology reviewing the ideas that are central to the field and provides a perspective on how future developments will shape our knowledge about hominin emergence in Africa A wide range of key themes are covered from the earliest fossils from Chad and Kenya to the

origins of bipedalism and the debate about how and where modern humans evolved and dispersed across Africa Primate Males Peter M. Kappeler, 2000-05-04 The size and composition of primate groups varies tremendously across species within species and within groups over time The most variable quantity is the number of adult males In some groups single males can monopolize access to several females whereas reproduction is shared among several males in other groups This variation lies at the heart of understanding adaptive variation among social systems Whether groups contain single or multiple males has important consequences for reproductive strategies of both sexes and also shapes these animals morphology and behaviour Written by leading authorities this book provides an extensive overview of variation in group composition across all major primate taxa using up to date reviews case studies evolutionary theory and theoretical models setting primates into context with birds and other mammals It will become a firm favorite with all those interested in the behavioural ecology of primates

Eat Or be Eaten Lynne E. Miller, 2002-04-04 Edited work on behavioural strategies of primates in foraging for food and avoiding being eaten Wildlife Review, 1987 **Nutrient Requirements of Nonhuman Primates** National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Ad Hoc Committee on Nonhuman Primate Nutrition, Committee on Animal Nutrition, 2003-02-01 This new release presents the wealth of information gleaned about nonhuman primates nutrition since the previous edition was published in 1978 With expanded coverage of natural dietary habits gastrointestinal anatomy and physiology and the nutrient needs of species that have been difficult to maintain in captivity it explores the impact on nutrition of physiological and life stage considerations infancy weaning immune function obesity aging and more The committee also discusses issues of environmental enrichment such as opportunities for foraging Based on the world's scientific literature and input from authoritative sources the book provides best estimates of nutrient requirements The volume covers requirements for energy carbohydrates including the role of dietary fiber proteins and amino acids fats and fatty acids minerals fat soluble and water soluble vitamins and water The book also analyzes the composition of important foods and feed ingredients and offers guidelines on feed processing and diet formulation
