Alarming! The Chasm Separating Basic Statistics Education from its Necessities William J. Adams, 2013-05-20
The fairly large sample of current basic statistics books I gave thought to recently may in my view be characterized as number pushers with a large number of illustrations intended to convey a sense of the importance of statistics to the study of real world problems. What's wrong with that? Nothing provided that what I submit to be the necessities of statistics education are given the attention they warrant are not smothered by glitzy overwhelming attention to number pushing. Do not receive short shrift or are not mentioned at all. Am I being too critical? I invite you to give thought to fifteen issues/questions that are the core of the aforementioned chasm and render your verdict. Food for thought in support of the issues/questions raised along with answers/discussion are included. Many students and those who apply statistics to their fields of interest subscribe to the view that to apply statistics to a problem situation all you need do is throw your data into a computer and let it do its thing. The further they travel along this road of thought the more we can expect misunderstanding of statistics and when it comes to publication statistical junk I believe that the only way to change the direction of this road of thought is to incorporate into our teaching of basic statistics what is feasible of the necessities of statistics education. For further discussion of the necessities of basic statistics education I recommend the book I coauthored with my colleagues Irwin Kabus and Mitchell Preiss *Statistics: Basic Principles and Applications* 2nd ed Kendall Hunt Publishing Co 2000 or the revised 2nd ed W J Adams Xlibris 2009.
