Raptors Keith L. Bildstein, 2017-05-02
Raptors are formally classified into five families and include birds such as eagles, ospreys, kites, true hawks, buzzards, harriers, vultures, and falcons that are familiar and recognized by many observers. These diurnal birds of prey are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat.

and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits, and long distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance not only as ecological entities but also as inspirational tokens across natural and human dominated landscapes. His book offers a comprehensive and accessible account of raptors including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology, and feeding behavior, and threats to their survival in a human dominated world. Biologically sound but readable, *Raptors* is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk watchers, science educators, schoolchildren, and the general public, along with new students in the field of raptor biology, to understand and appreciate these birds and, in so doing, better protect them.

A field guide : key species in Lebanon & Jordan IUCN Regional Office for West Asia

(ROWA), 2015-12-01. This field guide aims at giving comprehensive information about the key species endangered, vulnerable, or critically endangered in Lebanese and Jordanian protected areas of the MEET project.

A Field Guide to the Raptors of Europe, the Middle East, and North Africa William S. Clark, 1999. In this thorough new identification guide, author Bill Clark presents the latest information on tried and tested field marks for the diurnal raptors, both perched and in flight, making this book essential for all ornithologists or any bird watcher who wants to identify these extraordinary birds.

Flight Identification of Raptors of Europe, North Africa and the Middle East Dick Forsman, 2016-02-25. This book is the ultimate flight identification guide for the raptors of the Western Palearctic, covering Europe, North Africa, the Middle East, including Arabia, to Central Asia. Raptors are notoriously hard to identify, even if seen well, and represent perhaps the toughest of all ID challenges for birders. This guide provides identification information for all 60 species that regularly occur in the region to subspecific level. The text covers every plumage and age in detail, with each species account accompanied by a range of photographs covering all the principal plumages. Based on this stunning photographic coverage, most of which has never been published before, this book represents a landmark in bird identification books and a major work for all raptor enthusiasts.
