Proceedings of the Literary & Philosophical Society of Liverpool Literary and Philosophical Society of Liverpool,1854 *The Apteryx* ,1905 Information and Randomness Cristian S. Calude,2013-03-09 The first edition of the monograph *Information and Randomness An Algorithmic Perspective* by Cristian Calude was published in 1994 In my Foreword I said The research in algorithmic information theory is already some 30 years old However only the recent years have witnessed a really vigorous growth in this area The present book by Calude fits very well in our series Much original research is presented making the approach richer in consequences than the classical one Remarkably however the text is so self contained and coherent that the book may also serve as a textbook All proofs are given in the book and thus it is not necessary to consult other sources for classroom instruction The vigorous growth in the study of algorithmic information theory has continued during the past few years which is clearly visible in the present second edition Many new results examples exercises and open problems have been added The additions include two entirely new chapters Computably Enumerable Random Reals and Randomness and Incompleteness The really comprehensive new bibliography makes the book very valuable for a researcher The new results about the characterization of computably enumerable random reals as well as the fascinating Omega Numbers should contribute much to the value of the book as a textbook The author has been directly involved in these results that have appeared in the prestigious journals *Nature* *New Scientist* and *Pour la Science*
