Rational Constructions Of Modules For Simple Lie Algebras Contemporary Mathematics:

Rational Constructions of Modules for Simple Lie Algebras George B. Seligman, 1981 Suitable for researchers in Lie theory and in the theory of linear algebra associative or otherwise and to graduate students who have had some background in one or more of these areas *Azumaya Algebras, Actions, and Modules* Darrell Haile, 1992 This volume contains the proceedings of a conference in honor of Goro Azumaya's seventieth birthday held at Indiana University of Bloomington in May 1990 Professor Azumaya who has been on the faculty of Indiana University since 1968 has made many important contributions to modern abstract algebra His introduction and investigation of what have come to be known as Azumaya algebras subsequently stimulated much research on such rings and algebras as well as applications to geometry and number theory In addition to honoring Professor Azumaya's contributions the conference was intended to stimulate interaction among three areas of his research interests Azumaya algebras group and Hopf algebra actions and module theory Aimed at researchers in algebra this volume contains contributions by some of the leaders in these areas **Structure of the Standard Modules for the Affine Lie Algebra $A^{(1)}_1$** James Lepowsky, Mirko Primc, 1985 The affine Kac Moody algebra $A^{(1)}_1$ has served as a source of ideas in the representation theory of infinite dimensional affine Lie algebras This book develops the calculus of vertex operators to solve the problem of constructing all the standard $A^{(1)}_1$ modules in the homogeneous **Integral Bases for Affine Lie Algebras and Their Universal Enveloping Algebras** David Mitzman, 1985 A revised version of the author's PhD thesis written under the supervision of J Lepowsky at Rutgers University in 1983 Algebraists' Homage: Papers in Ring Theory and Related Topics Shimshon A. Amitsur, David J. Saltman, George B. Seligman, 1982 *Mathematical Applications of Category Theory* American Mathematical Society. Meeting, John Walker Gray, 1984 Contains the proceedings of the AMS Summer Research Conference on Axiomatic Set Theory held in Boulder Colorado June 19-25 1983 This work covers the various areas of set theory including constructibility forcing combinatorics and descriptive set theory **Proceedings of the Northwestern Homotopy Theory Conference** Haynes R. Miller, Stewart Priddy, 1983 Proceedings of the Conference on Banach Algebras and Several Complex Variables Frederick P. Greenleaf, Denny Gulick, 1984 Contains papers presented at the conference on Banach Algebras and Several Complex Variables held June 21-24 1983 to honor Professor Charles E Rickart upon his retirement from Yale University This work includes articles that present advances in topics related to Banach algebras function algebras and infinite dimensional holomorphy **Combinatorial Methods in Topology and Algebraic Geometry** John R. Harper, Richard Mandelbaum, 1985 This collection marks the recent resurgence of interest in combinatorial methods resulting from their deep and diverse applications both in topology and algebraic geometry Nearly thirty mathematicians met at the University of Rochester in 1982 to survey several of the areas where combinatorial methods are proving especially fruitful topology and combinatorial group theory knot theory 3 manifolds homotopy theory and infinite dimensional topology and four manifolds

and algebraic surfaces This material is accessible to advanced graduate students with a general course in algebraic topology along with some work in combinatorial group theory and geometric topology as well as to established mathematicians with interests in these areas For both student and professional mathematicians the book provides practical suggestions for research directions still to be explored as well as the aesthetic pleasures of seeing the interplay between algebra and topology which is characteristic of this field In several areas the book contains the first general exposition published on the subject In topology for example the editors have included M Cohen W Metzler and K Sauerma n s article on Collapses of K times I and group presentations and Metzler s On the Andrews Curtis Conjecture and related problems In addition J M Montesino has provided summary articles on both 3 and 4 manifolds

Enumerative Algebraic Geometry Steven L. Kleiman, Anders Thorup, 1991 1989 marked the 150th anniversary of the birth of the great Danish mathematician Hieronymus George Zeuthen Zeuthen s name is known to every algebraic geometer because of his discovery of a basic invariant of surfaces However he also did fundamental research in intersection theory enumerative geometry and the projective geometry of curves and surfaces Zeuthen s extraordinary devotion to his subject his characteristic depth thoroughness and clarity of thought and his precise and succinct writing style are truly inspiring During the past ten years or so algebraic geometers have reexamined Zeuthen s work drawing from it inspiration and new directions for development in the field The 1989 Zeuthen Symposium held in the summer of 1989 at the Mathematical Institute of the University of Copenhagen provided a historic opportunity for mathematicians to gather and examine those areas in contemporary mathematical research which have evolved from Zeuthen s fruitful ideas This volume containing papers presented during the symposium as well as others inspired by it illuminates some currently active areas of research in enumerative algebraic geometry
