Reasons for Logic, Logic for Reasons Ulf Hlobil, Robert B. Brandom, 2024-07-15 Reasons for Logic Logic for Reasons presents a philosophical conception of logic logical expressivism according to which the role of logic is to make explicit reason relations which are often neither monotonic nor transitive This conception of logic reveals new and enlightening perspectives on inferential roles sequent calculi representation truthmakers and many extant logical theories The book shows how we can understand different metavocabularies as making explicit the same reason relations namely normative pragmatic alethic representational logical and implication space metavocabularies This includes a philosophical account of the pragmatic role of reason relations treatments of nonmonotonic and nontransitive consequence relations in sequent calculi a correspondence between these sequent calculi and variants of truthmaker theory and the introduction of a novel kind of formal semantics that interprets sentences by assigning inferential roles to them The book thus offers logical expressivists and semantic inferentialists new ways to understand logic content inferential roles representation and reason relations This book will appeal to researchers and graduate students who are interested in the philosophy of logic in reasons and reasoning in theories of meaning and content or in nonmonotonic and nontransitive logics

Conflicting Values Michael Stocker,1992-10-01 Plural values and conflicting values are often held to be conceptually problematic threatening the very possibility of ethics or at least of rational ethics This book rejects this view The author first demonstrates why it is so important to understand the issues raised by plural and conflicting values This includes a full discussion of Aristotle s treatment of the issues He then goes on to show that plurality and conflict are commonplace and generally unproblematic features of our everyday choice and action and that they do allow for a sound and rational ethic

Unsettled Thoughts Julia Staffel,2019-12-12 How should thinkers cope with uncertainty What makes their degrees of belief rational and how should they reason about uncertain matters In epistemology recent research has attempted to answer these questions by developing formal models of ideally rational credences However we know from psychological research that perfect rationality is unattainable for human thinkers and so this raises the question of how rational ideals can apply to human thinkers A popular reply is that the more a thinker s imperfectly rational credences approximate compliance with norms of ideal rationality the better But what exactly does this mean Why is it better to be less irrational if we can t ever be completely rational And what does being closer to ideally rational amount to If ideal models of rationality are supposed to help us understand the rationality of human imperfect thinkers we need answers to these questions Unsettled Thoughts breaks new ground in the study of rationality in providing these answers we can explain why it s better to be less irrational because less irrational degrees of belief are generally more accurate and better at guiding our actions Moreover the way in which approximating ideal rationality is beneficial can be made formally precise by using a variety of distance measures that track the benefits of being more rational

Love, Friendship, and the Self Bennett W. Helm,2010-01-07 Recent Western thought has consistently emphasized the individualistic strand in our understanding of persons at the expense of the social strand Thus it is generally thought that persons are self determining and autonomous where these are understood to be capacities we exercise most fully on our own apart from others whose influence on us tends to undermine that autonomy Love Friendship and the Self argues that we must reject a strongly individualistic conception of persons if we are to make sense of significant interpersonal relationships and the importance they can have in our lives It presents a new account of love as intimate identification and of friendship as a kind of plural agency in each case grounding and analyzing these notions

in terms of interpersonal emotions At the center of this account is an analysis of how our emotional connectedness with others is essential to our very capacities for autonomy and self determination we are rational and autonomous only because of and through our inherently social nature By focusing on the role that relationships of love and friendship have both in the initial formation of our selves and in the on going development and maturation of adult persons Helm significantly alters our understanding of persons and the kind of psychology we persons have as moral and social beings
