Sampling Modeling Biological Populations:

Sampling and Modeling Biological Populations and Population Dynamics G. P. Patil, E. C. Pielou, W. E. Waters, 1976

Three Examples of Modeling and Sampling Biological Populations Vallerie Ims Cullinan, 1984 **Sampling and**

modeling biological populations and population dynamics : based on the proceedings of the International

Symposium on Statistical Ecology, New Haven, Conn., Aug, 1969 Ganapati P. Patil, 1971 Modelling Biological

Populations in Space and Time Eric Renshaw, 1993-08-26 This volume develops a unifying approach to population studies

emphasising the interplay between modelling and experimentation Throughout mathematicians and biologists are provided with a framework within which population dynamics can be fully explored and understood Aspects of population dynamics covered include birth death and logistic processes competition and predator prey relationships chaos reaction time delays fluctuating environments spatial systems velocities of spread epidemics and spatial branching structures Both deterministic and stochastic models are considered Whilst the more theoretically orientated sections will appeal to mathematical biologists the material is presented so that readers with little mathematical expertise can bypass these without losing the main flow of the text **Statistical Ecology** G. P. Patil, E. C. Pielou, W. E. Waters, 1971 Population Genetics Matthew B.

Hamilton, 2011-09-23 This book aims to make population genetics approachable logical and easily understood To achieve these goals the book's design emphasizes well explained introductions to key principles and predictions These are augmented with case studies as well as illustrations along with introductions to classical hypotheses and debates Pedagogical features in the text include Interact boxes that guide readers step by step through computer simulations using public domain software Math boxes that fully explain mathematical derivations Methods boxes that give insight into the use of actual genetic data Numerous Problem boxes are integrated into the text to reinforce concepts as they are encountered Dedicated website at www.wiley.com/go/hamiltongenetics This text also offers a highly accessible introduction to coalescent theory the major conceptual advance in population genetics of the last two decades **Sampling Methods for Multiresource Forest**

Inventory Hans T. Schreuder, Timothy G. Gregoire, Geoffrey B. Wood, 1993-04-16 Designed to aid readers in gathering the most reliable quantitative information on forests for the least cost Thoroughly explains the interrelationships between

sampling strategies discusses forestry techniques of efficient tactics examines new developments in statistics having immediate applications in forestry and describes related developments that should have relevance in the future Includes practical methods for dealing with forest data such as tree number height diameter and marketable wood Also contains

problem sets Capture-recapture and Removal Methods for Sampling Closed Populations Gary C. White, 1982 The problem of estimating animal abundance is common in wildlife management and environmental impact assessment Capture recapture and removal methods are often used to estimate population size Statistical Inference From Capture Data On Closed Animal Populations a monograph by Otis et al 1978 provides us with a comprehensive synthesis of much of the wildlife and statistical

literature on the methods as well as some extensions of the general theory In our primer we focus on capture recapture and removal methods for trapping studies in which a population is assumed to be closed and do not treat open population models such as the Jolly Seber model or catch effort methods in any detail The primer written for students interested in population estimation is intended for use with the more theoretical monograph *Quantitative Plant Ecology* Peter Greig-Smith, 1983-01-01

Modeling Demographic Processes in Marked Populations David L. Thomson, Evan G. Cooch, Michael J. Conroy, 2008-12-11 Here biologists and statisticians come together in an interdisciplinary synthesis with the aim of developing new methods to overcome the most significant challenges and constraints faced by quantitative biologists seeking to model demographic rates *Design and Analysis of Long-term Ecological Monitoring Studies* Robert A. Gitzen, 2012-06-07

Comprehensive and multidisciplinary coverage of fundamental and advanced statistical tools and issues relevant to long term ecological monitoring **Advances in Combinatorial Methods and Applications to Probability and Statistics** N Balakrishnan, 1997-05-01 Sri Gopal Mohanty has made pioneering contributions to lattice path counting and its applications to probability and statistics This is clearly evident from his lifetime publications list and the numerous citations his publications have received over the past three decades My association with him began in 1982 when I came to McMaster University Since then I have been associated with him on many different issues at professional as well as cultural levels I have benefited greatly from him on both these grounds I have enjoyed very much being his colleague in the statistics group here at McMaster University and also as his friend While I admire him for his honesty sincerity and dedication I appreciate very much his kindness modesty and broad mindedness Aside from our common interest in mathematics and statistics we both have great love for Indian classical music and dance We have spent numerous many different subjects associated with the Indian music and hours discussing dance I still remember fondly the long drive to Amherst Massachusetts I had a few years ago with him and his wife Shantimayee and all the hearty discussions we had during that journey Combinatorics and applications of combinatorial methods in probability and statistics has become a very active and fertile area of research in the recent past **Methods For Monitoring Tiger And Prey Populations** K. Ullas

Karanth, James D. Nichols, 2017-10-26 This book addresses issues of monitoring populations of tigers ungulate prey species and habitat occupancy with relevance to similar assessments of large mammal species and general biodiversity It covers issues of rigorous sampling modeling estimation and adaptive management of animal populations using cutting edge tools such as camera traps genetic identification and Geographic Information Systems GIS applied under the modern statistical approach of Bayesian and likelihood based inference Of special focus here are animal survey data derived for use under spatial capture recapture occupancy distance sampling mixture modeling and connectivity analyses Because tigers are an icons of global conservation in last five decades enormous amounts of commitment and resources have been invested by tiger range countries and the conservation community for saving wild tigers However status of the big cat remains precarious

Rigorous monitoring of surviving wild tiger populations continues to be essential for both understanding and recovering wild tigers. However, many tiger monitoring programs lack the necessary rigor to generate the reliable results. While the deployment of technologies, analyses, computing power, and human resource investments in tiger monitoring have greatly progressed in the last couple of decades, a full comprehension of their correct deployment has not kept pace in practice. In this volume, Dr. Ullas Karanth and Dr. James Nichols, world leaders in tiger biology and quantitative ecology, respectively, address this key challenge. They have collaborated with an extraordinary array of 30 scientists with expertise in a range of necessary disciplines: biology and ecology of tigers, prey, and habitats; advanced statistical theory and practice; computation and programming; practical field sampling methods that employ technologies as varied as camera traps, genetic analyses, and geographic information systems. The book is a tour de force of cutting-edge methodologies for assessing not just tigers but also other predators and their prey. The 14 chapters here are lucidly presented in a coherent sequence to provide tiger-specific answers to fundamental questions in animal population assessment: why monitor, what to monitor, and how to monitor. While highlighting robust methods, the authors also clearly point out those that are in use but unreliable. The managerial dimension of tiger conservation described here, the task of matching monitoring objectives with skills and resources to integrate tiger conservation under an adaptive framework, also renders this volume useful to wildlife scientists as well as conservationists.

Analysis and Management of Animal Populations Byron K. Williams, James D. Nichols, Michael J. Conroy, 2002-05-16. *Analysis and Management of Animal Populations* deals with the processes involved in making informed decisions about the management of animal populations. It covers the modeling of population responses to management actions, the estimation of quantities needed in the modeling effort, and the application of these estimates and models to the development of sound management decisions. The book synthesizes and integrates in a single volume the methods associated with these themes as they apply to ecological assessment and conservation of animal populations. It integrates population modeling, parameter estimation, and decision-theoretic approaches to management in a single cohesive framework. Provides authoritative state-of-the-art descriptions of quantitative approaches to modeling, estimation, and decision making. Emphasizes the role of mathematical modeling in the conduct of science and management. Utilizes a unifying biological context, consistent mathematical notation, and numerous biological examples.

Hierarchical Modeling and Inference in Ecology J. Andrew Royle, Robert M. Dorazio, 2008-10-15. *A guide to data collection, modeling, and inference strategies for biological survey data using Bayesian and classical statistical methods.* This book describes a general and flexible framework for modeling and inference in ecological systems based on hierarchical models, with a strict focus on the use of probability models and parametric inference. Hierarchical models represent a paradigm shift in the application of statistics to ecological inference problems because they combine explicit models of ecological system structure or dynamics with models of how ecological systems are observed. The principles of hierarchical modeling are developed and applied to problems in population

metapopulation community and metacommunity systems The book provides the first synthetic treatment of many recent methodological advances in ecological modeling and unifies disparate methods and procedures The authors apply principles of hierarchical modeling to ecological problems including occurrence or occupancy models for estimating species distribution abundance models based on many sampling protocols including distance sampling capture recapture models with individual effects spatial capture recapture models based on camera trapping and related methods population and metapopulation dynamic models models of biodiversity community structure and dynamics Wide variety of examples involving many taxa birds amphibians mammals insects plants Development of classical likelihood based procedures for inference as well as Bayesian methods of analysis Detailed explanations describing the implementation of hierarchical models using freely available software such as R and WinBUGS Computing support in technical appendices in an online companion web site

Handbook of Environmental and Ecological Statistics Alan E. Gelfand,Montserrat Fuentes,Jennifer A. Hoeting,Richard Lyttleton Smith,2019-01-15 This handbook focuses on the enormous literature applying statistical methodology and modelling to environmental and ecological processes The 21st century statistics community has become increasingly interdisciplinary bringing a large collection of modern tools to all areas of application in environmental processes In addition the environmental community has substantially increased its scope of data collection including observational data satellite derived data and computer model output The resultant impact in this latter community has been substantial no longer are simple regression and analysis of variance methods adequate The contribution of this handbook is to assemble a state of the art view of this interface Features An internationally regarded editorial team A distinguished collection of contributors A thoroughly contemporary treatment of a substantial interdisciplinary interface Written to engage both statisticians as well as quantitative environmental researchers 34 chapters covering methodology ecological processes environmental exposure and statistical methods in climate science **Marine Mammal Survey and Assessment Methods** J.L Laake,D.G.

Robertson,Steven C. Amstrup,B.F.J Manly,2021-06-09 This volume comprises the proceedings of a symposium on marine mammal survey assessment methods which took place in Seattle Washington USA Quantitative Methods for Current Environmental Issues Clive W. Anderson,Vic Barnett,Philip C. Chatwin,Abdel H. El-Shaarawi,2012-12-06 It is increasingly clear that good quantitative work in the environmental sciences must be genuinely interdisciplinary This volume the proceedings of the first combined TIES SPRUCE conference held at the University of Sheffield in September 2000 well demonstrates the truth of this assertion highlighting the successful use of both statistics and mathematics in important practical problems It brings together distinguished scientists and engineers to present the most up to date and practical methods for quantitative measurement and prediction and is organised around four themes spatial and temporal models and methods environmental sampling and standards atmosphere and ocean risk and uncertainty Quantitative Methods for Current Environmental Issues is an invaluable resource for statisticians applied mathematicians and researchers working on

environmental problems and for those in government agencies and research institutes involved in the analysis of environmental issues

Respect for the Ancestors Peter N. Jones, 2005 In 1996 on the banks of the Columbia River a 9 300 year old skeleton was found that would become the impetus for the first legal assault on the Native American Graves Protection and Repatriation Act NAGPRA The Kennewick Man as it came to be called put to test whether the American Indian tribes of the area were culturally affiliated with the skeleton as they claim and their oral traditions affirm or whether the skeleton was affiliated with a people who are no longer present At the same time another 9 000 year old skeleton was found in the storage facility of the Nevada State Museum where it had gone unnoticed for the past 50 years Like the Kennewick Man the Spirit Cave Mummy also brought to fore the question of cultural affiliation between contemporary American Indian tribes of the western Great Basin and those people who resided in the area during the Late Pleistocene and Early Holocene Cultural anthropologist Peter N Jones tackles these contentious questions in this landmark study *Respect for the Ancestors* For the first time in a single work the question of cultural affiliation between the present day American Indians of the American West and the people of the distant past is examined using multiple lines of evidence Out of this comprehensive study a picture of continuous cultural evolution and adaptation between the peoples of the ancient past and those of the present day emerges from the evidence Further important implications for the field of anthropology are discussed as a result of this benchmark study Anyone working in the American West today will benefit from this book

Reintroduction Biology John G. Ewen, Doug P. Armstrong, Kevin A. Parker, Philip J. Seddon, 2012-01-30 This book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the IUCN SSC Re introduction Specialist Group Using an issue based framework that purposely avoids a structure based on case studies the book's central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives Issues covered include husbandry and intensive management monitoring and genetic and health management Although taxonomically neutral there is a recognised dominance of bird and mammal studies that reflects the published research in this field The structure and content are designed for use by people wanting to bridge the research management gap such as conservation managers wanting to expand their thinking about reintroduction related decisions or researchers who seek to make useful applied contributions to reintroduction
