advanced creatures from simple primitive ones This vertical dimension of evolution has been downplayed in large part because it was in the past associated with unsavory political views This avoidance has however left evolutionary biology open to the perception that it deals merely with the diversification of similar creatures all at the same level of advancedness from a common ancestor for example the classic case studies of finches with different beaks The latest incarnation of creationism dubbed Intelligent Design or ID has taken advantage of this It portrays an evolutionary process that is guided especially in its upward direction by the hand of an unseen Creator to ensure that it ends up producing humans This book builds a persuasive picture of how unaided evolution produces advanced creatures from simple ones by an essentially accidental process From publisher description
