Sec Science Physics:

Designing and Teaching the Secondary Science Methods Course Aaron J. Sickel, Stephen B. Witzig, 2017-04-13 The improvement of science education is a common goal worldwide. Countries not only seek to increase the number of individuals pursuing careers in science but to improve scientific literacy among the general population. As the teacher is one of the greatest influences on student learning, a focus on the preparation of science teachers is essential in achieving these outcomes. A critical component of science teacher education is the methods course where pedagogy and content coalesce. It is here that future science teachers begin to focus simultaneously on the knowledge, dispositions, and skills for teaching secondary science in meaningful and effective ways. This book provides a comparison of secondary science methods courses from teacher education programs all over the world. Each chapter provides detailed descriptions of the national context, course design, teaching strategies, and assessments used within a particular science methods course and is written by teacher educators who actively research science teacher education. The final chapter provides a synthesis of common themes and unique features across contexts and offers directions for future research on science methods courses. This book offers a unique combination of behind-the-scenes thinking for secondary science methods course designs along with practical teaching and assessment strategies and will be a useful resource for teacher educators in a variety of international contexts.

High schools call for a deeper understanding of what it takes to prepare and support successful teachers. On September 21, 2006, KSTF convened a group of 41 individuals with a broad range of perspectives and expertise to address three essential questions with regard to secondary science teacher preparation: What do we know? What do we need to find out? and what research will help us fill in

the gaps Participants were intentionally selected from a diverse cross section of the education community and included teachers educational researchers teacher educators policy specialists and scientists The 41 participants formed 12 working groups and spent two and a half days addressing the following aspects of teacher preparation recruitment and retention models of secondary science teacher preparation pedagogic preparation including field based experiences methods courses and preparing teachers for diverse populations content preparation in biology chemistry Earth science and physics as well as the nature of science in general induction mentoring Each working group was tasked with synthesizing their discussions and conclusions for the entire group of conference participants and in a written document This volume represents the final outcome of that conference 12 chapters that reflect the work of 40 dedicated scholars and practitioners who share a deep commitment to the pursuit of excellence in the preparation of secondary science teachers
