*Louis S.B. Leakey* Martin Pickford, 1997 This text offers evidence to suggest that many of the established theories and ideas regarding East African geology and anthropology are fundamentally flawed It also offers solutions to safeguard future research and discoveries in these areas

**The Cancer Chronicles** George Johnson, 2013-08-27 When the woman he loved was diagnosed with a metastatic cancer science writer George Johnson embarked on a journey to learn everything he could about the disease and the people who dedicate their lives to understanding and combating it What he discovered is a revolution under way an explosion of new ideas about what cancer really is and where it comes from In a provocative and intellectually vibrant exploration he takes us on an adventure through the history and recent advances of cancer research that will challenge everything you thought you knew about the disease Deftly excavating and illuminating decades of investigation and analysis he reveals what we know and don't know about cancer showing why a cure remains such a slippery concept We follow him as he combs through the realms of epidemiology clinical trials laboratory experiments and scientific hypotheses rooted in every discipline from evolutionary biology to game theory and physics Cogently extracting fact from a towering canon of myth and hype he describes tumors that evolve like alien creatures inside the body paleo oncologists who uncover petrified tumors clinging to the skeletons of dinosaurs and ancient human ancestors and the surprising reversals in science's comprehension of the causes of cancer with the foods we eat and environmental toxins playing a lesser role Perhaps most fascinating of all is how cancer borrows natural processes involved in the healing of a wound or the unfolding of a human embryo and turns them jujitsu like against the body Throughout his pursuit Johnson clarifies the human experience of cancer with elegiac grace bearing witness to the punishing gauntlet of consultations surgeries targeted therapies and other treatments He finds compassion solace and community among a vast network of patients and professionals committed to the fight and wrestles to comprehend the cruel randomness cancer metes out in his own family For anyone whose life has been affected by cancer and has found themselves asking why this book provides a new understanding In good company with the works of Atul Gawande Siddhartha Mukherjee and Abraham Verghese **The Cancer Chronicles** is endlessly surprising and as radiant in its prose as it is authoritative in its eye opening science

**Rethinking Evolution in the Museum** Monique Scott, 2007-11-19 **Rethinking Evolution in the Museum** explores the ways diverse natural history museum audiences imagine their evolutionary heritage In particular the book considers how the meanings constructed by audiences of museum exhibitions are a product of dynamic interplay between museum iconography and powerful images museum visitors bring with them to the museum In doing so the book illustrates how the preconceived images held by museum audiences about anthropology Africa and the museum itself strongly impact the human origins exhibition experience Although museological theory has come increasingly to recognize that museum audiences make meaning in exhibitions or make their own complex interpretations of museum exhibitions few scholars have explicitly asked

how Rethinking Evolution in the Museum however provides a rare window into visitor perceptions at four world class museums the Natural History Museum and Horniman Museum in London the National Museums of Kenya in Nairobi and the American Museum of Natural History in New York Through rigorous and novel mixed methods quantitative and qualitative covering nearly 500 museum visitors this innovative study shows that audiences of human origins exhibitions interpret evolution exhibitions through a profoundly complex convergence of personal political intellectual emotional and cultural interpretive strategies This book also reveals that natural history museum visitors often respond to museum exhibitions similarly because they use common cultural tools picked up from globalized popular media circulating outside of the museum One tool of particular interest is the notion that human evolution has proceeded linearly from a bestial African prehistory to a civilized European present Despite critical growths in anthropological science and museum displays the outdated Victorian progress motif lingers persistently in popular media and the popular imagination Rethinking Evolution in the Museum sheds light on our relationship with natural history museums and will be crucial to those people interested in understanding the connection between the visitor the museum and media culture outside of the museum context Human Evolution Brian Regal,2004-11-23 A fascinating and wide ranging look at the controversies surrounding the search for the origins of the human species Written for those new to the subject Human Evolution A Guide to the Debates presents the remarkable history of our understanding of human origins as it developed from the 1800s to the present Most works on this topic focus narrowly on one individual theory or debate In contrast Human Evolution draws from a wide range of sources to offer a fully rounded portrait of the entire field The chapters of the book follow a basic chronological order covering the issues personalities and discoveries that are central to the questions and controversies surrounding human evolution The coverage draws from a wide range of associated topics and examines not only controversies of a religious nature but also those that have little to do with religion allowing readers to weigh the information come to their own conclusions and even begin their own debates **The First Human** Ann Gibbons,2007-04-10 In this dynamic account award winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions When and where was the dawn of humankind Following four intensely competitive international teams of scientists in a heated race to find the missing link the fossil of the earliest human ancestor Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters Tim White the irreverent Californian who discovered the partial skeleton of a primate that lived 4 4 million years ago in Ethiopia French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago and two other groups one led by zoologist Meave Leakey the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut who enter the race with landmark discoveries of their own Through scrupulous research and vivid first person reporting The First Human reveals the perils and the promises of fossil hunting on a grand competitive scale *The Laws of Software Process* Phillip G. Armour,2003-09-25 Within one generation software has become one of the principal

sources of wealth in the world The development and use of software has grown faster than for any artifact in the history of the world Probably no topic or subject in history has accelerated in its rate of practice as software has Software development now needs to mature into a disciplined activity to overcome the difficulties that have traditionally plagued it Software developers engineers and project managers need a reference that describes the evolution of software where it has been and where it is going The Laws of Software Process A New Model for the Production and Management of Software reveals a novel and compelling structure for development that redefines the very nature and purpose of software The author explains how in the modern knowledge economy software systems are not products in the classical sense but is the modern medium for the conveyance of information Literally software is the currency of the knowledge basis of wealth in today s society From this definition flows a new assessment of the basics of software development the purpose of methods and processes a comparison of programming languages and an analysis of quality management cost estimation and project management and completion The groundbreaking perspective outlined in this book serves as an expert guide for successful planning and execution of development projects

*Palaeontology in Public* Chris Manias, 2025-01-21 Since the establishment of concepts of deep time in the late eighteenth and early nineteenth centuries palaeontology has been one of the most high profile sciences Dinosaurs mammoths human ancestors and other lost creatures from Earth s history are some of the most prominent icons of science and are essential for our understanding of nature and time Palaeontology and its practitioners have had a huge impact on public understandings of science despite their often precarious and unsteady position within scientific institutions and networks *Palaeontology in Public* considers the connections between palaeontology and public culture across the past two centuries In so doing it explores how these public dimensions have been crucial to the development of palaeontology and indeed how they conditioned wider views of science nature the environment time and the world The book provides a history of vertebrate palaeontology through a series of compelling case studies Dinosaurs feature of course including Spinosaurus Winsor McCay s Gertie the Dinosaur and the creatures of Jurassic Park and The Lost World But there are also the small mammals of the Mesozoic South American Glyptodons and human ancestors like Neanderthals and Australopithecines This book shows how palaeontology is defined by its relationship with public audiences and how this connection is central to our vision of the past and future of the Earth and its inhabitants Praise for *Palaeontology in Public* Surely there is a one way traffic from science to the media In this remarkable collection of papers Chris Manias and the authors explore palaeontological themes from the origin of life to interpretations of human culture through dinosaurs of course and many other fossil taxa Michael J Benton OBE FRS FRSE University of Bristol *Palaeontology* is a strange science at times arcane yet so accessible that many children dream of hunting for dinosaurs among sun beaten badlands *Palaeontology in Public* digs into the overlap of these two realms and offers a much needed exploration of how prehistoric beings emerge from stone and enter our collective imagination Riley Black author of *Last Days of the Dinosaurs* and *When the Earth Was*

Green In this sweeping multi authored compilation reviews consider how ancient animals have been presented to the public for good or for ill From Lucy the australopithecine to Gertie the dinosaur and Jurassic Park never before has so much scholarly content on palaeontology s popularisation been amassed in a single volume Darren Naish vertebrate palaeontologist and author *New Geospatial Approaches to the Anthropological Sciences* Robert L. Anemone, Glenn C. Conroy, 2018-07-15 Spatial analysis reaches across all the subdisciplines of anthropology A cultural anthropologist for example can use such analysis to trace the extent of distinctive cultural practices an archaeologist can use it to understand the organization of ancient irrigation systems a primatologist to quantify the density of primate nesting sites a paleoanthropologist to explore vast fossil bearing landscapes Arguing that geospatial analysis holds great promise for much anthropological inquiry the contributors have designed this volume to show how the powerful tools of GIScience can be used to benefit a variety of research programs This volume brings together scholars who are currently applying state of the art tools techniques and methods of geographical information sciences GIScience to diverse data sets of anthropological interest Their questions crosscut the typical silos that so often limit scholarly communication among anthropologists and instead recognize a deep structural similarity between the kinds of questions anthropologists ask the data they collect and the analytical models and paradigms they each use

**Extinctions** Michael J. Benton, 2023-10-17 A journey through the great mass extinction events that have shaped our Earth This timely and original book lays out the latest scientific understanding of mass extinction on our planet Cutting edge techniques across biology chemistry physics and geology have transformed our understanding of the deep past including the discovery of a previously unknown mass extinction This compelling evidence revealing a series of environmental crises resulting in the near collapse of life on Earth illuminates our current dilemmas in exquisite detail Beginning with the oldest Professor Michael J Benton takes us through the big five die outs the Late Ordovician which set the evolution of the first animals on an entirely new course the Late Devonian apparently brought on by global warming the cataclysmic End Permian also known as the Great Dying which wiped out over 90 percent of all life on Earth the newly discovered Carnian Pluvial Event and the End Cretaceous asteroid He examines how global warming acid rain ocean acidification erupting volcanoes and meteorite impact have affected conditions on Earth and how life survived adapted and evolved Benton s expert retelling of scientific breakthroughs in paleobiology is illustrated throughout with photographs of fossils and fieldwork and artistic reconstructions of ancient environments In *Extinctions* readers will learn about revolutionary new tools used to uncover ancient extinction events and processes in forensic detail and how scientists are improving our understanding of the deep past New research allows us to link long ago upheavals to crises in our current age the Anthropocene with important consequences for us all

**La arqueología de los orígenes humanos en África** Ignacio de la Torre Sáinz, 2008-09-01 Muchos acontecimientos científicos han ocurrido en África desde que Charles Darwin sugiriera en el siglo XIX que los seres humanos se habrían originado en este continente a partir de un antepasado simiesco

03-03-2024, 00:00:00 The Biographical Dictionary of Scientists: Abbe to Leavitt Roy Porter, Marilyn Bailey Ogilvie, 2000 Third Edition Vol 1 Abbe to Leavitt The Science of Human Evolution John H.

Langdon,2016-10-25 This textbook provides a collection of case studies in paleoanthropology demonstrating the method and limitations of science These cases introduce the reader to various problems and illustrate how they have been addressed historically The various topics selected represent important corrections in the field some critical breakthroughs models of good reasoning and experimental design and important ideas emerging from normal science     **The Truth about Human Origins** Brad Harrub,Bert Thompson,2003 Ever since Charles Darwin first published The Origin of Species on November 24 1859 the subject of origins has been one of the most controversial topics around Sadly it also is a subject that is fraught with erroneous theories and concepts Most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept Disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong We believe it is time for someone to offer what renowned news commentator Paul Harvey would call the rest of the story That is what The Truth About Human Origins does It tells the rest of the story as it discusses the scientific facts about mankind s beginning For example it investigates the record of the rocks as that record relates to human evolution It demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types It also examines in an in depth fashion the so called molecular evidence of human evolution     **Animal Sciences: Hab-Pep** Allan B. Cobb,2002 Provides a wide range of scientific historical and cultural information about the animal world Covers careers in the animal sciences in addition to biological concepts the history of zoology biographies of scientists and ethical issues such as the practice of animal experimentation Includes illustrations sidebars charts a glossary bibliographies filmographies and the addresses of institutions devoted to the protection and study of wild and domesticated animals     **AF Press Clips** ,1972-07     **Man, God, and Civilization** John G. Jackson,1990     **Soils of the Past** Gregory J. Retallack,2012-12-06 Landscapes viewed from afar have a timeless quality that is soothing to the human spirit Yet a tranquil wilderness scene is but a snapshot in the steady stream of surficial change Wind water and human activities reshape the landscape by means of gradual to catastrophic and usually irreversible events Much of this change destroys past landscapes but at some times and places landscapes are buried in the rock record This work is dedicated to the discovery of past landscapes and their life through the fossil record of soils A long history of surficial changes extending back almost to the origin of our planet can be deciphered from the study of these buried soils or paleosols Some rudiments of this history and our place in it are outlined in a final section of this book But first it is necessary to learn something of the language of soils of what happens to them when buried in the rock record and which of the forces of nature can be confidently reconstructed from their remains Much of this preliminary material is borrowed from soil science but throughout emphasis is laid on features that provide most reliable evidence of landscapes during the distant geological past This book has evolved primarily as a text for senior level university courses in paleopedology the study of fossil soils     **The British National**
