

Sexual Orientation

The Biological Component:

⌘ Evolutionary considerations:

Premise 1: Sexual desire and romantic love are functionally independent

Premise 2: Romantic love is not intrinsically oriented to same-gender or other-gender partners.

Premise 3: The links between love and desire are bidirectional.

⌘ Heritability estimates account for only about 50% of same-sex orientation. (Twin studies)

⊞ Seem through twin studies.

⊞ Other hormonal effects on human sexuality are difficult to assess because studies are dependent on “experiment of nature” to determine effects.

What is love s real intent Why can love be so ruthlessly selective How is it related to sex beauty and goodness And is the child now the supreme object of love In addressing these questions Simon May develops a radically new understanding of love as the emotion we feel towards whomever or whatever we experience as grounding our life as offering us a possibility of home in a world that we supremely value He sees love as motivated by a promise of ontological rootedness rather than as two thousand years of tradition variously asserts by beauty or goodness by a search for wholeness by virtue by sexual or reproductive desire by compassion or altruism or empathy or in one of today s dominant views by no qualities at all of the loved one After arguing that such founding Western myths as the Odyssey and Abraham s call by God to Canaan in the Bible powerfully exemplify his new conception of love May goes on to re examine the relation of love to beauty sex and goodness in the light of this conception offering among other things a novel theory of beauty and suggesting against Plato that we can love others for their ugliness while also seeing them as beautiful Finally he proposes that in the Western world romantic love is gradually giving way to parental love as the most valued form of love namely the love without which one s life is not deemed complete or truly flourishing May explains why childhood has become sacred and excellence in parenting a paramount ideal as well as a litmus test of society s moral health In doing so he argues that the child is the first genuinely

modern supreme object of love the first to fully reflect what Nietzsche called the death of God Readers will find Love Excitingly new yet immediately recognizable that s the paradox at the very heart of love and it is what Simon May has achieved Los Angeles Review of Books **Bi-sexual Love** Wilhelm Stekel,1922 **Darwin in Atlantic Cultures** Jeannette Eileen Jones,Patrick B. Sharp,2010-06-21 This collection is an interdisciplinary edited volume that examines the circulation of Darwinian ideas in the Atlantic space as they impacted systems of Western thought and culture Specifically the book explores the influence of the principle tenets of Darwinism such as the theory of evolution the ape man theory of human origins and the principle of sexual selection on established transatlantic intellectual traditions and cultural practices In doing so it pays particular attention to how Darwinism reconfigured discourses on race gender and sexuality in a transnational context Covering the period from the publication of The Origin of Species 1859 to 1933 when the Nazis National Socialist Party took power in Germany the essays demonstrate the dissemination of Darwinian thought in the Western world in an unprecedented commerce of ideas not seen since the Protestant Reformation Learned societies literary groups lyceums and churches among other sites for public discourse sponsored lectures on the implications of Darwin s theory of evolution for understanding the very ontological codes by which individuals ordered and made sense of their lives Collectively these gatherings reflected and constituted what the contributing scholars to this volume view as the discursive power of the cultural politics of Darwinism

The Origins of the Love Song Nino Tsitsishvili,2022-11-18 The book offers a radically new perspective on the origins of the love song and human sexuality in an evolutionary context By comparing different human societies and animal species past and present it reveals that love songs romantic love and exclusive pair bonds are not the original evolutionary features of Homo sapiens One of the key findings of the book is that early humans practiced multiple partner sexual relations similar to our closest relatives bonobos and chimpanzees but with the emergence of culture and sexual taboo their behaviour had to adjust It contends that since the exodus from Africa and the rise of culture humans started to distance themselves from the rest of the animal kingdom drastically restraining their innate sexual nature The book will appeal to both scholars and laypeople with an interest in evolutionary theory socio biology anthropology and the origins of culture
