Ramon Y Cajals Contribution To The Neurosciences:

Ramón Y Cajal's Contribution to the Neurosciences Santiago Ramón y Cajal, 1983 **The Beautiful Brain** Larry W. Swanson, Eric Newman, Alfonso Araque, Janet M. Dubinsky, 2017-01-17 At the crossroads of art and science Beautiful Brain presents Nobel Laureate Santiago Ramón y Cajal's contributions to neuroscience through his groundbreaking artistic brain imagery Santiago Ramón y Cajal 1852-1934 was the father of modern neuroscience and an exceptional artist He devoted his life to the anatomy of the brain the body's most complex and mysterious organ His superhuman feats of visualization based on fanatically precise techniques and countless hours at the microscope resulted in some of the most remarkable illustrations in the history of science Beautiful Brain presents a selection of his exquisite drawings of brain cells brain regions and neural circuits with accessible descriptive commentary These drawings are explored from multiple perspectives Larry W Swanson describes Cajal's contributions to neuroscience Lyndel King and Eric Himmel explore his artistic roots and achievement Eric A Newman provides commentary on the drawings and Janet M Dubinsky describes contemporary neuroscience imaging techniques This book is the companion to a traveling exhibition opening at the Weisman Art Museum in Minneapolis in February 2017 marking the first time that many of these works which are housed at the Instituto Cajal in Madrid have been seen outside of Spain Beautiful Brain showcases Cajal's contributions to neuroscience explores his artistic roots and achievement and looks at his work in relation to contemporary neuroscience imaging appealing to general readers and professionals alike *New Ideas on the Structure of the Nervous System in Man and Vertebrates* Larry W. Swanson, Y Cajal Santiago Ramon, Neely Swanson, 1990-08-10 Santiago Ramón y Cajal 1852-1934 is widely thought of as the founder of modern neuroscience and his work is more frequently cited than that of any other scientist in the field In this seminal book Cajal summarized for a broad audience the modern cellular view of brain organization This clear direct and accurate translation provides an excellent introduction to Cajal's work making accessible for the first time the ideas that led Cajal to favor the neuron doctrine that revolutionized neuroscience and won for him with his rival Camillo Golgi the Nobel Prize in medicine in 1906 *New Ideas on the Structure of the Nervous System in Man and Vertebrates* presents the histological evidence for the laws governing the form and connections of nerve cells This work and the principles that emerged from it formed the cornerstone for our current understanding of how the nervous system is organized The book also presents in simplified form the ideas contained in Cajal's famous survey of vertebrate neurohistology *Histologie du Systeme Nerveux de l'Homme et des Vertébrés* unquestionably the most important book ever published in neuroanatomy and which to this day has not been translated and published in English because of its extraordinary length Neely Swanson is a scholar of romance languages Larry W Swanson is Senior Member of the Salk Institute Adjunct Professor in the Department of Neurosciences at the University of California San Diego and Investigator of the Howard Hughes Medical Institute **Foundations of Neuroscience** Marcus Jacobson, 2013-11-11 The author makes a unique contribution to the field by discussing the history

and philosophy of the neurosciences and then developing critical approaches which integrate techniques theory and ethics Taken as a whole Jacobson s work will provide a coherent and humane framework for future research programs The paperback edition of this highly successful text first published in 1993 is now available The author brings the ethics of neuroscience into a closer relationship with empirical research Covering the field s history philosophy theories and techniques this volume provides the necessary moral and ethical framework to evaluate neuroscience research The Major Discoveries of Cajal and His Disciples: Consolidated Milestones for the Neuroscience of the XXIst Century Fernando de Castro, Miguel A. Merchán, 2017-04-25 When Santiago Ram n y Cajal started to unravel the fine structure of the nervous system in the last decades of the XIXth century maybe only his unbeatable soul of brave Spaniard imagined that most of the descriptions were scientific truths that lasted to date Simple histological stainings curiosity to ameliorate these monocular microscopes patience for drawing his observations and a rich imaginative open mind this is the recipe for Cajal success His descriptions of connectivity in the nervous system compiled in Cajal s opus magna published in 1904 *Textura del sistema nervioso del hombre y los vertebrados* and 1911 *Histologie du systeme nerveux* have been corroborated by modern techniques decade after decade Even more the main hypothesis that Cajal raised are universally recognised as biological laws today the neuron theory the law on the dynamic polarization of the neuron and the chemotropic hypothesis That is the nervous system is not a sincitial network but is formed by individual cells the transmission of the nerve impulses follow a main direction within a given neuron the axons are guided by chemical substances in a chemotropic way till form synapses with their targets Attracted by Cajal s strong personality and scientific success a number of medical students and doctors join him in the crusade to explore the nervous system And the seed planted by the universal savant was really successful Francisco Tello described interesting aspects of the regeneration of peripheral nerves which are very useful for neuroscientist currently working in this topic Nicol s Ach carro significantly contributed to study neuroglia and future microglia P o del R o Horteaga identified two out of the four main nervous cell types the oligodendrocytes and microglia and proposed an almost still valid classification for the CNS tumours Fernando de Castro made was the first description of arterial chemoreceptors in the carotid body Rafael Lorente de N was a dominant figure of Neuroscience for decades after the IInd World War first describing the columnar organization of the cerebral cortex well before Mountcastle Hubbel and Wiesel Even less recognised co workers and disciples of Cajal his brother Pedro Ram n y Cajal Domingo S nchez the neurologist Rodr guez Lafora protagonised discoveries that are consolidated scientific truths today Altogether it is difficult if not impossible to find a school in biology contributing in such a fundamental and varied way to the common acervo like the collectively known as Cajal School or Spanish Neurological School Although the particular way to work of the Maestro selecting a pleiade of brilliant collaborators with whom accomplish such a titanic feat giving them freedom for their studies has been recognised and confronted to antagonic systems followed by other relevant scientists and scientific schools the

general recognition of such a significant major milestones for Neuroscience and their vigency in the well marched XXIst century is not this is the purpose of this Ebook to remind all these examples of how successful can be the scientific work when it is minutious constant and performed by brilliant imaginative and skilled scientists with a minimal conditions supporting their efforts
