Rapid Thermal Processing Of Semiconductors:

Rapid Thermal Processing and beyond: Applications in Semiconductor Processing Wielfried Lerch, Jürgen Niess, 2008-03-24 Special topic volume with invited papers only *Rapid Thermal Processing of Semiconductors* Victor E. Borisenko, Peter J. Hesketh, 2013-11-22 Rapid thermal processing has contributed to the development of single wafer cluster processing tools and other innovations in integrated circuit manufacturing environments Borisenko and Hesketh review theoretical and experimental progress in the field discussing a wide range of materials processes and conditions They thoroughly cover the work of international investigators in the field *Rapid Thermal Processing of Semiconductors* Victor Borisenko, Peter J. Hesketh, 2014-09-01 *Advances in Rapid Thermal and Integrated Processing* F. Roozeboom, 2013-03-09 Rapid thermal and integrated processing is an emerging single wafer technology in ULSI semiconductor manufacturing electrical engineering applied physics and materials science Here the physics and engineering of this technology are discussed at the graduate level Three interrelated areas are covered First the thermophysics of photon induced annealing of semiconductor and related materials including fundamental pyrometry and emissivity issues the modelling of reactor designs and processes and their relation to temperature uniformity Second process integration treating the advances in basic equipment design scale up integrated cluster tool equipment including wafer cleaning and integrated processing Third the deposition and processing of thin epitaxial dielectric and metal films covering selective deposition and epitaxy integrated processing of layer stacks and new areas of potential application such as the processing of III V semiconductor structures and thin film head processing for high density magnetic data storage *Rapid Thermal Processing* A. Slaoui, T. Theiler, J.C. Muller, R.K. Singh, 1999-03-17 Rapid Thermal Processing RTP is a well established single wafer technology in USLI semiconductor manufacturing and electrical engineering as well as in materials science The biggest advantage of RTP is that it eliminates the long ramp up and ramp down times associated with furnaces enabling a significant reduction in the thermal budget Today RTP is in production use for source drain implant annealing contact alloying formation of refractory nitrides and silicides and thin gate dielectric oxide formation The aim of Symposium I was to provide an overview of the latest information on research and development in the different topics cited above The potential applications of RTP in new areas like large area devices such as flat panel displays and solar cells has to be investigated About 30 papers were presented in this symposium The contributions of most interest involved modelling and control junctions formation and thermal oxidation deposition and recrystallisation and silicide formations However the range of topics and the intent to focus on underlying fundamental issues like dopant diffusion in silicon from solid sources strain relaxation and photonic effects nucleation as well as applications to magnetic films and solar cells devices *Rapid Thermal Processing (Rtp) of Semiconductors in Space* National Aeronautics and Space Administration (NASA), 2018-07-10 The progress achieved on the project entitled Rapid Thermal Processing of Semiconductors in Space for a 12 month period of activity ending March 31 1993 is summarized The

activity of this group is being performed under the direct auspices of the ROMPS program. The main objective of this program is to develop and demonstrate the use of advanced robotics in space with rapid thermal process RTP of semiconductors providing the test technology. Rapid thermal processing is an ideal processing step for demonstration purposes since it encompasses many of the characteristics of other processes used in solid state device manufacturing. Furthermore, a low thermal budget is becoming more important in existing manufacturing practice while a low thermal budget is critical to successful processing in space. A secondary objective of this project is to determine the influence of microgravity on the rapid thermal process for a variety of operating modes. In many instances this involves one or more fluid phases. The advancement of microgravity processing science is an important ancillary objective.

Rapid Thermal Processing Richard B. Fair, 2012-12-02 This is the first definitive book on rapid thermal processing RTP, an essential manufacturing technology for single wafer processing in highly controlled environments. Written and edited by nine experts in the field, this book covers a range of topics for academics and engineers alike, moving from basic theory to advanced technology for wafer manufacturing. The book also provides new information on the suitability of RTP for thin film deposition, junction formation, silicides, epitaxy, and in situ processing. Complete discussions on equipment designs and comparisons between RTP and other processing approaches also make this book useful for supplemental information on silicon processing, VLSI processing, and integrated circuit engineering.

Rapid Thermal Processing for Future Semiconductor Devices H. Fukuda, 2003-04-02 This volume is a collection of papers which were presented at the 2001 International Conference on Rapid Thermal Processing RTP 2001 held at Ise Shima, Mie, on November 14-16, 2001. This symposium is the second conference, following the previous successful first International RTP conference held at Hokkaido in 1997. The RTP 2001 covered the latest developments in RTP and other short time processing, continuously aiming to point out the future direction in the Silicon, ULSI devices, and II-VI, III-V compound semiconductor devices. This book covers the following areas: advanced MOS gate stack integration technologies, advanced channel engineering including shallow junction, SiGe heterostructure, novel metallization, interconnect, silicidation, low k materials, thin dielectrics including gate dielectrics, and high k materials, thin film deposition including SiGe, SOI, and SiC process, and device modelling, Laser assisted crystallization, and TFT device fabrication technologies, temperature monitoring, and slip-free technologies.
