David Waugh, Tony Bushell

Longshore Drift:

Geography David Waugh, 2000 Plate tectonics Earthquakes and volcanoes Weathering and slopes Glaciation Coasts Deserts Weather and climate Soils Biogeography Population Urbanisation Farming and food supply Rural land use Energy resources Manufacturing industries Transport and interdependence World development Living with Long Island's South Shore Larry McCormick, 1984 The south shore of Long Island one of New York's greatest recreational assets is receding at the rate of up to six feet per year In many cases efforts to halt this erosion actually have increased it Buildings once thought safely constructed back from high tidemarks today protrude far into the water Even more the number of homes and facilities built too close to the sea's edge has dramatically increased making the south shore probably less ready to withstand a major storm than at the time of the cataclysmic hurricane of 1938 Thus the question of what to do now to overcome and avoid these hazards takes on real urgency Pointing to past mistakes many Long Islanders insist that only by acting in an informed reasonable way can safe and environmentally sound development be possible for everyone **Foundations of Engineering Geology, Second Edition** A.
