Whales are the largest animals on Earth, and they are also the most migratory. Some whales travel thousands of miles each year, from the Arctic to the Antarctic and back again. This is a remarkable feat of endurance and navigation. Whales have evolved a variety of adaptations to help them survive in the open ocean, including the ability to hold their breath for long periods of time and to communicate over vast distances. Despite their size and power, whales are still threatened by human activities, such as whaling and climate change. Understanding their migration patterns is crucial for their conservation.
