National Conference on Artificial Intelligence American Association on Artificial Intel, 1984-08 **Awareness in Logic and Epistemology** Claudia Fernández-Fernández, 2021-06-19 This book creates a conceptual schema that acts as a correlation between Epistemology and Epistemic Logic It connects both fields and offers a proper theoretical foundation for the contemporary developments of Epistemic Logic regarding the dynamics of information It builds a bridge between the view of Awareness Justification Internalism and a dynamic approach to Awareness Logic The book starts with an introduction to the main topics in Epistemic Logic and Epistemology and reviews the disconnection between the two fields It analyses three core notions representing the basic structure of the conceptual schema Epistemic Awareness Knowledge and Justification Next it presents the Explicit Aware Knowledge EAK Schema using a diagram of three ellipses to illustrate the schema and a formal model based on a neighbourhood model structure that shows one concrete application of the EAK Schema into a logical structure The book ends by presenting conclusions and final remarks about the uses and applications of the EAK Schema It shows that the most important feature of the schema is that it serves both as a theoretical correlate to the dynamic extensions of Awareness Logic providing it with a philosophical background and as an abstract conceptual structure for a re interpretation of Epistemology *Integration of Constraint Programming, Artificial Intelligence, and Operations Research* Louis-Martin Rousseau, Kostas Stergiou, 2019-05-28 This book constitutes the proceedings of the 16th International Conference on Integration of Constraint Programming Artificial Intelligence and Operations Research CPAIOR 2019 held in Thessaloniki Greece in June 2019 The 34 full papers presented together with 9 short papers were carefully reviewed and selected from 94 submissions The conference brings together interested researchers from Constraint Programming CP Artificial Intelligence AI and Operations Research OR to present new techniques or applications and to provide an opportunity for researchers in one area to learn about techniques in the others A main objective of this conference series is also to give these researchers the opportunity to show how the integration of techniques from different fields can lead to interesting results on large and complex problems **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Proceedings of the the National Conference on Artificial Intelligence*, 1984 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), **Belief Functions: Theory and Applications** Sébastien Destercke, Thierry Denoeux, Fabio Cuzzolin, Arnaud Martin, 2018-09-07 This book constitutes the refereed proceedings of the 5th International Conference on Belief Functions BELIEF 2018 held in Compi gne France in September 2018 The 33 revised regular papers presented in this book were carefully selected and reviewed from 73 submissions The papers were solicited on theoretical aspects including for example statistical inference mathematical foundations continuous belief functions as well as on applications in various areas including classification statistics data fusion network analysis and intelligent vehicles *Proceedings of the National Conference on Artificial Intelligence* National

Networks Sven Grolik,2012-02-24 The use of modern planning and optimization systems for process synchronization in value networks requires the optimal information exchange between the entities involved The central focus of Sven Grolik s study is the development of efficient mechanisms for the coordination of information allocation by the example of interconnected transportation marketplaces Unlike traditional information allocation algorithms the algorithms developed in his analysis are based on update mechanisms which maintain a weak consistency of replicated information in the network Sven Grolik shows that these algorithms enable savings concerning the update costs as well as increase the performance within the network but at the same time guarantee compliance with quality of service levels concerning the currency of information The focus of this work is the development of decentralized online algorithms which make a logically distributed computation possible on the basis of local information The development of these innovative algorithms is based on approaches of multi agent system theory as well as distributed simulated annealing techniques
