Avalanches Anne Ylvisaker,2003 Describes how and why avalanches happen the damage they cause ways to avoid and survive this natural disaster and famous avalanches of the past

Landslides and Avalanches Joanna Brundle,2018-12-15 When landslides and avalanches happen they leave a trail of destruction in their paths Readers get a front row seat to these natural disasters and learn how they affect wildlife plant life and humans Essential earth science topics are made accessible through this engaging and educational look at two natural disasters that can drastically change

the way the earth looks Intense full color photographs add a thrilling element to this exploration of earth science and informative fact boxes and helpful diagrams are also included to deepen readers understanding of dangerous landslides and avalanches **Natural Disasters: Avalanches-explosions** Marlene Bradford,Robert S. Carmichael,Tracy

Irons-Georges,2001 Organized alphabetically by disaster type this natural disaster reference describes each disaster in scientific terms Special events follow in chronological order The set contains photographs a time line lists of organizations and agencies a glossary and an index Natural Disasters Marlene Bradford,Robert S. Carmichael,2001 Our world is a very

dangerous place a fact placed in historical and social context by this three volume set Each of the 23 sections covers a particular kind of disaster e g avalanches and earthquakes and includes a scientific explanation followed by descriptions of the particular events in chronological order **DK Eyewitness Books: Natural Disasters** ,2006-03-20 Spectacular

detailed full color photographs and illustrations Part of the most trusted nonfiction series among teachers librarians andparents 72 page format includes 8 bonus pages full of amazing facts about natural disasters Witness the amazing power of hurricanes tsunamis and other natural disasters with this all new addition to the Eyewitness series **Natural Disasters**

David Alexander,2018-10-24 As a well balanced and fully illustrated introductory text this book provides a comprehensive overview of the physical technological and social components of natural disaster The main disaster producing agents are reviewed systematically in terms of geophysical processes and effects monitoring mitigation and warning The relationship between disasters and society is examined with respect to a wide variety of themes including damage assessment and prevention hazard mapping emergency preparedness the provision of shelter and the nature of reconstruction Medical emergencies and the epidemiology of disasters are described and refugee management and aid to the Third World are discussed A chapter is devoted to the sociology psychology economics and history of disasters In many parts of the world the toll of death injury damage and deprivation caused by natural disasters is becoming increasingly serious Major earthquakes volcanic eruptions droughts floods and other similar catastrophes are often followed by large relief operations characterized by substantial involvement of the international community The years 1990 2000 have therefore been designated by the United Nations as the International Decade for Natural Disaster Reduction The book goes beyond mere description and elevates the field of natural catastrophes to a serious academic level The author s insights and perspectives are also informed by his practical experience of being a disaster victim and survivor and hence the unique perspective of a participant observer Only by surmounting the boundaries between disciplines can natural catastrophe be understood and mitigation efforts made effective Thus this book is perhaps the first completely interdisciplinary fully comprehensive survey of natural hazards and disasters It has a clear theoretical basis and it recognizes the importance of six fundamental approaches to the field which it blends carefully in the text in order to avoid the partiality of previous works It covers the earth and social sciences as well as engineering architecture and development studies This breadth is made possible by virtue of a strong emphasis on simple

principles of the interaction of geophysical agents with human vulnerability and response All students of environmental sciences studies and geography should find this book useful It is an introductory text which treats this dramatic subject area as something demanding serious academic treatment and not just as an assemblage of horror stories This book is intended for undergraduate students in geography and environmental studies sciences The book should also appeal to any professional or researcher concerned with man environment relations whether in social science or natural science or engineering
