The Zen of Magic Squares, Circles, and Stars Clifford A. Pickover, 2011-11-28 Humanity's love affair with mathematics and mysticism reached a critical juncture legend has it on the back of a turtle in ancient China As Clifford Pickover briefly recounts in this enthralling book the most comprehensive in decades on magic squares Emperor Yu was supposedly strolling along the Yellow River one day around 2200 B C when he spotted the creature its shell had a series of dots within squares To Yu's amazement each row of squares contained fifteen dots as did the columns and diagonals When he added any two cells opposite along a line through the center square like 2 and 8 he always arrived at 10 The turtle unwitting inspirer of the Yu square went on to a life of courtly comfort and fame Pickover explains why Chinese emperors Babylonian astrologer priests prehistoric cave people in France and ancient Mayans of the Yucatan were convinced that magic squares arrays filled with numbers or letters in certain arrangements held the secret of the universe Since the dawn of civilization he writes humans have invoked such patterns to ward off evil and bring good fortune Yet who would have guessed that in the twenty first century mathematicians would be studying magic squares so immense and in so many dimensions that the objects defy ordinary human contemplation and visualization Readers are treated to a colorful history of magic squares and similar structures their construction and classification along with a remarkable variety of newly discovered objects ranging from ornate inlaid magic cubes to hypercubes Illustrated examples occur throughout with some patterns from the author's own experiments The tesseract circles spheres and stars that he presents perfectly convey the age old devotion of the math minded to this Zenlike quest Number lovers puzzle aficionados and math enthusiasts will treasure this rich and lively encyclopedia of one of the few areas of mathematics where the contributions of even nonspecialists count **Notes on**

Magic Squares and Cubes William Symes Andrews,1917 *The Zen Of Magic Squares,Circles And Stars* M K Joseph,

Magic Squares and Cubes William Symes Andrews,2004-01-01 A magic square consists of a series of numbers so arranged in a square that the sum of each row and column and of both the corner diagonals shall be the same amount which may be termed the summation In Magic Squares and Cubes W S Andrews writes The study of magic squares probably dates back to prehistoric times Examples have been found in Chinese literature written about AD 1125 which were evidently copied from still older documents It is recorded that as early as the ninth century magic squares were used by Arabian astrologers in their calculations of horoscopes etc Hence the probable origin of the term magic which has survived to the present day Topics such as magic squares magic cubes the Franklin squares magics and Pythagorean numbers the theory of reversions magic circles spheres and stars and magic octahedroids among other things *The Zen of Magic Squares, Circles, and Stars* Clifford A. Pickover,2004-01-18 Provides a history of magic squares and similar structures describing their construction and classification along with information on newly discovered objects *Magic Squares* James Cram,1885 *Before Sudoku* Seymour S. Block,Santiago Alves Tavares,2009 Fans of sudoku may not know that the game is a recent offshoot of the venerable Magic Square which dates back more than 4 000 years to ancient China This book provides a delightful account of the mind boggling variety possible with magical squares A Practical Solution to Rubik's Magic Ashwin Belur,1986-12-01

Alan Shaxon M I M C I wish a book like this would have been available to me a long time ago Jules Lenier an excellent reference book Michael Close in Magic I can honestly say that I have never seen such a thorough treatise on magic squares anywhere Andrew Jeffrey Head of Maths St Aubyns School Rottingdean **Magic Squares and Cubes** William Symes Andrews,2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1908 edition Excerpt the result but it is not probable that he derived his square according to the scheme employed here Our 16X16 square is not exactly the same as the square of Franklin but it belongs to the same class Our method gives the key to the construction and it is understood that the system here represented will allow us to construct many more squares by simply pushing the square beyond its limits into the opposite row which by this move has to be transferred There is the same relation between Franklin s 16X16 square and our square constructed by alternation with quaternate transposition that exists between the corresponding 8X8 squares REFLECTIONS ON MAGIC SQUARES MATHEMATICS especially in the field where it touches philosophy has always been my foible and so Mr W S Andrews s article on Magic Squares tempted me to seek a graphic key to the interrelation among their figures which should reveal at a glance the mystery of their construction THE ORDER OF FIGURES In odd magic squares 3X3 5X5 7X7 etc there is no difficulty whatever as Mr Andrews s diagrams show at a glance Fig 213 The consecutive figures run up slantingly in the form of a staircase so as to let the next higher figure pass over into the next higher or lower cell of the next row and those figures that according to this method would fall outside of the square revert into it as if the magic square were for the time at the moment of crossing its boundary connected with its opposite side into the shape of a cylinder This cannot be clone at once with both its two opposite vertical and its two opposite horizontal sides but the process is easily represented in the plane by having the magic square extended on all its sides and on passing its limits **Magic Squares** Source Wikipedia,2013-09 Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online Pages 44 Chapters Ahmad al Buni Alphamagic square Antimagic square Arthur Cayley Associative magic square Bernard Frenicle de Bessy Broken diagonal Broken space diagonal Claude Gaspard Bachet de Meziriac Conway s LUX method for magic squares D R Kaprekar Diagonal magic cube Frenicle standard form Heterosquare John Horton Conway John R Hendricks Lee Sallows Lo Shu Square Luca Pacioli Magic constant Magic cube classes Magic hexagon Magic hyperbeam Magic hypercube Magic series Magic star Magic tesseract Manuel Moschopoulos Most perfect magic square Multimagic cube Multimagic square Mystic square Nasik magic hypercube Pandiagonal magic cube Pandiagonal magic square Pantriagonal magic cube Perfect magic cube Philippe de La Hire Prime reciprocal magic square Richard Schroepel Semiperfect magic cube Siamese method Simon de la Loubere Simple magic cube Simple magic square Strachey method for magic squares W W Rouse Ball Water retention on mathematical surfaces Yang Hui *An easy general Rule for filling up all Magic Squares.
