, 1990 Mineralization and Sustainable Development in the West African Craton T. Aïfa, 2021-07-22 This Special
Publication combines results obtained by interdisciplinary groups from numerous academic institutions working on
Paleoproterozoic formations to decipher the origins of the main mineralization resources in the West African Craton WAC
and their impacts on African economic development Structural geophysical sedimentological stratigraphical geochemical
petrophysical and mineralogical analyses have been used to highlight the complexities involved in mineralization
emplacement and its origin and evolution within the WAC Fourteen articles contribute to new knowledge in mineral research
They show that the geodynamic evolution of the WAC is complex from one area to another it involves subduction collision and
obduction during several deformation phases ranging from Birimian 2 3 2 0 Ga to Pan African 650 450 Ma events Various
modelling techniques when integrated help in understanding the mechanisms of mineralization emplacement some of which
are still a matter of debate The challenge for further studies is mitigation for sustainable development that can be
appropriately used to minimize such damage **Networks on Networks** Allen G. Hunt, Stefano Manzoni, 2016-01-01 Order
from chaos is simultaneously a mantra of physics and a reality in biology Physicist Norman Packard suggested that life
developed and thrives at the edge of chaos Questions remain however as to how much practical knowledge of biology can be
traced to existing physical principles and how much physics has to change in order to address the complexity of biology Phil
Anderson a physics Nobel laureate contributed to popularizing a new notion of the end of reductionism In this view it is
necessary to abandon the quest of reducing complex behavior to known physical results and to identify emergent behaviors
and principles In the present book however we have sought physical rules that can underlie the behavior of biota as well as
the geochemistry of soil development We looked for fundamental principles such as the dominance of water flow paths with
the least cumulative resistance that could maintain their relevance across a wide range of spatial and temporal scales
together with the appropriate description of solute transport associated with such flow paths Thus ultimately we address
both nutrient and water transport limitations of processes from chemical weathering to vascular plant growth The physical
principles guiding our effort are established in different but related concepts and fields of research so that in fact our book
applies reductionist techniques guided by analogy The fact that fundamental traits extend across biotic and abiotic processes
i e the same fluid flow rate is relevant to both but that distinctions in topology of the connected paths lead to dramatic
differences in growth rates helps unite the study of these nominally different disciplines of geochemistry and geobiology
within the same framework It has been our goal in writing this book to share the excitement of learning and one of the most

exciting portions to us has been the ability to bring some order to the question of the extent to which soils can facilitate plant growth and what limitations on plant sizes metabolism occurrence and correlations can be formulated thereby While we bring order to the soil constraints on growth we also generate some uncertainties in the scaling relationships of plant growth and metabolism Although we have made an first attempt to incorporate edaphic constraints into allometric scaling this is but an initial foray into the forest *Cumulated Index Medicus* ,1980
