Regions Of Recent Star Formation:

Regions of Recent Star Formation Herzberg Institute of Astrophysics, 1982-02-28 Proceedings of the Symposium on Neutral Clouds Near HII Regions Dynamics and Photochemistry held in Penticton British Columbia 24-26 June 1981

Regions of Recent Star Formation R.S. Bohn, P.E. Dewdney, 2012-12-06 The symposium on Neutral Clouds near HII Regions was prompted by an obvious need to bring together workers specifically interested in the dynamical and photochemical effects in regions showing clear evidence of on going star formation This is currently an area of considerable research activity with much new observational material over the wavelength range from X ray to radio Furthermore the field is beginning to mature No longer is molecular spectroscopy concerned only with the search for new lines and with preliminary surveys No longer are evolving HII regions modelled with the naive assumption of constant density Similarly ideas of successive star formation champagne and blister models of HII regions and refinements to abundance calculations are examples which show that theoretical initiative is keeping pace We were both surprised and gratified by the number of contributed papers and the extent to which they addressed the subject matter In the proceedings we have grouped these papers near the most appropriate of the four invited review papers The subjects of these reviews are in the general areas of Evolution of HII Regions Dynamical Interactions Chemistry in Active Regions and Infrared and Maser Sources The symposium comprised 42 orally presented papers and 23 poster papers All but two are reproduced in this volume

Scientific and Technical Aerospace Reports, 1991 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database

Star Formation, Galaxies and the Interstellar Medium Jose Franco, Federico Ferrini, G. TENORIO-TAGLE (Ed), 1993-06-10 The enormously powerful phenomena of starbursts are examined in this book These spectacular star forming events are seen on large scales in some galaxies often triggered by galactic interactions An intriguing implication of starburst research is that active galactic nuclei AGN may not be powered by accreting black holes Instead theories are presented where compact powerhouses of dust enshrouded star formation lie at the core of AGN with supernovae exploding roughly once per year within massive nuclear concentrations of gas This book collects articles from a timely international conference in Elba Italy in 1992 these comprise a thorough review of the most important developments in galactic scale star formation since the starburst revolution of the late 1980s This text will introduce graduate students to this exciting area and keep experts abreast with rapid developments in it

Regions of Recent Star Formation P. E. Dewdney, R. S. Roger, 1982 **Star Formation in Galaxies**, 1987 **Galactic and Extragalactic Radio Astronomy** E. Bouton, Gerrit L. Verschuur, Kenneth I. Kellermann, 2012-12-06 Galactic and Extragalactic Radio Astronomy is a fundamental text for graduate students and professional astronomers and covers all aspects of radio astronomy beyond the solar system Each chapter is written by a renowned expert in the field and contains a review of a particular area of radio astronomy and

presents the latest observations and interpretations as well as an extensive view of the literature as of 1988 Topics covered include galactic continuum emission HII regions the diffuse interstellar medium interstellar molecules astronomical masers neutral hydrogen the galactic center radio stars supernova remnants pulsars extragalactic hydrogen radio galaxies and quasars the microwave background and cosmological radio sources Astronomy: A Physical Perspective Marc L. Kutner, 2003-07-31 This fully revised and updated text is a comprehensive introduction to astronomical objects and phenomena By applying some basic physical principles to a variety of situations students will learn how to relate everyday physics to the astronomical world Starting with the simplest objects the text contains explanations of how and why astronomical phenomena occur and how astronomers collect and interpret information about stars galaxies and the solar system The text looks at the properties of stars star formation and evolution neutron stars and black holes the nature of galaxies and the structure of the universe It examines the past present and future states of the universe and final chapters use the concepts that have been developed to study the solar system its formation the possibility of finding other planetary systems and the search for extraterrestrial life This comprehensive text contains useful equations chapter summaries worked examples and end of chapter problem sets **The Magellanic Clouds** Raymond Haynes, Douglas Milne, 1991-02-28 Symposium 148 The Magellanic Clouds and their Dynamical Interaction with the Milky Way was the first IAU Symposium held in Australia since 1973 In all 23 countries were represented by 149 participants The Symposium was held from July 9 to 13 1990 at Womens College the University of Sydney The last symposium on the Magellanic Clouds was held in 1983 in Ttbingen Germany Since then new ground and satellite based instruments have become available A range of results from these instruments were presented at IAU Symposium 148 and are published in these proceedings IAU Symposium 148 was timed to coincide with the commissioning of the Australia Telescope and indeed a few of the first results from that instrument were presented at this Symposium Over the next decade the Australia Telescope is destined to make a major impact on Magellanic Cloud research Papers are arranged in five main sections reflecting the Symposium timetable Large Scale Structure and Kinematics Star Formation and Clustering Stellar Evolution The Interstellar Medium The LMC SMC Galaxy System These are preceeded by both the introduction to and the summary of the Symposium Questions and answers from the oral sessions are reproduced at the end of each section **From Dust To Stars** Norbert S. Schulz, 2007-03-06 Studies of stellar formation in galaxies have a profound impact on our understanding of the present and the early universe The book describes complex physical processes involved in the creation of stars and during their young lives It illustrates how these processes reveal themselves from radio wavelengths to high energy X rays and gamma rays with special reference towards high energy signatures Several sections devoted to key analysis techniques demonstrate how modern research in this field is pursued
