Regular Figures International Series Of Monographs On Pure Applied Mathematics Vol 48:

International Series of Monographs in Pure and Applied Mathematics ,1969 Regular Figures L. Fejes

Tóth,2014-07-10 Regular Figures concerns the systematology and genetics of regular figures The first part of the book deals with the classical theory of the regular figures This topic includes description of plane ornaments spherical arrangements hyperbolic tessellations polyhedral and regular polytopes The problem of geometry of the sphere and the two dimensional hyperbolic space are considered Classical theory is explained as describing all possible symmetrical groupings in different spaces of constant curvature The second part deals with the genetics of the regular figures and the inequalities found in polygons also presented as examples are the packing and covering problems of a given circle using the most or least number of discs The problem of distributing n points on the sphere for these points to be placed as far as possible from each other is also discussed The theories and problems discussed are then applied to pollen grains which are transported by animals or the wind A closer look into the exterior composition of the grain shows many characteristics of uniform distribution of orifices as well as irregular distribution A formula that calculates such packing density is then explained More advanced problems such as the genetics of the protean regular figures of higher spaces are also discussed The book is ideal for physicists
