Regulating Financial Markets George J. Benston, 1998 Financial services financial firms and financial markets are regulated to a greater extent than most other products and services In this radical book Professor George Benston provides a comprehensive critique of the justifications for financial services regulation and provides an innovative proposal for reform Executive Summary Financial services financial firms and financial markets are regulated to a greater extent than most other products and services Financial service regulation goes back centuries It provides benefits to governments for example from direct and indirect taxation of banks and to regulated financial institutions which gain where entry is restricted Consumer protection is a common reason given for financial regulation But consumers in financial markets are probably less subject to fraud misrepresentation discrimination and information asymmetry than consumers of other products Concern about negative externalities costs born by others is another argument for regulation However on

examination it is clear there are few genuine externalities. Regulations on externality grounds is justified only for financial institutions which hold government insured deposits for insurance companies which provide government mandated non contracting third party insurance for instance for cars and for companies which underwrite long term life insurance and annuities. Financial regulation incurs costs borne by consumers and taxpayers which probably exceed the benefits they receive. There are substantial unintended costs such as reduced diversification of financial institutions and the absence of less costly and more innovative products because of restrictions on entry to financial markets. An optimal regulatory system for banks would involve substantial capital requirements, periodic reporting of assets, liabilities and capital and a structured early intervention system for the authorities. For government mandated third party liability insurance, life insurance and annuities, insurance companies should be subject to capital requirements similar to those for banks. If governments wish to protect consumers of financial products the best procedure is to establish an Ombudsman to which consumers who feel they have been mistreated can go. The proposed regulatory system would be almost costless to taxpayers, the regulated companies and consumers of their products and services. Compared with existing regimes it has the great advantage of not restricting entry to financial markets nor the introduction of new products.

Reforming Britain's Economic and Financial Policy H. Treasury, 2001-12-02. In recent years the UK's macroeconomic policy framework has undergone a period of radical reform so as to deliver the economic stability necessary to achieve high levels of growth and employment. This book provides a comprehensive account of these reforms which constitute a new and innovative approach to policy making. Radical changes to the monetary policy framework, the fiscal policy framework, the regime for public spending and financial regulation are presented. Together they represent a coherent strategy to deliver economic stability and benefits to the wider economy. As well as providing an unprecedented insight into UK Government economic policy, the book takes the reader through the intellectual foundations of policy reform and the translation of these to applied policy making.

Reforming Britain's Economic and Financial Policy contains a foreword by the Chancellor Gordon Brown. *The Economics of Derivatives* T. V. Somanathan, V. Anantha Nageswaran, 2015-03-02. This book examines the beneficial and adverse effects of derivatives trading from economic theory and the recent economic history.

The Advantage of Competitive Federalism for Securities Regulation Roberta Romano, 2002. In this analysis of securities regulation the author demonstrates that the current approach toward U.S. regulation, exclusive jurisdiction of the Securities and Exchange Commission, is misguided and should be revamped by implementing a regime of competitive federalism. Under such a system, firms would select their regulator from among the states, the SEC or other nations. The author asserts that competitive federalism harnesses the high powered incentives of markets to the regulatory state to produce regulatory arrangements most compatible with investors' preferences. The author contends that the empirical evidence does not indicate that the SEC is effective in achieving its stated objectives. The commission's expansions of disclosure requirements over the years have not significantly enhanced investors' wealth. In

addition she asserts evidence from institutional equity and debt markets and cross country listing practices demonstrates that firms voluntarily disclose substantial information beyond mandatory requirements to provide the information investors demand The author concludes that under competitive federalism the aspects of the SEC's regime that are valuable to investors will be retained those that are not will be discarded and the resulting securities regime will better meet investors' needs than the present one
