## **Regulating Toxic Substances A Philosophy Of Science And The Law:**

**Regulating Toxic Substances** Carl F. Cranor, 1993-02-18 The proliferation of chemical substances in commerce poses scientific and philosophical problems The scientific challenge is to develop data methodologies and techniques for identifying and assessing toxic substances before they cause harm to human beings and the environment The philosophical problem is how much scientific information we should demand for this task consistent with other social goals we might have In this book Cranor utilizes material from ethics philosophy of law epidemiology tort law regulatory law and risk assessment to argue that the scientific evidential standards used in tort law and administrative law to control toxics ought to be evaluated with the purposes of the law in mind Demanding too much for this purpose will slow the evaluation and lead to an excess of toxic substances left unidentified and unassessed thus leaving the public at risk Demanding too little may impose other costs An appropriate balance between these social concerns must be found Justice requires we use evidentiary standards more appropriate to the legal institutions in question and resist the temptation to demand the most intensive scientific evaluation of each substance subject to legal action

*The Law of Environmental Justice* Michael Gerrard, Sheila R. Foster, 2008 Environmental justice is the concept that minority and low income individuals communities and populations should not be disproportionately exposed to environmental hazards and that they should share fully in making the decisions that affect their environment This volume examines the sources of environmental justice law and how evolving regulations and court decisions impact projects around the country

*The Ethics of Protocells* Mark Bedau, Emily C. Parke, 2009 Teams of scientists around the world are racing to create protocells microscopic self organizing entities that spontaneously assemble from simple organic and inorganic materials The creation of fully autonomous protocells a technology that can for all intents and purposes be considered literally alive is only a matter of time This book examines the

pressing social and ethical issues raised by the creation of life in the laboratory. Protocells might offer great medical and social benefits and vast new economic opportunities but they also pose potential risks and threaten cultural and moral norms against tampering with nature and playing God. The Ethics of Protocells offers a variety of perspectives on these concerns.

**Philosophy and the Precautionary Principle** Daniel Steel, 2015 This book presents and defends an interpretation of the precautionary principle from the perspective of philosophy of science. **Handbook of Risk Theory** Sabine

Roeser, 2012 Risk has become one of the main topics in fields as diverse as engineering, medicine, and economics and it is also studied by social scientists, psychologists, and legal scholars. But the topic of risk also leads to more fundamental questions such as: What is risk? What can decision theory contribute to the analysis of risk? What does the human perception of risk mean for society? How should we judge whether a risk is morally acceptable or not? Over the last couple of decades, questions like these have attracted interest from philosophers and other scholars into risk theory. This handbook provides for an overview into key topics in a major new field of research. It addresses a wide range of topics ranging from decision theory, risk perception, to ethics and social implications of risk and it also addresses specific case studies. It aims to promote communication and information among all those who are interested in theoretical issues concerning risk and uncertainty. This handbook brings together internationally leading philosophers and scholars from other disciplines who work on risk theory. The contributions are accessibly written and highly relevant to issues that are studied by risk scholars. We hope that the Handbook of Risk Theory will be a helpful starting point for all risk scholars who are interested in broadening and deepening their current perspectives. **Information Resources in Toxicology, Volume 1: Background, Resources, and Tools**

, 2020-05-16 This new fifth edition of Information Resources in Toxicology offers a consolidated entry portal for the study, research, and practice of toxicology. Both volumes represent a unique wide-ranging, curated international annotated bibliography and directory of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. The editors and authors are among the leaders of the profession, sharing their cumulative wisdom in toxicology's subdisciplines. This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools. Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1: Background, Resources, and Tools arranged in 5 parts begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations, constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2: The Global Arena offers contributed chapters focusing on the toxicology contributions of over 40 countries followed

by a glossary of toxicological terms and an appendix of popular quotations related to the field The book offered in both print and electronic formats is carefully structured indexed and cross referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed Among the many timely topics receiving increased emphasis are disaster preparedness nanotechnology omics risk assessment societal implications such as ethics and the precautionary principle climate change and children s environmental health Introductory chapters provide a backdrop to the science of toxicology its history the origin and status of toxicoinformatics and starting points for identifying resources Offers an extensive array of chapters organized by subject each highlighting resources such as journals databases organizations and review articles Includes chapters with an emphasis on format such as government reports general interest publications blogs and audiovisuals Explores recent internet trends web based databases and software tools in a section on the online environment Concludes with a miscellany of special topics such as laws and regulations chemical hazard communication resources careers and professional education K 12 resources funding poison control centers and patents Paired with Volume Two which focuses on global resources this set offers the most comprehensive compendium of print digital and organizational resources in the toxicological sciences with over 120 chapters contributions by experts and leaders in the field

*Exploring Inductive Risk* Kevin C. Elliott,Ted Richards,2017-06-01 This book brings together eleven case studies of inductive risk the chance that scientific inference is incorrect that range over a wide variety of scientific contexts and fields The chapters are designed to illustrate the pervasiveness of inductive risk assist scientists and policymakers in responding to it and productively move theoretical discussions of the topic forward

**Trade in Food** Alberto Alemanno,2007 Trade in Food surveys and explores the evolution of the European Community s regulation of food within the broader framework set out by the WTO Agreements Its main purpose is to provide readers keen to deepen their knowledge of the field with easy access to the EC and WTO food laws accompanied by a critical explanation and commentary The book is suitable for legal practitioners judges policy makers officials of international organizations as well as post graduate students of international trade law and policy international and European economic law global administrative law and risk regulation

Risk Regulation and Administrative Constitutionalism Elizabeth Fisher,2007-07-30 Over the last decade the regulatory evaluation of environmental and public health risks has been one of the most legally controversial areas of contemporary government activity Much of that debate has been understood as a conflict between those promoting scientific approaches to risk evaluation and those promoting democratic approaches This characterization of disputes has ignored the central roles of public administration and law in technological risk evaluation This is problematic because as shown in this book legal disputes over risk evaluation are disputes over administrative constitutionalism in that they are disputes over what role law should play in constituting and limiting the power of administrative risk regulators This is shown by five case studies taken from five different legal cultures an analysis of the bifurcated role of the Southwood Working Party

in the UK BSE crisis the development of doctrines in relation to judicial review of risk evaluation in the US in the 1970s the interpretation of the precautionary principle by environmental courts and generalist tribunals carrying out merits review in Australia the interpretation of the WTO Sanitary and Phytosanitary Agreement as part of the WTO dispute settlement process and the interpretation of the precautionary principle in the EU context A strong argument is thus made for re orienting the focus of scholarship in this area
