Regulation Of Aldosterone Biosynthesis:

Regulation of Aldosterone Biosynthesis Jürg Müller, 2012-12-06 Most of our knowledge of the physiological control of aldosterone secretion is based on animal experiments and clinical studies which were carried out in the 1950s and early 1960s by a large number of inspired ingenious and meticulous researchers Their work has been excellently reviewed by among others MULLER 1963 BLAIR WEST et al 1963 LARAGH and KELLY 1964 GANONG et al 1966 MULROW 1966 DAVIS 1967 and GROSS 1967 According to the majority of these investigators aldosterone secretion is primarily regulated by the renin angiotensin system with plasma sodium and potassium levels and pituitary secretion of ACTH playing important secondary roles During the last six years this hypothesis has been generally accepted and has only occasionally been challenged The following is an attempt to take from the perspective of a relatively simple in vitro model a new look at the efferent axis of the apparently very complex control system maintaining adequate aldosterone production in the mammalian organism My views are based mainly on a series of experiments which I have performed in order to study more closely the interactions of adrenocortical tissue with substances capable of directly influencing aldosterone biosynthesis

Regulation of Aldosterone Biosynthesis Jürg Müller, 2012-12-06 Sixteen years is a long time not only in human life but also in the rapid history of contemporary endocrinology Since the publication of the first edition of this monograph numerous new lines of research and discoveries have greatly contributed to our knowledge of the physiological and pathological regulation of aldosterone biosynthesis in man and animals The first reports about a sensitive radioimmunoassay for plasma aldosterone and about a preparation of dispersed zona glomerulosa cells were published in 1970 Mayes et al 1970 Haning et al 1970 These two developments alone turned out to have a tremendous impact on research in aldosterone physiology for reviews see Coghlan et al 1979b J F Tait et al 1980b In 1971 atrial natriuretic peptides somatostatin and the precursor molecule of ACTH had not yet been discovered Angiotensin antagonists and converting enzyme inhibitors were not yet available The clinical syndrome of hyporeninemic hypoaldosteronism was unknown The possible roles of prostaglandins and dopamine in the control of aldosterone production had not been considered Cyclic AMP was then the only substance with a clearly established messenger function

Pediatric Adrenal Diseases Lucia Ghizzoni, M. Cappa, G. P. Chrousos, S. Loche, M. Maghnie, 2011 Written by experts and specialized investigators this book presents a detailed overview of the recent progress in our understanding of the adrenal cortex and its pivotal roles in homeostasis Genes molecules and cell compartments directly or indirectly involved in the complex steroidogenesis pathway as well as the resulting end hormones glucocorticoids mineralocorticoids and androgens are analyzed Furthermore the defects of the genes responsible both for common and rare adrenal disorders are presented The interactions of the adrenal cortex with the adrenal medulla and their importance in the integration of adrenocortical and adrenomedullary function are discussed The complex molecular pathophysiology of congenital adrenal hyperplasia is

presented long term effects of the disorder and the still controversial antenatal therapy are examined Finally expert review chapters discuss autoimmune Addison disease and the adrenoleukodystrophy adrenomyeloneuropathy syndrome Presenting novel research findings in adrenal gland physiology and pathophysiology this book is a useful tool not only for pediatric endocrinologists but also for clinicians and researchers studying human development organogenesis mitochondrial biology nuclear receptors stress biology and pharmacology

Drugs, Enzymes and Receptors of the Renin-Angiotensin System Ahsan Husain,Robert M. Graham,2003-09-02 Since 1898 when Tigerstadt and Bergman first extracted renin from rabbit kidney the renin Enzymes and Receptors of the Renin is designed to highlight molecular and clinical approaches to understanding the renin Chapter topics have been specifically chosen to cover selected contemporary controversial and unresolved issues A novel and uni

Primary Aldosteronism Per Hellman,2014-03-28 Primary Aldosteronism PA is a disease caused by the overproduction of aldosterone hormone from the adrenal glands PA causes hypertension and the majority with this disease are undiagnosed for PA There are new insights into this matter by using biochemistry as well as advanced radiology In 2011 a breakthrough in the genetic derangements came identifying a mutated potassium channel gene KCNJ5 in about 40% of PA with adenoma Chapters in this book include a history of the disorder epidemiology genetics derangements the KCNJ5 mutations and phenotype and more

Steroid Biochemistry R. Hobkirk,2018-01-17 An attempt has been made to attract contributions which illustrate the importance of certain enzymatic processes involved in steroid biosynthesis and metabolism and in some cases leading to steroidal action in target sites Investigators actively engaged in research in such areas were invited to present their material in a manner which they considered fitting It is hoped that as a result if this the publication will possess sufficient depth to warrant approval The blend of review material and experimental data originating in the author laboratories will it is felt make for useful reading

Circulating Regulatory Factors and Neuroendocrine Function Daniela Jezová, John C. Porter, 2013-04-09 During the past several decades much research effort has gone into the elucidation of the role of neuroendocrine systems as secretory and metabolic regulators of cells of a variety of organs and structures including the testes ovaries adrenals thyroid pituitary gland and mammary glands However the role of cells comprising such organs and structures in the modulation of neuroendocrine processes has received considerably less is generally less well appreciated attention and Nonetheless it is important that we understand the actions on neuroendocrine systems of substances that reach the brain by way of the vasculature including hormones cytokines toxins amino acids drugs and similar agents In order to analyze the present state of knowledge on this topic experimental scientists and clinicians whose shared interests include actions of circulating agents on the brain met at a satellite symposium of the XXXI International Congress of Physiological Sciences This symposium entitled *Circulating Regulatory Factors and Neuroendocrine Function* was held in Smolenice Castle Czechoslovakia June 26 July 1 1989 and reviews delivered at this symposium as invited presentations are published in this volume Presentations given as free communications have been published separately and are available in *Endocrinologia Experimentalis* 24 1 273 1990
