Reinventing Darwin:

Reinventing Darwin Niles Eldredge,1995-04-17 According to the paleontologists this pattern shows that evolution is driven far more by environmental forces than by genetic competition **Reinventing Darwin** Niles Eldredge,2001-01-01 This is a first hand account of the discussions that are going on between biologists of different persuasions On the one side are the Ultra Darwinists mainly theoretical geneticists whose ranks include Richard Dawkins John Maynard Smith and George C Williams They emphasize the supremacy of the gene and of natural selection The other side is a more diverse group the self styled Naturalists who focus on whole creatures rather than genes and who think in terms of complex interacting ecological processes here we find Stephen Jay Gould and Niles Eldredge *Reinventing Darwin* Niles Eldredge,1995 This is a first hand account of the discussions going on between biologists of different persuasions On the one hand are the ultradarwinians who emphasize the supremacy of the gene and natural selection and on the other the naturalists who focus on whole creatures rather than on genes *Gaither's Dictionary of Scientific Quotations* Carl C. Gaither,Alma E. Cavazos-Gaither,2012-01-04 This unprecedented collection of 27 000 quotations is the most comprehensive and carefully researched of its kind covering all fields of science and mathematics With this vast compendium you can readily conceptualize and embrace the written images of scientists laymen politicians novelists playwrights and poets about humankind s scientific achievements Approximately 9000 high quality entries have been added to this new edition to provide a rich selection of quotations for the student the educator and the scientist who would like to introduce a presentation with a relevant quotation that provides perspective and historical background on his subject Gaither s Dictionary of Scientific Quotations Second Edition provides the finest reference source of science quotations for all audiences The new edition adds greater depth to the number of quotations in the various thematic arrangements and also provides new thematic categories

The Evolutionists Richard Morris,2002-05 Introduced in 1859 Charles Darwin s theory of evolution generated hot debate and controversy Today nearly all reputable scientists agree evolution did happen and natural selection was its main driving force Yet a century and a half after Darwin the theory of evolution is still being fought over with a ferocity that has rarely been equaled in the annals of science What are scientists arguing about And why are their exchanges sometimes so bitter In The Evolutionists Richard Morris vividly portrays the controversies that rage today in the field of evolutionary biology With a clear and unbiased eye he explores the fundamental questions about the evolutionary process that have provoked such vehement disagreement among some of the world s most prominent scientists including Stephen Jay Gould fellow paleontologist Niles Eldredge geneticist John Maynard Smith and zoologist Richard Dawkins A vibrant account of contemporary evolutionary biology The Evolutionists is a fascinating look at how controversy and debate shape the scientific process The Morals of Life Davide Tarizzo,2024-08-06 A theory of biopolitical power that updates Foucault illustrating the moral implications of modern evolutionary theory In our day the individual has become a life the singular of the plural

noun population From this new understanding of what it means to be human comes a new form of biopolitical power with a new set of moral rules In The Morals of Life moral philosopher Davide Tarizzo presents a theoretical framework for understanding this transformation of the old fashioned government of living beings as Michel Foucault characterized biopolitics into a new government of modular living beings as well as a template for making sense of biopolitical power that operates on the scale of populations rather than individuals Tarizzo traces population thinking the notion of modular optimization and other conceptual keystones of the current biopolitical regime an ethopolitical regime in the author s terms to their origins in twentieth century biological thought more precisely and critically evolutionary theory Neo Darwinism Tarizzo argues should be seen not only as a scientific paradigm but also as a philosophy per se because it is evolutionary theory that today provides an answer to the old philosophical question What is man This new kind of philosophy his book suggests largely determines the way in which people look at themselves and society Not only does it contribute to designing new technologies of power but it also fosters subjection to the new ethopolitical regime *Retrieving Darwin's Revolutionary Idea* Samuel Grove,2021-07-12 Darwin s discovery of evolution is as celebrated as Galileo s laws of motion or Newton s discovery of gravity But this was only half the story Not content to prove that evolution had happened Darwin sought to convey its full humbling implications Thus he formulated the theory of natural selection Contrary to popular belief this theory ran exactly counter to scientific reason and was consequently rejected by the scientific community of the time This wasn t the only reason Darwin s critics recoiled His theory robbed the ruling orders of any easy recourse to consolatory tales of nature s harmony and design The fate of his ideas for the time being at least would be left to the heretics he inspired in other domains Darwin s radical thought anticipated Nietzsche s Godless philosophy Marx s class based economics and Freud s psychological theories of the unconscious It would take a further 80 years for Darwinism to become accepted as mainstream science but it came at the expense of its counter scientific core For the remainder of the twentieth century a popularized Darwinism would become the touchstone for backlash movements in philosophy economics and psychology disciplines he once so radicalized This is the story of how the most revolutionary idea of the nineteenth century became the most reactionary idea of the twentieth **Evolution's Purpose** Steve McIntosh,2012-10 Presents the author s view of the scientific story of our evolutionary origins to show how evolution s progressive generation of emergent value reveals a larger purpose within the process He demonstrates how this purpose can be felt within each of us as the evolutionary impulse to make things better to grow toward ever widening realizations of beauty truth and goodness Provided by publisher

Species of Origins Karl Giberson,Donald A. Yerxa,2002 In Species of Origins Karl W Giberson and Donald A Yerxa examine America s controversial conversation about creation and evolution While noting that part of the discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic

science and traditional Judeo Christian religions Visit our website for sample chapters **Charles Darwin and the Theory of Evolution by Natural Selection** Fred Bortz,2013-12-15 This book explains Charles Darwin s theory of evolution through natural selection while telling how a hypothesis became not merely a theory but the foundation of an entire science
