Relations In Knowledge Representation:

Knowledge Representation and Relation Nets Aletta E. Geldenhuys, Hendrik O. van Rooyen, Franz Stetter, 2012-12-06 Knowledge Representation and Relation Nets introduces a fresh approach to knowledge representation that can be used to organize study material in a convenient teachable and learnable form The method extends and formalizes concept mapping by developing knowledge representation as a structure of concepts and the relationships among them Such a formal description of analogy results in a controlled method of modeling new knowledge in terms of existing knowledge in teaching and learning situations and its applications result in a consistent and well organized approach to problem solving Additionally strategies for the presentation of study material to learners arise naturally in this representation While the theory of relation nets is dealt with in detail in part of this book the reader need not master the formal mathematics in order to apply the theory to this method of knowledge representation To assist the reader each chapter starts with a brief summary and the main ideas are illustrated by examples The reader is also given an intuitive view of the formal notions used in the applications by means of diagrams informal descriptions and simple sets of construction rules Knowledge Representation and Relation Nets is an excellent source for teachers courseware designers and researchers in knowledge representation cognitive science theories of learning the psychology of education and structural modeling *Knowledge Representation* Arthur B. Markman, 2013-06-17 Knowledge representation is fundamental to the study of mind All theories of psychological processing are rooted in assumptions about how information is stored These assumptions in turn influence the explanatory power of theories This book fills a gap in the existing literature by providing an overview of types of knowledge representation techniques and their use in cognitive models Organized around types of representations this book begins with a discussion of the foundations of knowledge representation then presents discussions of different ways that knowledge representation has been used Both symbolic and connectionist approaches to representation are discussed and a set of recommendations about the way representations should be used is presented This work can be used as the basis for a course on knowledge representation or can be read independently It will be useful to students of psychology as well as people in related disciplines computer science philosophy anthropology and linguistics who want an introduction to techniques for knowledge representation *Principles of Knowledge Representation and Reasoning* Jon Doyle, Erik Sandewall, Pietro Torasso, 1994 The proceedings of KR 94 comprise 55 papers on topics including deduction an search description logics theories of knowledge and belief nonmonotonic reasoning and belief revision action and time planning and decision making and reasoning about the physical world and the relations between KR **Relations in Knowledge Representation** Keşavacandra Dāśa, 1991 *Principles of Knowledge Representation and Reasoning* A. G. Cohn, Fausto Giunchiglia, Bart Selman, 2000 **Knowledge Representation and Metaphor** E. Cornell Way, 2013-03-14 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data

processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time The problems posed by metaphor and analogy are among the most challenging that confront the field of knowledge representation In this study Eileen Way has drawn upon the combined resources of philosophy psychology and computer science in developing a systematic and illuminating theoretical framework for understanding metaphors and analogies While her work provides solutions to difficult problems of knowledge representation it goes much further by investigating some of the most important philosophical assumptions that prevail within artificial intelligence today By exposing the limitations inherent in the assumption that languages are both literal and truth functional she has advanced our grasp of the nature of language itself J R F *Readings in Knowledge Representation* Ronald J. Brachman, Hector J. Levesque, 1985 In Artificial Intelligence it is often said that the representation of knowledge is the key to the design of robust intelligent systems In one form or another the principles of Knowledge Representation are fundamental to work in natural language processing computer vision knowledge based expert systems and other areas The papers reprinted in this volume have been collected to allow the reader with a general technical background in AI to explore the subtleties of this key subarea These seminal articles spanning a quarter century of research cover the most important ideas and developments in the representation field The editors introduce each paper discuss its relevance and context and provide an extensive bibliography of other work *Readings in Knowledge Representation* is intended to serve as a complete sourcebook for the study of this crucial subject

Knowledge Representation Techniques Patrick Doherty, Witold Lukaszewicz, Andrzej Szalas, 2007-05-31 1 1 Background The basis for the material in this book centers around research done in an ongoing long term project which focuses on the development of highly autonomous unmanned aerial vehicle systems The actual platform which serves as a case study for the research in this book will be described in detail later in this chapter Before doing that a brief background of the motivations behind this research will be provided One of the main research topics in the project is knowledge representation and reasoning and its use in UAV forms A very strong constraint has been placed on the nature of research done in the project where theoretical results to the greatest extent possible should serve as a basis for tractable reasoning mechanisms for use in a fully deployed autonomous UAV operating under soft real time constraints associated with the types of mission scenarios envisioned Considering that much of the work with knowledge representation in this context focuses on application domains where one can only hope for an incomplete characterization of such domains this methodological constraint has proven to be quite challenging since in essence the focus is on tractable approximate and nonmonotonic reasoning systems As is well

known until recently nonmonotonic formalisms have had a notorious reputation for lack of tractable and scalable reasoning systems *Conceptual Graphs for Knowledge Representation* Guy W. Mineau, Bernard Moulin, 1993-07-14 Artificial Intelligence and cognitive science are the two fields devoted to the study and development of knowledge based systems KBS Over the past 25 years researchers have proposed several approaches for modeling knowledge in KBS including several kinds of formalism such as semantic networks frames and logics In the early 1980s J F Sowa introduced the conceptual graph CG theory which provides a knowledge representation framework consisting of a form of logic with a graph notation and integrating several features from semantic net and frame representations Since that time several research teams over the world have been working on the application and extension of CG theory in various domains ranging from natural language processing to database modeling and machine learning This volume contains selected papers from the international conference on Conceptual Structures held in the city of Quebec Canada August 4 7 1993 The volume opens with invited papers by J F Sowa B R Gaines and J Barwise **Knowledge Representation in the Social Semantic Web** Katrin Weller, 2010-10-29 The main purpose of this book is to sum up the vital and highly topical research issue of knowledge representation on the Web and to discuss novel solutions by combining benefits of folksonomies and Web 2.0 approaches with ontologies and semantic technologies The book contains an overview of knowledge representation approaches in past present and future introduction to ontologies Web indexing and in first case the novel approaches of developing ontologies
