Relativistic Flows in Astrophysics A. W. Guthmann, M. Georganopoulos, A. Marcowith, 2014-10-01 **Black Hole Astrophysics 2002** Hyun Kyu Lee, Myeong-Gu Park, 2002 This book consists of about 20 lectures on theoretical and observational aspects of astrophysical black holes by experts in the field The basic principles and astrophysical applications of the black hole magnetosphere and the Blandford Znajek process are reviewed in detail as well as accretion by black holes black hole X Ray binaries black holes with cosmic strings and so on Recent advances in X Ray observations of galactic black holes and new understanding of supermassive black holes in AGNs and normal galaxies are also discussed **Compact Objects in Astrophysics** Max Camenzind, 2007-02-24 Modern comprehensive introduction and overview of the physics of White Dwarfs Neutron Stars and Black Holes including all relevant observations Contains a basic introduction to General Relativity including the modern 3+1 split of spacetime and of Einstein's equations The split is used for the first time to derive the structure equations for rapidly rotating neutron stars and Black Holes Detailed discussions and derivations of current theoretical results In particular also the most recent equations of state for neutron star matter are explained Topics such as colour superconductivity are discussed and used for modelling A book for graduate students and researchers Contains exercises and some solutions *Very High Energy Cosmic Gamma Radiation* Felix A. Aharonian, 2004 Gamma ray astronomy the branch of high energy astrophysics that studies the sky in energetic gamma ray photons is destined to play a crucial role in the exploration of nonthermal phenomena in the Universe in their most extreme and violent forms This book presents the motivations and highlights the principal objectives of the field as well as demonstrates its intrinsic links to other branches of high energy astrophysics Preference is given to three topical areas i origin of cosmic rays ii physics and astrophysics of relativistic jets iii observational gamma ray cosmology Also a significant part of the book is devoted to the discussion of the principal mechanisms of production and absorption of energetic gamma rays in different astrophysical environments as well as to the description of the detection methods of high energy cosmic gamma radiation **Interfacial Fluid Dynamics and Transport Processes** Ranga Narayanan, Dietrich Schwabe, 2003-11-14 The present set of lectures and tutorial reviews deals with various topical aspects related to instabilities of interfacial processes and driven flows from both the theoretical and experimental point of views New research has been spurred by demands for many applications in material sciences melting solidification electro deposition biomedical engineering and processing in microgravity environments This book is intended as both a modern source of reference for researchers in the field as well as an introduction to postgraduate students and non specialists from related areas **The Tenth Marcel Grossmann Meeting** M. Novello, Santiago E. Perez Bergliaffa, Remo Ruffini, 2005 The Marcel Grossmann meetings were conceived to promote theoretical understanding in the fields of physics mathematics astronomy and astrophysics and to direct future technological observational and experimental efforts They review recent developments in gravitation and general relativity with major emphasis on mathematical foundations and

physical predictions Their main objective is to bring together scientists from diverse backgrounds and their range of topics is broad from more abstract classical theory and quantum gravity and strings to more concrete relativistic astrophysics observations and modeling This Tenth Marcel Grossmann Meeting was organized by an international committee composed of D Blair Y Choquet Bruhat D Christodoulou T Damour J Ehlers F Everitt Fang Li Zhi S Hawking Y Ne eman R Ruffini chair H Sato R Sunyaev and S Weinberg and backed by an international coordinating committee of about 135 members from scientific institutions representing 54 countries The scientific program included 29 morning plenary talks during 6 days and 57 parallel sessions over five afternoons during which roughly 500 papers were presented These three volumes of the proceedings of MG10 give a broad view of all aspects of gravitation from mathematical issues to recent observations and experiments

Astrophysical Aspects Of The Most Energetic Cosmic Rays - Proceedings Of The Icr International Symposium M Nagano, F Takahara, 1991-07-23 The proceedings present new results obtained from recent observations by the Haverah Park Yakutsk Fly s Eye and Akeno groups on the shape of the energy spectrum the arrival direction point source and the nature of the most energetic cosmic rays They also contain an in depth discussion of the present status of observations on discrete sources at TeV and PeV energies A detailed discussion of the physics problems related to the origin acceleration mechanism and propagation of the most energetic cosmic rays in the

galactic and extragalactic space is given in relation to observable features

Radio Galaxies at TeV Energies Dorit Glawion, 2020-05-13 It is common believe that the centers of all galaxies exhibit supermassive black holes with masses ranging from millions up to billions of the mass of our Sun By accreting surrounding matter the luminosity of these galactic nuclei can outshine the emission of their host galaxies If this is the case they are called active galactic nuclei Some of these objects eject powerful outflows composed of plasma called jets These jets can produce non thermal radiation which observable across the entire electromagnetic spectrum from radio up to the gamma ray frequencies At highest frequencies TeV range most of the detected active galaxies have jets directed along or close to the line of sight However also galaxies with larger angles to the line of sight showing fascinating features were discovered in seeming contradiction to traditional models for these so called radio galaxies Thus the latter are of particular importance for understanding active galactic nuclei in general This Special Issue contains reviews and research articles about the current knowledge of radio galaxies at TeV energies including observational results and theoretical models It is intended to guide the interested reader deeper into this fascinating discipline of modern day astronomy

Cosmic Ray Interactions, Propagation, and Acceleration in Space Plasmas Lev Dorman, 2006-09-02 Chapter 1 briefly describes the main properties of space plasmas and primary CR Chapter 2 considers the problem of CR propagation in space plasmas described by the kinetic equation and different types of diffusion approximations Chapter 3 is devoted to CR non linear effects in space plasmas caused by CR pressure and CR kinetic stream instabilities with the generation of Alfvén turbulence In Chapter 4 different processes of CR acceleration in space plasmas are considered The book ends with a list providing more than 1 300 full references a discussion on future developments and unsolved problems as well as Object and Author indexes
