Relaxation Oscillations In Mathematical Models Of Ecology:

Relaxation Oscillations in Mathematical Models of Ecology A. I. Kolesov, I. S. Serafimovich Kolesov, 1995 This book presents for the first time a systematic exposition of techniques for constructing relaxation oscillations and methods for investigating stability properties of certain classes of systems with delay The authors bring out some of the distinctive features that have no analogues in relaxation systems of ordinary differential equations The exposition provides analysis of significant examples from biophysics mathematical ecology and quantum physics that elucidate important patterns Many unsolved problems are posed The book would appeal to researchers and specialists interested in the theory and applications of relaxation oscillations

Relaxation Oscillations in Mathematical Models of Ecology A. Yu Kolesov, Yu. S. Kolesov, 1995 Multiple Time Scale Dynamics Christian Kuehn, 2015-02-25 This book provides an introduction to dynamical systems with multiple time scales The approach it takes is to provide an overview of key areas particularly topics that are less available in the introductory form The broad range of topics included makes it accessible for students and researchers new to the field to gain a quick and thorough overview The first of its kind this book merges a wide variety of different mathematical techniques into a more unified framework The book is highly illustrated with many examples and exercises and an extensive bibliography The target audience of this book are senior undergraduates graduate students as well as researchers interested in using the multiple time scale dynamics theory in nonlinear science either from a theoretical or a mathematical modeling perspective

Asymptotic Representation of Relaxation Oscillations in Lasers Elena V. Grigorieva, Sergey A. Kaschenko, 2016-11-09 In this book we analyze relaxation oscillations in models of lasers with nonlinear elements controlling light dynamics The models are based on rate equations taking into account periodic modulation of parameters optoelectronic delayed feedback mutual coupling between lasers intermodal interaction and other factors With the aim to study relaxation oscillations we present the special asymptotic method of integration for ordinary differential equations and differential difference equations As a result they are reduced to discrete maps Analyzing the maps we describe analytically such nonlinear phenomena in lasers as multistability of large amplitude relaxation cycles bifurcations of cycles controlled switching of regimes phase synchronization in an ensemble of coupled systems and others The book can be fruitful for students and technicians in nonlinear laser dynamics and in differential equations

Some Questions in the Theory of Oscillations and the Theory of Optimal Control R. V. Gamkrelidze, 1993 This book contains two fundamental papers The first is in essence a short monograph devoted to the theory of periodic motions in singularly perturbed systems The second deals with structural properties of the solutions of a system having infinitely many switchings on a finite time interval to Hamiltonian systems with discontinuous right hand side *Asymptotic Methods for Relaxation Oscillations and Applications* Johan Grasman, 2012-12-06 In various fields of science notably in physics and biology one is confronted with periodic phenomena having a remarkable temporal structure it is as if certain systems are periodically reset in an initial state A paper

of Van der Pol in the Philosophical Magazine of 1926 started up the investigation of this highly nonlinear type of oscillation for which Van der Pol coined the name relaxation oscillation The study of relaxation oscillations requires a mathematical analysis which differs strongly from the well known theory of almost linear oscillations In this monograph the method of matched asymptotic expansions is employed to approximate the periodic orbit of a relaxation oscillator As an introduction in chapter 2 the asymptotic analysis of Van der Pol s equation is carried out in all detail The problem exhibits all features characteristic for a relaxation oscillation From this case study one may learn how to handle other or more generally formulated relaxation oscillations In the survey special attention is given to biological and chemical relaxation oscillators In chapter 2 a general definition of a relaxation oscillation is formulated
