Connecticut. Supreme Court,1899 *Agrochemicals in Soil and Environment* M. Naeem,Juan Francisco Jimenez

Bremont,Abid Ali Ansari,Sarvajeet Singh Gill,2022-06-28 This volume *Agrochemicals in Soil and Environment* Impacts and Remediation is a comprehensive collection of important literature on agrochemical contamination The main focus of this book is to point out undesirable changes in biological physical and chemical characteristics of agricultural soils and its impacts on global agricultural crop productivity Soil is one of the important resources of basic needs for our sustenance but due to various anthropogenic activities like urbanization and industrialization the soil is losing its basic quality characteristics Soil microorganisms water holding capacity minerals salts and nutrients are under the direct threat due to agrochemicals therefore agricultural sector is facing a serious challenge Lack of proper knowledge and luxurious applications of agrochemicals resulting into degradation and deterioration of soil quality loss of soil and crop productivity and threatening the food security Therefore it is imperative to develop indices indicators and soil parameters for the monitoring and impact assessment of agricultural contaminants Further biotic and abiotic stresses and their tolerance mechanisms in plants in relation to the soil contaminants such as toxic pollutants heavy metals inorganic and organic matters variety of pesticides insecticides herbicides agricultural runoffs and solid wastes and chemical fertilizers are also highlighted in this volume This book also discusses causes of reduced agriculture productivity and suggests sustainable measures such as plant based technologies bioremediation and nanotechnology that can be used to overcome the crop losses The book is interest to research students teachers agricultural scientists agronomists environmentalists as well as policy makers

Soil-Subsurface Change Bruno Yaron,Ishai Dror,Brian Berkowitz,2012-02-18 This book combines soil science earth science and environmental geochemistry providing comprehensive background information for specialists interested in chemical induced changes in the soil subsurface system Readers are introduced to the chemistry of contaminants that often disturb the natural soil subsurface equilibrium as a result of human activity While the soil subsurface system has in many cases been affected by human impact the effects of chemical contaminants on the actual matrix and properties have been largely neglected The major focus of the book is on changes to the soil subsurface matrix and properties caused by chemical

pollution By integrating results available in the literature we observe that chemical pollutants may lead to the irreversible formation of a new soil subsurface regime characterized by a matrix and properties different than those of the natural regime In contrast to the geological time scales dictating natural changes to the matrix and properties of the soil subsurface system the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale The numerous examples presented in the book confirm that chemical contamination should be considered as an additional factor in the formation of a contemporary soil subsurface regime that is different than that of the pristine system
