Relevant Logics And Their Rivals 2 Western Philosophy Series 2:

Meaning and Proscription in Formal Logic Thomas Macaulay Ferguson, 2017-12-22 This book aids in the rehabilitation of the wrongfully deprecated work of William Parry and is the only full length investigation into Parry type propositional logics. A central tenet of the monograph is that the sheer diversity of the contexts in which the mereological analogy emerges its effervescence with respect to fields ranging from metaphysics to computer programming provides compelling evidence that the study of logics of analytic implication can be instrumental in identifying connections between topics that would otherwise remain hidden. More concretely the book identifies and discusses a host of cases in which analytic implication can play an important role in revealing distinct problems to be facets of a larger cross disciplinary problem. It introduces an element of constancy and cohesion that has previously been absent in a regrettably fractured field shoring up those who are sympathetic to the worth of mereological analogy. Moreover it generates new interest in the field by illustrating a wide range of interesting features present in such logics and highlighting these features to appeal to researchers in many fields.

Routley-Meyer Ternary Relational Semantics for Intuitionistic-type Negations Gemma Robles, José M. Méndez, 2018-01-02. Routley Meyer Ternary Relational Semantics for Intuitionistic type Negations examines how to introduce intuitionistic type negations into RM semantics. RM semantics is highly malleable and capable of modeling families of logics which are very different from each other. This semantics was introduced in the early 1970s and was devised for interpreting relevance logics. In RM semantics negation is interpreted by means of the Routley operator which has been almost exclusively used for modeling De Morgan negations. This book provides research on particular features of intuitionistic type of negations in RM semantics while also defining the basic systems and many of their extensions by using models with or without a set of designated points. Provides a clear development of the fundamentals of RM semantics in a new application. Covers the most general research on ternary relational semantics. Includes scrutiny of constructive negation from the ternary relational perspective.

New Directions in Relevant Logic Igor Sedlár, Shawn Standefer, Andrew Tedder, 2025-01-30. This book brings together contemporary work on relevant logics to showcase the recent progress of the field and set the stage for future research. The papers in the volume contribute to the formal and philosophical development of the field. They include contributions from different traditions and approaches ranging from philosophical discussions of the foundations of relevant and related kinds of non classical logic to mathematical work concerning open technical problems in the field. This is the first edited collection on the topic in many years and it includes contributions from established figures as well as younger generations of researchers. Relevant logics have recently seen a resurgence of interest and this volume will be an important resource for logicians working on substructural and relevant logics for years to come.
