Practical Graph Analytics with Apache Giraph Roman Shaposhnik, Claudio Martella, Dionysios Logothetis, 2015-11-19 Practical Graph Analytics with Apache Giraph helps you build data mining and machine learning applications using the Apache Foundation's Giraph framework for graph processing This is the same framework as used by Facebook Google and other social media analytics operations to derive business value from vast amounts of interconnected data points Graphs arise in a wealth of data scenarios and describe the connections that are naturally formed in both digital and real worlds Examples of such connections abound in online social networks such as Facebook and Twitter among users who rate movies from services like Netflix and Amazon Prime and are useful even in the context of biological networks for scientific research Whether in the context of business or science viewing data as connected adds value by increasing the amount of information available to be drawn from that data and put to use in generating new revenue or scientific opportunities Apache Giraph offers a simple yet flexible programming model targeted to graph algorithms and designed to scale easily to accommodate massive amounts of data Originally developed at Yahoo Giraph is now a top top level project at the Apache Foundation and it enlists contributors from companies such as Facebook LinkedIn and Twitter Practical Graph Analytics with Apache Giraph brings the power of Apache Giraph to you showing how to harness the power of graph processing for your own data by building sophisticated graph analytics applications using the very same framework that is relied upon by some of the largest players in the industry today

Developing .NET Enterprise Applications John Kanalakakis, 2008-01-01 APPLICATION DEVELOPMENT IS USUALLY faced with several critical factors time to market ever increasing quality and cost of development Time to market is critical in that any project that an individual or company may have in mind is probably already in the works elsewhere When that is the case everything comes down to being the first to deliver even if it falls short A Gartner Research study showed that competing products offering similar features will take the most market share if released sooner The study further added that the product released first even with fewer features typically builds market share faster The lesson of that study is that it is important to release a 1.0 version of a new product concept as quickly as possible and then follow up with feature add-ons over time Product consistency and quality are also critical to the success of products making their debut Applications with modules that look differently can undermine the application user's confidence in the product The lower their confidence in the application the less they use the product and come to depend upon it The same can be said at the

code level The more modules that are implemented consistently the easier different developers can step in to investigate and resolve problems Cost of development is often measured by productivity or how much code is created to accomplish specific application tasks
