Brock, 2012-12-06 This volume contains papers presented at the Fifth International Symposium on Intracranial Pressure held on May 30 June 3 1982 in Tokyo Japan The Symposium has continued to grow since it began in 1972 and this year it was comprised 121 oral and 46 poster presentations This considerable number was chosen from the more than 216 abstracts that were received which made the selection process very difficult We would like to thank the Program Committee for their efforts One hundred and fifty one of the manuscripts are printed here The classic papers short communications and the presentations for the poster sessions here appear together under their appropriate topic heading There were eleven sessions which spanned the most basic scientific descriptions of ICP dynamics to the most recent clinical advances and debate Also included are the seven special seminars given by the invited speakers These special seminars were an innovation at this symposium as a means of reviewing the major aspects and history and of projecting the future directions of this expanding field The organizers wish to thank the Advisory Committee for their guidance and focus and to express their appreciation to everyone who contributed to the success of this meeting to the Chairmen and Co chairmen to all of the members and participants and not least of all to our executive staff who worked behind the scenes We also wish to acknowledge our gratitude to Springer Verlag for their technical aid and for their prompt publication of this volume *Practical Handbook of Neurosurgery* Marc Sindou, 2009-11-06 *Practical Handbook of Neurosurgery* invites readers to take part in a journey through the vast field of

neurosurgery in the company of internationally renowned experts At a time when the discipline is experiencing a detrimental tendency to segment into various subfields and scatter in the process it can be worthwhile to collect a number of practical lessons gleaned from experienced and leading neurosurgeons The book also aims to present numerous important figures in the neurosurgical community with a brief overview of the vitae and main contributions for each We must confess that we were sad that some of the most active members were unable to participate likely due to time constraints We are however fortunate that the majority were able to take part As such though not exhaustive the book does represent an anthology of contemporary neurosurgeons From the preface At the very beginning of the project our intention was to make a poetbook But month after month it became obvious that the work would be much more expansive ultimately we produced three volumes Nevertheless we hope that all the three volumes together will remain easily accessible and a daily companion The pocket has to be more like a travel bag We would like to thank all of the contributors they have sacrificed their valuable time to deliver sound and critical views and above all useful guidelines

Mechanisms of Cerebral Hypoxia and Stroke G. Somjen, 2013-03-13 The articles and short communications in this volume are based on papers presented to the Symposium on Cerebral Hypoxia and Stroke held in Budapest in August of 1987 Besides participants at the meeting three scientists who were invited but could not attend have also contributed chapters to this volume A synopsis of the general discussion at the conference and a review chapter conclude this volume To the readers of this book it will not be news that stroke is a worldwide problem Efforts to cope with this often devastating condition are worldwide also as attested by the international membership of the conference It has been said of oxygen deficiency that it not only stops the machine it also wrecks the machinery The paramount question in stroke research is this why can't the brain be restarted after a hypoxic episode in much the same manner as a motor car can when its gas tank is refilled after it stalled because it ran out of fuel Participants at the Symposium had been requested in advance of the meeting to especially consider a series of specific questions in relation to this general problem Among these specific questions were the mechanism of synaptic blockade in hypoxic brain tissue the transition from reversible to irreversible arrest of function the nature of postischemic delayed cell death the possible basic differences in the consequences of hypoxia and ischemia and actual and potential approaches to the prevention and treatment of cell damage in hypoxia and stroke
