Algae Based Polymers, Blends, and Composites Khalid Mahmood Zia, Mohammad Zuber, Muhammad Ali, 2017-06-19 Algae Based Polymers Blends and Composites Chemistry Biotechnology and Material Sciences offers considerable detail on the origin of algae extraction of useful metabolites and major compounds from algal bio mass and the production and future prospects of sustainable polymers derived from algae blends of algae and algae based composites Characterization methods and processing techniques for algae based polymers and composites are discussed in detail enabling researchers to apply the latest techniques to their own work The conversion of bio mass into high value chemicals energy and materials has ample financial

and ecological importance particularly in the era of declining petroleum reserves and global warming Algae are an important source of biomass since they flourish rapidly and can be cultivated almost everywhere At present the majority of naturally produced algal biomass is an unused resource and normally is left to decompose Similarly the use of this enormous underexploited biomass is mainly limited to food consumption and as bio fertilizer However there is an opportunity here for materials scientists to explore its potential as a feedstock for the production of sustainable materials Provides detailed information on the extraction of useful compounds from algal biomass Highlights the development of a range of polymers blends and composites Includes coverage of characterization and processing techniques enabling research scientists and engineers to apply the information to their own research and development Discusses potential applications and future prospects of algae based biopolymers giving the latest insight into the future of these sustainable materials *Current Catalog*, 1988 First multi year cumulation covers six years 1965 70 Foye's Principles of Medicinal Chemistry Thomas L.
