Neural Information Processing Nikil R. Pal, Nikola Kasabov, Rajani K. Mudi, Srimanta Pal, Swapan K. Parui, 2004-10-29 It is our great pleasure to welcome you to the 11th International Conference on Neural Information Processing ICONIP 2004 to be held in Calcutta ICONIP 2004 is organized jointly by the Indian Statistical Institute ISI and Jadavpur University JU We are confident that ICONIP 2004 like the previous conferences in this series will provide a forum for fruitful interaction and the exchange of ideas between the participants coming from all parts of the globe ICONIP 2004 covers all major facets of computational intelligence but of course with a primary emphasis on neural networks We are sure that this meeting will be enjoyable academically and otherwise We are thankful to the track chairs and the reviewers for extending their support in various forms to make a sound technical program Except for a few cases where we could get only two review reports each submitted paper was reviewed by at least three referees and in some cases the revised versions were again checked by the referees

We had 470 submissions and it was not an easy task for us to select papers for a four day conference. Because of the limited duration of the conference based on the review reports we selected only about 40% of the contributed papers. Consequently it is possible that some good papers are left out. We again express our sincere thanks to all referees for accomplishing a great job. In addition to 186 contributed papers the proceedings includes two plenary presentations, four invited talks and 18 papers in four special sessions. The proceedings is organized into 26 coherent topical groups. [Subject Guide to Books in Print](#)

Experience Carlo Zuccarini, 2019-03-30 There has been a long standing and mutually informing association between psychoanalysis literature and the arts Surprisingly given the oral aural basis of the talking cure music has largely been overlooked by psychoanalysis Notably neuroscientific research investigating music reception and production has been steadily increasing in range and scope over the years However in order to avoid confounding factors empirical studies have focused primarily on non vocal music Remarkably operatic vocal music has not featured prominently in either field Yet the multi dimensional multi layered nature of opera which fuses together a number of different arts would appear to provide fertile soil for both disciplines This book aims to fill that gap providing a stepping stone for further research It leverages the individual strengths of psychoanalysis and neuroscience both separately and jointly as the inter discipline of neuropsychanalysis By combining various theories of mind with knowledge about music processing in the brain this book comprehensively examines the operatic reception experience providing an account in subjective as well as objective terms It explores the bittersweet enjoyment of operatic vocal music which can literally move an operaphile to tears The explanation for this may be found in a number of subjective dynamics that are unique to the reception of opera rather than in any distinct objective neural processes which are common to the reception of all music These subjective dynamics which are recruited during neural processing are triggered by the equally unique features of the operatic voice in combination with a number of auxiliary elements that are specific to opera This book will be of interest to academics in a broad range of science and arts disciplines related to music perception and performance such as music psychology and operatic performance It may also appeal to passionate operaphiles who wish to understand what drives their addiction
