Physics and Engineering of Medical Imaging R. Guzzardi, 2012-12-06 The NATO Advanced Study Institute ASI on Physics and Engineering of Medical Imaging has addressed a subject which in the wide area of biomedical technology is one of those which are showing greater impact in the practice of medicine for the ability to picture both Anatomy and Physiology The information and accuracy obtained by whatever imaging methodology is a complex result of a multidisciplinary effort of several sciences such as Physics Engineering Electronics Chemistry Medicine etc Development has occurred through work performed in different environments such as basic and applied research laboratories industries and clinical centers with the aim of achieving an efficient transfer of know how and technology for the improvement of both investigation possibilities and health care On one hand such an effort requires an ever increasing commitment of human and financial resources at

research and industrial level and on the other it meets serious difficulties in recruiting the necessary human expertise oriented to this technology which breaks with the traditional academic borders of the single disciplines Furthermore the scientific community is continually dealing with the problem of increasing the performance and at the same time complexity and costs of instruments applying more and more sophisticated technology in an effort to meet the demand for more complete and accurate clinical information The scientific program of this ASI and the qualification of the authors reveals the intrinsic complexity of the development process of the Imaging methodologies
