Revolution For Nature:

Revolution for Nature Klaus Michael Meyer-Abich, 1993 Nature's Web Peter Marshall, 2015-02-12 This powerful book provides the first comprehensive overview of the intellectual roots of the worldwide environmental movement from ancient religions and philosophies to modern science and ethics and synthesizes them into a new philosophy of nature in which to ground our moral values and social action It traces the origins and evolution of the dominant worldview that has built our industrial technocratic man centered civilization and brought us to the current ecological crisis At the same time it uncovers an alternative cultural tradition in the world s different religions and philosophies and describes how these ideas are now surfacing and coalescing to form an ecological sensibility and a new vision of nature which recognizes the inter relatedness of all living things Finally this book integrates these varied traditions with modern physics and the science of ecology into a larger philosophical whole that provides the environmental movement with a comprehensive vision of an organic and sustainable society in harmony with nature As ecological disasters continue to threaten our planet becoming worse with every passing moment of indifference it has become clear that we must take action We must change our relationship with nature and return to the days when our lives were intimately connected to and dependent upon the natural world Nature s Web lays the foundations for that change by explaining where our complex ideas about nature come from why they are wrong and what we can do to change them **Religion and the Order of Nature** Seyyed Hossein Nasr, 1996 Nasr argues that the current ecological crisis has been exacerbated by the reductionist view of nature that has been advanced by modern secular science What is needed he believes is the recovery of the belief that nature is sacred **Counterrevolution and Revolt** Herbert Marcuse, 1989-01-25 In this book Herbert Marcuse makes clear that capitalism is now reorganizing itself to meet the threat of a revolution that if realized would be the most radical of revolutions the first truly world historical revolution Capitalism s counterrevolution however is largely preventive and in the Western world altogether preventive Yet capitalism is producing its own grave diggers and Marcuse suggests that their faces may be very different from those of the wretched of the earth The future revolution will be characterized by its enlarged scope for not only the economic and political structure not only class relations but also humanity s relation to nature both human and external nature tend toward radical transformation For the author the liberation of nature is the connecting thread between the economic political and the cultural revolution between changing the world and personal emancipation *The Decline of Nature* Gilbert LaFreniere, Gilbert F. LaFreniere, 2008 An environmental history of ideas embedded in a compact account of Western civilization s ecological impact upon the planet particularly in Europe and its colonies Design and Nature Kate Fletcher, Louise St. Pierre, Mathilda Tham, 2019-09-09 Organised as a dialogue between nature and design this book explores design ideas opportunities visions and practices through relating and uncovering experience of the natural world Presented as an edited collection of 25 wide ranging short chapters the book explores the possibility of new relations between design

and nature beyond human mastery and understandings of nature as resource and by calling into question the longstanding role for design as agent of capitalism The book puts forward ways in which design can form partnerships with living species and examines designers capacities for direct experience awe integrated relationships and new ways of knowing It covers New design ethics of care Indigenous perspectives Prototyping with nature Methods for new design and nature relations A history of design and nature Animist beliefs De centering human centered design Understanding nature has power and agency Design and Nature A Partnership is a rich resource for designers who wish to learn to engage with sustainability from the ground up

Dialectic of Romanticism Peter Murphy, David Roberts, 2005-10-01 Dialectic of Romanticism presents a radical new assessment of the aesthetic and philosophical history and future of modernity An exploration of the internal critique of modernism treats romanticism later historicism and post modernism as central to the development of European modernism alongside enlightenment and like the enlightenment subject to its own dead ends and fatalities An external critique of modernism recovers concepts of civilization and civic aesthetics which are trans historical simultaneously modern and classically inspired and provides a counter both to romantic historicism and enlightened models of progress Finally a retrospective critique of modernism analyses what happens to modernism s romantic archaic and technological futurist visions when they are translated from Europe to America Dialectic of Romanticism argues that out of the European dialectic of romanticism and enlightenment a new dialectic of modernity is emerging in the New World one which points beyond modernism and postmodernism

On the Nature of Cities Kenneth Schneider, 2003-12 Why as more and more people inhabit cities are individuals and families increasingly isolated and alienated from the world around them Why do private living conditions materially improve while public settings neighborhoods and city centers rapidly deteriorate Why do American cities consume more land than any other cities in the world yet exist without true spaciousness and strangle in congestion Why has desire for private single family homes worked against the development of effective urban systems In his original analysis of modern American cities Kenneth Schneider carefully evaluates the causes and effects of these paradoxes Schneider shows that current city conditions are destructive to the happiness and well being of people and demonstrates that much of the failure of cities stems from their basic form and structure from outmoded traditions of citymaking and from persistent urban policies based on economic growth and technological development He present a new approach to the understanding of cities ecological humanism that combines concern for the well being of both the city habitat and its inhabitants and thus provides one of the first genuinely social bases for reorganizing cities and their institutions

Nature's Wonders Richard Newton, 1872 God and Nature Curtis L. Thompson, Joyce M. Cuff, 2012-03-29 The current religion and science dialogue begs for greater clarity on the relation of God to nature In God and Nature two scholars who embrace contemporary insights from science and religion explore the complexities of this debate As the narrative unfolds classical and contemporary thinkers are engaged as discussion partners in articulating a philosophical theology of nature Conceptual pairs in which two concepts play off of each other provide the structure for each of the seven chapters with usually the first concept being more scientific in character and the second more religious in tone These pairs of concepts from chronology and creation to creativity and creator help to thematize and structure the progressing narrative Within each chapter the two concepts are first investigated independently then interdependently and finally in relation to the divine At the story's completion nature has emerged as alive with possibility that is as alluring as the actuality it evokes Envisioned is a divine Creator who works in and through the possibility of creation to lure it into fuller manifestations via creative transformation
