Noise as a Constructive Element in Music Mark Delaere,2022-09-12 Music and noise seem to be mutually exclusive Music is generally considered as an ordered arrangement of sounds pleasing to the ear and noise as its opposite chaotic ugly aggressive sometimes even deafening When presented in a musical context noise can thus act as a tool to express resistance to predominant cultural values to society or to socioeconomic structures including those of the music industry The oppositional stance confirms current notions of noise as something which is destructive a belief not only cherished by hard core rock bands but also shared by engineers and companies developing devices to suppress or reduce noise in our daily environment In contrast to the common opinions on noise just described this volume seeks to explore the constructive potential of noise in contemporary musical practices Rather than viewing noise as a defect this volume aims at studying its aesthetic and cultural potential Within the noise music study field most recent publications focus on subgenres such as psychedelic post rock industrial hard core punk trash or rave as they developed from rock and popular music This book includes work on avant garde music developed in the domain of classical music as well In addition to already well established social historical and aesthetical perspectives on noise and noise music this volume offers contributions by music analysts
