New Geographies of the American West William Riebsame Travis, 2007-05-11

Reconciling explosive growth with often majestic landscape defines *New Geographies of the American West* Geographer William Travis examines contemporary land use changes and development patterns from the Mississippi to the Pacific and assesses the ecological and social outcomes of Western development Unlike previous boom periods dependent on oil or gold the modern population explosion in the West reflects a sustained passion for living in this specific landscape But the encroaching exurbs ranchettes and ski resorts are slicing away at the very environment that Westerners cherish Efforts to manage growth in the West are usually stymied at the state and local levels Is it possible to improve development patterns within the West's traditional anti planning pro growth milieu or is a new model needed Can the region develop sustainably protecting and managing its defining wildness while benefiting from it too Travis takes up the challenge suggesting that

functional and attractive settlement can be embedded in preserved lands working landscapes and healthy ecologies
