Physics And Technology Of Submicron Structures Springer Series In Solidstate Sciences Volume 83:

Physics and Technology of Heterojunction Devices Institution of Electrical Engineers,1991 This book brings together developments in both the physics and engineering of semiconductor devices Much attention is paid to so called band gap engineering which is enabling new and higher performance devices to be researched and introduced

Physics and Technology of Submicron Structures Österreichische Physikalische Gesellschaft,1988-10-12 This volume presents a discussion of the latest results in the physics of low dimensional structures At the winter school major breakthroughs were reported and some of the excitement of the participants is reflected in the contributions The topics treated range from the fabrication of microstructures and the physical background of future semiconductor devices to vertical transport in nanostructures universal conductance fluctuations and the transition from two dimensional to one dimensional conduction in semiconductor structures

Electronic Properties of Multilayers and Low-Dimensional Semiconductor Structures J.M. Chamberlain,L. Eaves,J.C. Portal,2012-12-06 This Advanced Study Institute on the Electronic Properties of Multilayers and Low Dimensional Semiconductor Structures focussed on several of the most active areas in modern semiconductor physics These included resonant tunnelling and superlattice phenomena and the topics of ballistic transport quantised conductance and anomalous magnetoresistance effects in laterally gated two dimensional electron systems Although the main emphasis was on fundamental physics a series of supporting lectures described the underlying technology Molecular Beam Epitaxy Metallo Organic Chemical Vapour Deposition Electron Beam Lithography and other advanced processing technologies Actual and potential applications of low dimensional structures in optoelectronic and high frequency devices were also discussed The ASI took the form of a series of lectures of about fifty minutes duration which were given by senior researchers from a wide range of countries Most of the lectures are recorded in these Proceedings The younger members of the Institute made the predominant contribution to the discussion sessions following each lecture and in addition provided most of the fifty five papers that were presented in two lively poster sessions The ASI emphasised the impressive way in which this research field has developed through the fruitful interaction of theory experiment and semiconductor device technology Many of the talks demonstrated both the effectiveness and limitations of semiclassical concepts in describing the quantum phenomena exhibited by electrons in low dimensional structures

Physics Of Semiconductors - Proceedings Of The 20th International Conference (In 3 Volumes) E M Anastassakis,John D Joannopoulos,1990-11-29 Gathering top experts in the field the 20th ICPS proceedings reviews the progress in all aspects of semiconductor physics The proceedings will include state of the art lectures with special emphasis on exciting new developments It should serve as excellent material for researchers in this and related fields

Science and Engineering of One- and Zero-Dimensional Semiconductors Steven P. Beaumont,Clivia M. Sotomayor Torres,2012-12-06 This volume comprises the proceedings of the NATO Advanced Research Workshop on the Science and Engineering of 1 and 0 dimensional semiconductors held at the University of Cadiz

from 29th March to 1st April 1989 under the auspices of the NATO International Scientific Exchange Program There is a wealth of scientific activity on the properties of two dimensional semiconductors arising largely from the ease with which such structures can now be grown by precision epitaxy techniques or created by inversion at the silicon silicon dioxide interface Only recently however has there burgeoned an interest in the properties of structures in which carriers are further confined with only one or in the extreme zero degrees of freedom This workshop was one of the first meetings to concentrate almost exclusively on this subject that the attendance of some forty researchers only represented the community of researchers in the field testifies to its rapid expansion which has arisen from the increasing availability of technologies for fabricating structures with small enough sub $0.1 \mu\text{m}$ dimensions Part I of this volume is a short section on important topics in nanofabrication It should not be assumed from the brevity of this section that there is little new to be said on this issue rather that to have done justice to it would have diverted attention from the main purpose of the meeting which was to highlight experimental and theoretical research on the structures themselves

Nanostructured Systems, 1992-04-08 This is the first available volume to consolidate prominent topics in the emerging field of nanostructured systems Recent technological advancements have led to a new era of nanostructure physics allowing for the fabrication of nanostructures whose behavior is dominated by quantum interference effects This new capability has enthused the experimentalist and theorist alike Innumerable possibilities have now opened up for physical exploration and device technology on the nanoscale This book with contributions from five pioneering researchers will allow the expert and novice alike to explore a fascinating new field Provides a state of the art review of quantum scale artificially nanostructured electronic systems Includes contributions by world known experts in the field Opens the field to the non expert with a concise introduction Features discussions of Low dimensional condensed matter physics Properties of nanostructured ultrasmall electronic systems Mesoscopic physics and quantum transport Physics of 2D electronic systems

Theoretical Physics at the End of the Twentieth Century Yvan Saint-Aubin, Luc Vinet, 2002 The Centre de recherches mathématiques CRM was created in 1968 by the Université de Montréal to promote research in the mathematical sciences It is now a national institute that hosts several groups and holds special theme years summer schools workshops and a postdoctoral program The focus of its scientific activities ranges from pure to applied mathematics and includes statistics theoretical computer science mathematical methods in biology and life sciences and mathematical and theoretical physics The CRM also promotes collaboration between mathematicians and industry It is subsidized by the Natural Sciences and Engineering Research Council of Canada the Fonds FCAR of the Province de Québec and the Canadian Institute for Advanced Research and has private endowments Current activities fellowships and annual reports can be found on the CRM Web page at www.CRM.UMontreal.CA The CRM Series in Mathematical Physics includes monographs lecture notes and proceedings based on research pursued and events held at the Centre de recherches mathématiques

Spectroscopy of Semiconductor Microstructures Gerhard Fasol, Annalisa

Fasolino, Paolo Lugli, 2013-06-29 Proceedings of a NATO ARW held in Venice Italy May 9 13 1989 Confined Electrons and Photons Elias Burstein, Claude Weisbuch, 2012-12-06 The optical properties of semiconductors have played an important role since the identification of semiconductors as small bandgap materials in the thirties due both to their fundamental interest as a class of solids having specific optical properties and to their many important applications On the former aspect we can cite the fundamental edge absorption and its assignment to direct or indirect transitions many body effects as revealed by exciton formation and photoconductivity On the latter aspect large scale applications such as LEDs and lasers photovoltaic converters photodetectors electro optics and non linear optic devices come to mind The eighties saw a revitalization of the whole field due to the advent of heterostructures of lower dimensionality mainly two dimensional quantum wells which through their enhanced photon matter interaction yielded new devices with unsurpassed performance Although many of the basic phenomena were evidenced through the seventies it was this impact on applications which in turn led to such a massive investment in fabrication tools thanks to which many new structures and materials were studied yielding further advances in fundamental physics Nonlinear Dynamics in Solids Harry Thomas, 2012-12-06 This volume contains the notes of lectures given at the school on Nonlinear Dynamics in Solids held at the Physikzentrum Bad Honnef 2 6 October 1989 under the patronage of the Deutsche Physikalische Gesellschaft Nonlinear dynamics has become a highly active research area owing to many interesting developments during the last three decades in the theoretical analysis of dynamical processes in both Hamiltonian and dissipative systems Research has been focused on a variety of problems such as the characteristics of regular and chaotic motion in Hamiltonian dynamics the problem of quantum chaos the formation and properties of solitary spatio temporal structures the occurrence of strange attractors in dissipative systems and the bifurcation scenarios leading to complex time behaviour Until recently predictions of the theory have been tested predominantly on instabilities in hydrodynamic systems where many interesting experiments have provided valuable input and have led to a fruitful interaction between experiment and theory Fluid systems are certainly good candidates for performing clean experiments free from disturbing influences with fluids compared to solids it is simpler to prepare good samples the relevant length and time scales are in easily accessible ranges and it is possible to do measurements inside the fluid because it can be filled in after the construction of the apparatus Further the theory describing the macroscopic dynamics of fluids is well established and contains only very few parameters all of which have well known values
