Geoffrey J. D. Hewings, 2017-09-05 Originally published in 1977 This book provides an introduction to some of the more important techniques of regional analysis techniques derived from geographical regional economic and regional science theory and describes the way some of these techniques have been applied in the identification of problems development of strategy and evaluation of regional programmes The theory and applications of methods of regional analysis are integrated with the use of examples taken from the USA the UK and Canada The author introduces the problems which are encountered in the field of regional analysis describes some of the analytical tools beginning with the fundamental model of the economic base approach and then examines regional flows and the applicability of international trade theory to interregional trade Considering the shortcomings of the aggregated base approach input output analysis is also examined

Regional Economic Problems A. J. Brown, E. M. Burrows, 2017-08-25 Originally published in 1977 This book provides the first concise non technical account of what the main kinds of regional problems are how they arise and the kinds of policy which have been used to tackle them in the UK USA and Western Europe The book starts with a discussion of why regional problems really are situations which call for special action followed by a short preliminary classification of problem regions including those in the less developed countries then on to a more detailed survey of the origins and experience of selected problem regions in the more developed market economies The authors focus on four broad kinds of problem region agricultural regions coal mining regions old textile regions and so called congested regions They conclude with a selective survey of regional policies in these more advanced economies distinguishing and comparing the main trends and the different national styles

Regional Economic Policy and Its Analysis Harvey Armstrong, Jim Taylor, 1978

Regional Science David Boyce, Peter Nijkamp, Daniel Shefer, 2012-12-06 Regional science as an integrating discipline for many scientific analyses concerning the element of space has a remarkable record of achievements in both breadth and depth The great many scientific journals in this field and the large number of regional science books mirror the appeal of this discipline in both the developed and the developing world The scientific organization in this area the Regional Science Association International is organizing a world conference every four years The 1989 Regional Science World Conference was held in an interesting setting viz kibbutz Ramat Rachel on the outskirts of Jerusalem The organization of this meeting was undertaken by the Israeli Section of the Regional Science Association under the supervision of Professor Rafi Bar EI Development Study Center Rehovoth The meeting turned out to be a great success and provided an extremely interesting cross section of new developments in the area of regional science It was decided afterward to publish a set of representative papers from this meeting in one volume The present book brings together these papers which were duly selected after a careful screening and refereeing process The editors wish to thank all referees for their willingness to assist them in the task of producing this

volume Many thanks also go to Rita Hittema for her skillful copy editing and word processing of the manuscript *The Economics of Non-Wage Labour Costs (Routledge Revivals)* Bob Hart, 2010-07-19 Throughout the OECD 30% of the average firm's total labour costs comprises items which are other than direct remuneration This reissue first published in 1984 focuses upon these non wage labour costs which include fringe benefit payments obligatory social welfare contributions holiday entitlements and expenditures on recruitment and training seeking to make amends for the woeful lack of consideration given to these important factors in previous wage literature The book focuses on two major areas of enquiry firstly the costs for the cyclical behaviour of employment and secondly the role of average working hours per employee in the firm's overall allocation of labour services The author begins with an empirical survey and costs breakdown followed by extensive data on Japan the UK the USA and West Germany The ensuing analysis considers the question as to why firms incur the various non wages and a comparative static factor demand model is constructed which accommodates the major cost items Economic Report of the President Transmitted to the Congress United States. President, 1988 Reports for 2002 include The Annual report of the Council of Economic Advisers **Contemporary Issues in Economics** Association of University Teachers of Economics, 1975 **Handbook of Regional and Urban Economics** P. Nijkamp, Edwin S. Mills, P. C. Cheshire, 1986 This second volume of the Handbook presents professional surveys of all the important topics in urban economics The first section contains 6 surveys on locational analysis the second 5 surveys of specific urban markets and the third part presents 5 surveys of government policy issues The book brings together exhaustive research by distinguished scholars from many countries It is the only complete survey volume of urban economics and should serve as a reference volume to scholars and graduate students for many years For more information on the Handbooks in Economics series please see our home page on <http://www.elsevier.nl> locate hes **European Regional Growth** Bernard Fingleton, 2013-06-29 Looking into the future and trying to visualize long run regional disparities is difficult There is no agreed single theory to guide our model building although some insight can be gained from analysis of the past and by looking at the different theoretical positions to see if there is any agreement at least in terms of outcome if not in terms of mechanism This is what is attempted in this book which brings together specialists with a common interest in European regional growth and in applying quantitative analytical and simulation techniques in order to provide different perspectives on the topic Many of the Chapters in the book employ the methods of spatial econometrics Spatial econometrics is a suite of statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio economic theories and which can be represented most informatively in mapped form These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development In particular they provide the means by which to analyze spatially indexed data where the time dimension is essentially suppressed because for instance the variables of interest are

not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries
